COMBINED DECLARATION AND POWER OF ATTORNEY

As a below named inventor, I hereby declare that:

My residence, post office address and citizenship are as stated below next to my name.

I believe I am the original, first and sole inventor (if only one name islisted below) or an original, first and joint inventor (if plural names are listed below) of the subject matter which is claimed and for which a patent is sought on the invention entitled PLAY CONTROL OF CONTENT ON A DISPLAY DEVICE, the specification of which:

[] is attached hereto.
[X] was filed on June 10, 2011 as Application Serial No. 13/157,821.
[] was described and claimed in PCT International Application No. _____ filed on _____ and as amended under PCT Article 19 on _____.

I hereby state that I have reviewed and understand the contents of the above-identified specification, including the claims, as amended by any amendment referred to above.

I acknowledge the duty to disclose to the United States Patent and Trademark Office all information known to me to be material to patentability as defined in 37 CFR 1.56, including for continuation-in-part applications, material information which became available between the filing date of the prior application and the national or PCT International filing date of the continuation-in-part application.

I hereby claim the benefit under Title 35, United States Code, §119(e)(1) of any United States provisional application(s) listed below:

U.S. Serial No.	Filing Date	Status
61/477,998	April 21, 2011	Pending

I hereby claim the benefit under Title 35, United States Code, §120 of any United States application(s) listed below and, insofar as the subject matter of each of the claims of this application is not disclosed in the prior United States application in the manner provided by the first paragraph of Title 35, United States Code, §112, I acknowledge the duty to disclose all information I know to be material to patentability as defined in Title 37, Code of Federal Regulations, §1.56(a) which became available between the filing date of the prior application and the national or PCT international filing date of this application:

U.S. Serial No.	Filing Date	Status

I hereby claim foreign priority benefits under Title 35, United States Code, §119 of any foreign application(s) for patent or inventor's certificate or of any PCT international application(s) designating at least one country other than the United States of America listed below and have also identified below any foreign application for patent or inventor's certificate or any PCT international application(s) designating at least one country other than the United States of America filed by me on the same subject matter having a filing date before that of the application(s) of which priority is claimed:

Country	Application No.	Filing Date	Priority Claimed
			[] Yes [] No
			[] Yes [] No

Combined Declaration and Power of Attorney

I hereby appoint the following attorneys and/or agents to prosecute this application and to transact all business in the Patent and Trademark Office connected therewith: **all attorneys and/or patent agents associated with PTO Customer No. 26211.**

Direct all telephone calls to SAMUEL BORODACH at telephone number (212) 765-5070.

Direct all correspondence to the following:

26211
PTO Customer Number

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patents issued thereon.

Full Name of Inventor: DAVID STROBER

PLAY CONTROL OF CONTENT ON A DISPLAY DEVICE

CROSS-REFERENCE TO RELATED APPLICATION(S)

This application is a continuation of U.S. Application No. 13/157,821, filed on June 10, 2011, which in turn claims the benefit of priority of U.S. Provisional Patent Application No. 61/477,998, filed on April 21, 2011.

BACKGROUND

This disclosure relates to play control of content on a display device. Such display devices include, for example, television displays used by consumers in their home for viewing videos and other media that are either provided from the Web or previously stored. In particular, the disclosure relates to the creation, storage, manipulation and access of media playlists used in conjunction with display devices and control of the display devices.

Web media often is played on computers rather than television displays. Although it is known to connect a computer to a television set in order to watch Web media, it is difficult to control such a system within the typical scenario for television watching where the viewer is positioned some distance from the television. Furthermore, although a wireless device can enable the user to control the television from a distance, it can be difficult to view a web browser display on the television set and may interfere with normal television program viewing by other persons.

Given the desire to watch various World Wide Web media on a family's primary television set, and to control this operation from the comfort of one's couch, there is a need to operate a television set or other display remotely from a personal computing device, such as a mobile phone. It also is desirable to allow a user to perform a general Web search to locate and capture Web media, and to control a television or other display remotely using the personal computing device.

SUMMARY

Various aspects of the invention are set forth in the claims.

