POCKET BRA SYSTEM

APPLICATION

FOR UNITED STATES LETTERS PATENT

SPECIFICATION

TO ALL WHOM IT MAY CONCERN:

BE IT KNOWN THAT I, SHARON J. GOFF, a citizen of the UNITED STATES OF AMERICA, have invented new and useful improvements in a POCKET BRA SYSTEM of which the following is a specification:

POCKET BRA SYSTEM

BACKGROUND OF THE INVENTION

Related Application

The present application is a continuation-in-part of pending Application Number 13/066,822 filed 04/26/2011, the subject matter of which is incorporated herein by reference.

Field of the Invention

The present invention relates to a pocket bra system and more particularly pertains to removably receiving a handheld electronic device while providing support and shape to the breasts of a wearer, the receiving and supporting and shaping being done in a safe, convenient and economical manner.

SUMMARY OF THE INVENTION

In view of the disadvantages inherent in the known types of bra systems of known designs and configurations now present in the prior art, the present invention provides an improved pocket bra system. As such, the general purpose of the present invention, which will be described subsequently in greater detail, is to provide a new and improved pocket bra system and method which has all the advantages of the prior art and none of the disadvantages.

To attain this, the present invention essentially comprises a pocket bra system. First provided is a strap assembly which includes a chest strap and shoulder straps. Similarly configured

left and right cups are provided. The strap assembly is attached to the cups whereby the strap assembly adheres the cups to a wearer. Each cup has curved upper, lower, interior and exterior edges. Each cup has inside and outside surfaces. A patch is operatively associated with each cup. Each patch has a linear upper edge and curved lower, interior and exterior edges. Each patch has inside and outside surfaces. Stitching couples the lower, interior and exterior edges of each patch to the lower, interior and exterior edges of an associated cup. A linear opening is formed along the upper edge of each patch. Piping covers the upper edge of each patch. The piping is adapted to allow the patch to move away from and back toward the cup between open and closed orientations.

There has thus been outlined, rather broadly, the more important features of the invention in order that the detailed description thereof that follows may be better understood and in order that the present contribution to the art may be better appreciated. There are, of course, additional features of the invention that will be described hereinafter and which will form the subject matter of the claims attached.

In this respect, before explaining at least one embodiment of the invention in detail, it is to be understood that the invention is not limited in its application to the details of construction and to the arrangements of the components set forth

in the following description or illustrated in the drawings. The invention is capable of other embodiments and of being practiced and carried out in various ways. DESCRIPTION OF THE PREFERRED EMBODIMENT

With reference now to the drawings, and in particular to Figure 1 thereof, the preferred embodiment of the new and improved pocket bra system embodying the principles and concepts of the present invention and generally designated by the reference numeral 10 will be described.

The present invention, the pocket bra system 10 is comprised of a plurality of components. Such components in their broadest context include a strap, left and right cups, a rectangular patch and a linear slit. Such components are individually configured and correlated with respect to each other so as to attain the desired objective.

First provided is a strap assembly. The strap assembly includes a generally horizontal chest strap 14. The chest strap is positionable around the chest and back of a wearer. The strap assembly includes left and right generally vertical shoulder straps 16. The shoulder straps are positionable over the shoulders of the wearer. The shoulder straps have free ends. The free ends are coupled to the chest strap adjacent to the chest of the wearer and adjacent to the back of the wearer.

A left cup 18 is provided. A similarly configured right cup 20 is provided. Each cup has an inside surface and an outside surface. The left and right cups each have an upper-most point 22. The left and right cups each have a lower-most point 24. A generally vertical axis is provided. The vertical axis divides each cup into an inner hemisphere interiorly and an outer hemisphere exteriorly. The left and right cups each have an inner-most point 26. The left and right cups each have an outer-most point 28. A generally horizontal axis is provided. The horizontal axis divides each cup into an upper hemisphere above and a lower hemisphere below.

