

AFFIDAVIT OF NATHANIEL E FRANK-WHITE

1. I am a Records Request Processor at the Internet Archive. I make this declaration of my own personal knowledge.
2. The Internet Archive is a website that provides access to a digital library of Internet sites and other cultural artifacts in digital form. Like a paper library, we provide free access to researchers, historians, scholars, and the general public. The Internet Archive has partnered with and receives support from various institutions, including the Library of Congress.
3. The Internet Archive has created a service known as the Wayback Machine. The Wayback Machine makes it possible to browse more than 450 billion pages stored in the Internet Archive's web archive. Visitors to the Wayback Machine can search archives by URL (i.e., a website address). If archived records for a URL are available, the visitor will be presented with a display of available dates. The visitor may select one of those dates, and begin browsing an archived version of the Web. Links on archived files in the Wayback Machine point to other archived files (whether HTML pages or other file types), if any are found for the URL indicated by a given link. For instance, the Wayback Machine is designed such that when a visitor clicks on a hyperlink on an archived page that points to another URL, the visitor will be served the archived file found for the hyperlink's URL with the closest available date to the initial file containing the hyperlink.
4. The archived data made viewable and browsable by the Wayback Machine is obtained by use of web archiving software that automatically stores copies of files available via the Internet, each file preserved as it existed at a particular point in time.
5. The Internet Archive assigns a URL on its site to the archived files in the format `http://web.archive.org/web/[Year in yyyy][Month in mm][Day in dd][Time code in hh:mm:ss]/[Archived URL]` aka an "extended URL". Thus, the extended URL `http://web.archive.org/web/19970126045828/http://www.archive.org/` would be the URL for the record of the Internet Archive home page HTML file (`http://www.archive.org/`) archived on January 26, 1997 at 4:58 a.m. and 28 seconds (1997/01/26 at 04:58:28). The date indicated by an extended URL applies to a preserved instance of a file for a given URL, but not necessarily to any other files linked therein. Thus, in the case of a page constituted by a primary HTML file and other separate files (e.g., files with images, audio, multimedia, design elements, or other embedded content) linked within that primary HTML file, the primary HTML file and the other files will each have their own respective extended URLs and may not have been archived on the same dates.
6. Attached hereto as Exhibit A are true and accurate copies of browser screenshots of the Internet Archive's records of the archived files for the URLs and the dates specified in the attached coversheet of each printout.

7. I declare under penalty of perjury under the laws of the United States of America that the foregoing is true and correct.

DIY Natural Homemade Deodorant Recipe

Posted by Rebecca D. Dillon | Tuesday, October 16, 2012 |

I've been wanting to try my hand for a while and make an all natural homemade deodorant, but I've always had doubts about whether it would really work or not. But this past weekend I finally caved and made a batch of my own handmade natural deodorant AND I tested it out by wearing it to work today. Did it work? Yes, indeed, it did. And I stayed dry. Though on a hot day, I'd probably be safe rather than sorry and carry a tin of this with me to reapply mid-day. Following is the recipe I came up with.

DIY Natural Homemade Deodorant Recipe

© Rebecca's Soap Delicatessen

Ingredients:

- 4 oz. [baking soda](#)
- 2 oz. [certified organic arrowroot powder](#)
- 1.5 oz. [certified organic cocoa butter](#)
- 1 oz. [organic fractionated coconut oil](#) or [certified organic coconut oil](#)
- 1 mL [certified organic lavender essential oil](#)
- 5 drops [certified organic tea tree oil](#)

Directions:

Weigh out the baking soda and arrowroot powder using a digital scale and combine in a glass bowl. In a separate container, weigh out the cocoa butter and melt at reduced heat in your microwave or in a double boiler on the stove. Then, weigh out the fractionated coconut oil (or coconut oil) and stir into the liquified cocoa butter. The heat of the melted cocoa butter should be enough to melt the coconut oil if using a solid. If not, you can heat it briefly to finish melting it completely. I like to use fractionated coconut oil because it absorbs into skin so well and doesn't leave a greasy feeling - especially important when applying deodorant. Next, use a [graduated plastic pipette](#) to measure out your lavender essential oil and stir into the cocoa butter and coconut oil mixture. Follow with 5 drops of tea tree oil and stir well.

Finally, pour the liquid mixture into your dry mix of arrowroot powder and baking soda. Mix thoroughly then pour into containers of your choice. I was able to fill three - 2 oz. plastic jars with 2.7 oz. each of deodorant, though this natural homemade deodorant is solid enough you can fill an empty deodorant container.

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