For example, according to one aspect, a system for presenting and controlling content on a display device includes a network, a server system coupled to the network and comprising one or more servers, a display device coupled to the network and having a display, and a personal computing device operable to transmit a first message according to a specified format over the network to the server system. The server system stores an association between the personal computing device and the display device. The first message identifies user-selected content and a media player to play the content. The server system is operable, in response to receiving the first message from the personal computing device, to provide to the display device a second message identifying the user-selected content and the media player to play the content. In response to receiving the second message, the display device is operable to obtain a first media player needed to play the content, to load the media player and to present the content on the display.

In some implementations, the display device is operable, in response to receiving the second message, to obtain the first media player from the content provider only if the first media player is not already loaded in the display device.

In some implementations, the personal computing device is operable to transmit a message according to a specified format over the network to the server system. The message can include a command for controlling playing of the content on the display device. The server system is operable, in response to receiving the message, to convert the command into a corresponding command recognizable by the media player if the command received from the personal computing device is not recognizable by the media player. The server system is operable to provide to the display device a message that includes the corresponding command, and the display device is operable, in response to receiving the message from the server system, to execute the command.

In some implementations, the personal computing device is, for example, a mobile phone, and the display device is a television set. Other personal computing devices or display devices can be used in other implementations. The network can include, for example, the Internet.

In some implementations, the server system stores a look-up table that includes a synchronization code uniquely associated with the display device. A message from the personal computing device can include the synchronization code, and in response to

receiving the message from personal computing device, the server system can use the synchronization code and the look-up table to identify the display device on which the content is to be played. The synchronization code can be different from an IP address associated with the display device and/or a media access control address associated with the display device.

In various implementations, the system can facilitate allowing a personal computing device to be used to select different content to be played on a remote display even if different media players are required to present the different content. The system also can allow the user to control how the content is displayed on the display device using the personal computing device. For example, user-initiated play commands can be passed from the user's personal computing device, through the server system, to the display device.

Other aspects, features and advantages will be apparent from the following detailed description, the accompanying drawings, and the claims.

BRIEF DECSRIPTION OF THE DRAWINGS

FIG. 1 is a block diagram illustrating an example of a system according to the invention.

FIG. 2 illustrates various details of the flow of information and signals according to some implementations.

FIG. 3 illustrates an example of a transmission code incorporated into a message from a personal computing device.

FIG. 4 illustrates an example of a look-up table that forms part of a server system.

FIG. 5 illustrates an example of entries in a universal API adapter.

FIG. 6 is a flow chart showing steps for display device to load a video player and video.

FIG. 7A illustrates an example of a display device including a synchronization code.

FIG. 7B illustrates an example of a synchronization code look-up table.

FIGS. 8-13 illustrate examples of various scenarios in which the invention can be used.

FIGS. 14A through 14E illustrate examples of display screens that may appear on a user's personal computing device in accordance with the invention.

FIG. 15 illustrates further information that can be stored in the look-up table in the server system.

DETAILED DESCRIPTION

As shown in FIG. 1, a system 10 facilitates synchronizing a connection between two or more devices 20, 22 connected to the Internet 21 or other computer network. The connection is designed to be made by a first device (e.g., a personal computing device) 20 that acts as a controller and a second device (e.g., a television set 22 with a display 23) that acts as a receiver to play content selected by a user of the first device and to respond to commands that originate at the personal computing device. The personal computing device 20 is operable to display an application or web site that contains information and links to content providers 30 on the Internet 21. The television set 22 is operable to link back to a server system 24 from which the television set receives commands. When a user makes a selection using the personal computing device 20 for particular content to be displayed on the television display 23, a signal is sent through the Internet (or other network) 21 to the server system 24. A corresponding command signal then is passed along to the connected television set 22, which acts on a transmission code contained within the signal and performs specified commands. For example, in some scenarios, the command instructs the television set 22 to access a content provider 30 through the Internet 21, load a specific media player, load the media player-specific content (e.g., a video) and play the content on the television display 23. The user can use the personal computing device 20 to control how the content is played on the television display 23. The user may subsequently visit the same or another Web site using the personal computing device 20 to select different content (e.g., a second video) to be played on the television display 23. In that case, another signal would be sent through the server system 24 to the television set 22. A transmission code associated with this command signal instructs the television set 22 to load a new media player (if needed) over the Internet and to load the specified video file to be played on the display 23. Thus, the system 10 allows a personal computing device 20 to be used to select different content to

be played on a remote display 23 even if different media players are required for the different content. The user also can control how the content is displayed (e.g., play, pause, stop, rewind, fast forward, etc.) on the display 23 using the personal computing device 20. The user-initiated play commands are passed from the user's personal computing device 20, through the server system 24, to the television set 22.