A rectangular patch 32 is provided next. The patch is operatively associated with each cup. Each patch has generally horizontal upper and lower edges. Each patch has generally vertical interior and exterior edges. The patch has a periphery. The periphery has stitching. In this manner the periphery of

each patch is coupled to the inside surface of an associated cup. The majority of each patch is in the upper hemisphere. The majority of each patch is in the outer hemisphere. A rectangular chamber 34 is provided. The chamber is provided between each patch and its associated cup. The chamber is rectangular. The chamber has a height of 120 and 140 millimeters. The chamber has a width of between 60 and 70 millimeters. The pockets are fabricated of a resilient closed cell polyurethane foam. The foam has a thickness of from 2 to 4 millimeters. The patches are fabricated of an elastic fabric.

Further provided is a linear slit 38. The slit is provided in each patch. The slit is provided parallel with, and closely spaced from, the upper edge of each patch. Each slit has a length greater than 90 percent of the width of the chamber. An elastic band 40 is provided. The elastic band is provided within each patch. The elastic band surrounds the slit. The elastic band is adapted to return the slit to a closed orientation. The elastic band is further adapted to allow the slit to stretch to an enlarged orientation.

Provided last is a handheld electronic device 46. The handheld electronic device is positionable within the chamber. The handheld electronic device has a height of 115 millimeters, plus or minus 10 percent. The handheld electronic device has a width of 59 millimeters. The handheld electronic device has a

thickness of 9 millimeters plus or minus 10 percent. The slit is adapted to stretch to the open orientation when adding the handheld device to, or removing the handheld device from, the chamber. The slit is adapted to contract to the closed orientation when the handheld device is within or without the chamber. The thickness and the material of the cups and the patches are adapted to abate inward projections by the handheld devices in the chambers tending to poke a user. The thickness and the material of the cups and the patches are adapted to abate outward projections by the handheld devices in the chambers tending to create unsightly projections.

An alternate embodiment 100 of the present invention is provided. An under-wire 104 is provided. The under-wire is provided beneath each cup.

A central patch 108 is provided. The central patch is provided intermediate the cups. In this manner a central chamber is formed. The central patch has horizontal upper and lower edges 110, 112. The central patch has vertical side edges 114, 116. The upper and lower edges are longer than the side edges. The central patch has a central slit 118. The central slit is provided parallel with and in proximity to the upper edge. The central chamber is adapted to receive and support keys.

An upper patch 120 is provided on each shoulder strap. The upper patches have horizontal upper and lower edges 122, 124. The upper patches have vertical side edges 126, 128. The upper and lower edges are shorter than the side edges. The upper patches each have an upper slit 130. The upper slit is provided parallel with and in proximity to the upper edge. The upper chambers are adapted to receive and support pills.

Figures 9 through 12 illustrate a system 200 constructed in accordance with another alternate embodiment of the invention. In such alternate embodiment, enlarged bra pockets 202 are constructed on the cups of the bra. In addition, side pockets 204 are constructed along both sides of the bra. Although only a right side pocket is illustrated, it should be understood that a similarly constructed left side pocket is preferably provided additionally.

As shown in Figures 9 and 10, there is illustrated a pocket bra system 200 for removably receiving a handheld electronic device and other objects while providing support and shape to the breasts of a wearer. The system includes a strap assembly 214. The strap assembly is formed of a chest strap 216 and shoulder straps 218.

Next provided are similarly configured left and right cups 222, 224. Each cup has inside and outside surfaces. The strap assembly is attached to the cups whereby the strap assembly

adheres the cups to a wearer. Each cup has curved upper edge 226, a lower edge 228, an interior edge 230 and an exterior edge 232. Each cup has inside and outside surfaces.

A patch 236 is operatively associated with each cup. Each patch has a linear upper edge 238 and a curved lower edge 240, an interior edge 242 and an exterior edge 248. Each patch has inside and outside surfaces.

