(76) **Inventor: Laura Spagna, Greensboro, NC (US)**

An apparatus for holding an automated medication dispensing device includes an integrated pouch located in a woman's brassiere. By placing the integrated pouch either at the center front or center back of the brassiere, the dispensing device can be safely maintained, even while the wearer is active. By placing the dispensing device in the integrated pouch located at the front center of the brassiere, the dispensing device becomes unobtrusive as it is partially hidden by the women's breasts. Additionally, the placement of the dispensing device central to the long axis of the wearer prevents the weight of the dispensing device from pulling down on the wearer's clothing in an unbalanced manner. In this manner, a woman may wear an automated medication dispensing device, such as an insulin pump, while maintaining an active and sexy lifestyle.