Stitching 250 couples the lower, interior and exterior edges of each patch to the lower, interior and exterior edges of an associated cup. A linear opening 252 is thus formed along the upper edge of each patch. Piping 256 covers the upper edge of each patch. The upper edge of the patch and the piping are adapted to allow the patch to move away from and back toward the cup between open and closed orientations.

Pockets 260 are formed between the patches and the cups. The cups are preferably fabricated of a resilient closed cell polyurethane foam with a thickness of from 2 to 4 millimeters. The patches are also preferably fabricated of a resilient closed cell polyurethane foam with a thickness of from 2 to 4 millimeters.

A handheld electronic device 46 is adapted to be placed within a pocket.

An under-wire 264 is coupled beneath each cup in a generally vertical plane.

Lastly provided is a side patch 268 on each side of the chest strap. The side patches each have a horizontal upper edge 270 and a lower edge 272 and vertical side edges 274. The upper and lower edges of each patch are longer than the side edges. The side patches include side stitching 276 along the lower and side edges. Thus is formed an upper opening 278 at each side patch.

As to the manner of usage and operation of the present invention, the same should be apparent from the above description. Accordingly, no further discussion relating to the manner of usage and operation will be provided.

With respect to the above description then, it is to be realized that the optimum dimensional relationships for the parts of the invention, to include variations in size, materials, shape, form, function and manner of operation, assembly and use, are deemed readily apparent and obvious to one skilled in the art, and all equivalent relationships to those illustrated in the drawings and described in the specification are intended to be encompassed by the present invention.

Therefore, the foregoing is considered as illustrative only of the principles of the invention. Further, since numerous modifications and changes will readily occur to those skilled in the art, it is not desired to limit the invention to the exact construction and operation shown and described, and accordingly,

all suitable modifications and equivalents may be resorted to,
falling within the scope of the invention.

PROTECTING YOUR INVENTION OUTSIDE THE UNITED STATES

Since the rights granted by a U.S. patent extend only throughout the territory of the United States and have no effect in a foreign country, an inventor who wishes patent protection in another country must apply for a patent in a specific country or in regional patent offices. Applicants may wish to consider the filing of an international application under the Patent Cooperation Treaty (PCT). An international (PCT) application generally has the same effect as a regular national patent application in each PCT-member country. The PCT process **simplifies** the filing of patent applications on the same invention in member countries, but **does not result** in a grant of "an international patent" and does not eliminate the need of applicants to file additional documents and fees in countries where patent protection is desired.

Almost every country has its own patent law, and a person desiring a patent in a particular country must make an application for patent in that country in accordance with its particular laws. Since the laws of many countries differ in various respects from the patent law of the United States, applicants are advised to seek guidance from specific foreign countries to ensure that patent rights are not lost prematurely.

Applicants also are advised that in the case of inventions made in the United States, the Director of the USPTO must issue a license before applicants can apply for a patent in a foreign country. The filing of a U.S. patent application serves as a request for a foreign filing license. The application's filing receipt contains further information and guidance as to the status of applicant's license for foreign filing.

Applicants may wish to consult the USPTO booklet, "General Information Concerning Patents" (specifically, the section entitled "Treaties and Foreign Patents") for more information on timeframes and deadlines for filing foreign patent applications. The guide is available either by contacting the USPTO Contact Center at 800-786-9199, or it can be viewed on the USPTO website at <http://www.uspto.gov/web/offices/pac/doc/general/index.html>.

For information on preventing theft of your intellectual property (patents, trademarks and copyrights), you may wish to consult the U.S. Government website, <http://www.stopfakes.gov>. Part of a Department of Commerce initiative, this website includes self-help "toolkits" giving innovators guidance on how to protect intellectual property in specific countries such as China, Korea and Mexico. For questions regarding patent enforcement issues, applicants may call the U.S. Government hotline at 1-866-999-HALT (1-866-999-4258).

LICENSE FOR FOREIGN FILING UNDER
Title 35, United States Code, Section 184
Title 37, Code of Federal Regulations, 5.11 & 5.15

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Bureau of Industry and Security, Department of Commerce (15 CFR parts 730-774); the Office of Foreign Assets Control, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

DETAILED ACTION

Notice of Pre-AIA or AIA Status

The present application, filed on or after March 16, 2013, is being examined under the first inventor to file provisions of the AIA.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on nonstatutory double patenting provided the reference application or patent either is shown to be commonly owned with the examined application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement. See

Art Unit: 3765

MPEP § 717.02 for applications subject to examination under the first inventor to file provisions of the AIA as explained in MPEP § 2159. See MPEP §§ 706.02(l)(1) - 706.02(l)(3) for applications not subject to examination under the first inventor to file provisions of the AIA. A terminal disclaimer must be signed in compliance with 37 CFR 1.321(b).

The USPTO Internet website contains terminal disclaimer forms which may be used. Please visit www.uspto.gov/patent/patents-forms. The filing date of the application in which the form is filed determines what form (e.g., PTO/SB/25, PTO/SB/26, PTO/AIA/25, or PTO/AIA/26) should be used. A web-based eTerminal Disclaimer may be filled out completely online using web-screens. An eTerminal Disclaimer that meets all requirements is auto-processed and approved immediately upon submission. For more information about eTerminal Disclaimers, refer to www.uspto.gov/patents/process/file/efs/guidance/eTD-info-l.jsp.

Claims 1-14 are rejected on the ground of nonstatutory double patenting as being unpatentable over claims 1-17 of U.S. Patent No. 9295288 and claims 1-21 of U.S. Patent No. 9808036. Although the claims at issue are not identical, they are not patentably distinct from each other because the same cup pocket structure is claimed as in claims 1-14.

Claims 1-14 will be allowed with the submission of the proper Terminal Disclaimers.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Remarks

Applicant thanks the Office for the attention accorded to the present application in the March 21, 2018 Office Action. Claims 1-14 were pending in the subject application.

Applicant respectfully traverses all rejections and asserts that the claims are now in condition for allowance.

Double Patenting Rejections

Claims 1-14 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-17 of U.S. Patent No. 9,295,288; and claims 1-21 of U.S. Patent No. 9,808,036.

Without assenting to the propriety of the rejection, Applicant has herein submitted a terminal disclaimer. As such, Applicant asserts that the double patenting rejection is now moot, and respectfully requests that Examiner remove this ground of rejection.

Conclusion

Applicant again thanks the Office for the attention accorded to the present Application in the March 22, 2018 office action. Applicant asserts that based on the comments presented herein, all of the pending claims are in condition for allowance. Early and favorable action is respectfully requested.

The Examiner is invited to telephone the undersigned, Applicant's attorney of record, to facilitate advancement of the present application.

Respectfully submitted,

/David J. Connaughton, Jr./

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(Applications filed on or after May 29, 2000)

The Office has discontinued providing a Patent Term Adjustment (PTA) calculation with the Notice of Allowance.

Section 1(h)(2) of the AIA Technical Corrections Act amended 35 U.S.C. 154(b)(3)(B)(i) to eliminate the requirement that the Office provide a patent term adjustment determination with the notice of allowance. See Revisions to Patent Term Adjustment, 78 Fed. Reg. 19416, 19417 (Apr. 1, 2013). Therefore, the Office is no longer providing an initial patent term adjustment determination with the notice of allowance. The Office will continue to provide a patent term adjustment determination with the Issue Notification Letter that is mailed to applicant approximately three weeks prior to the issue date of the patent, and will include the patent term adjustment on the patent. Any request for reconsideration of the patent term adjustment determination (or reinstatement of patent term adjustment) should follow the process outlined in 37 CFR 1.705.

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.