Although the following detailed discussion describes videos as an example of the type of content to be played on the display 23, the system 10 can be used for other types of content as well. Thus, depending on the implementation, the content may include one or more of the following: video, audio, interactive video game, streaming media, multimedia, images, slides (e.g., a PowerPoint presentation) or other types of dynamic content. Furthermore, in the following discussion, it is assumed that the personal computing device 20 is a mobile phone that includes a display, an internal microprocessor or other processing circuitry, a keypad, keyboard, touchscreen, mouse, trackball, or other device to receive user selections and other input, and a transceiver to establish communications to the Internet 21 or other communications networks. More generally, however, the personal computing device 20 can be any type of handheld or other Internet-enabled personal computing device, including personal computers, e-books, kiosks, tablets, smart phones, media players, and motion and touch sensory interfaces. In some cases, input from the user can be received in forms other than tactile input (e.g., acoustic or speech).

FIG. 2 illustrates further details of the flow of information and signals according to some implementations. The personal computing device (e.g., mobile phone) 20 is operable to display an application or web site that contains information and links to content providers 30 on the Internet 21. The user operates the mobile phone 20 so as to start the application or access the web site (block 100). In some implementations, a logo appears on the mobile phone's display. By selecting the logo, the user causes a menu to expand and present various options. The options can include, for example: (i) add new content to a playlist, (ii) play a listed item on a secondary device, (iii) play a listed item on the mobile phone 20. If the user selects to add new content to the playlist, the user is presented with a screen that allows him to enter user-defined search parameters or o select predefined search parameters to request video data. The search parameters are sent

from the mobile phone 20 as part of a request for video data that satisfy the search parameters (block 102). The request is transmitted via the Internet 21 and through the server system 24 to the appropriate content provider web site. In response, the content provider 30 provides metadata (e.g., titles, links to the videos) for one or more video files that satisfy the search parameters (block 104). The metadata can be provided to the mobile phone 20, for example, in the form of an XML data file. Upon receiving the data file, the mobile phone 20 displays a list of one or more videos based on the information received from the content provider 30 (block 106).

If desired, the user can take one of several actions, including selecting one of the videos from the displayed list to be played on the television display 23 or initiating a command with respect to a video that already has been loaded to the television set 22 (block 108). The mobile phone 20 then formats and transmits a message to the server system 24 (block 110). The message from the mobile phone 20 contains a transmission code that includes data regarding the user information (e.g., user identification or account number), the secondary display it wants to connect to (e.g., television set 22 with display 23), the location and name of the media player for the selected video, the command (e.g., play, pause, rewind, etc.), and the video file to be acted upon. An example of the format of a transmission code from the mobile phone 20 to the server system 24 is illustrated in FIG. 3. Different formats and/or different information may be appropriate for other implementations.

The message from the mobile phone 20 is transmitted over the Internet 21 and is received by the server system 24 (block 112). Based on information in the message from the mobile phone 20, the server system 24 verifies that the user has an account (block 114), and the contents of the message, as well as the date and time of receipt of the message, are added to a personal computing device database 32 (block 116) which forms part of a switchboard 28. In general, all messages from a particular user's personal computing device 20 are stored in the database 32 corresponding to an account for the particular user. Thus, the database 32 stores a record of all messages received from a user's personal computing device 20, as well as the user's identification, an indication of the target device 22, an identification of the media player that is required for the selected video, and an identification of the selected video.

The switchboard 28 also includes a look-up table 34 that stores a correspondence between a particular personal computing device (such as mobile phone 20) and target devices (e.g., the television set 22) to which the user command is directed. An example of the look-up table 28 is illustrated in FIG. 4. In this example, it is assumed that, at most, a single connection is established at any given time between a particular mobile phone and a display device. However, as explained below, other scenarios are also possible to establish group connections (e.g., multiple mobile phones connected to the same display device). The server system 24 performs a target verification (block 118), which includes checking whether a connection to a particular display device already is established for the mobile phone 20 and, if so, checking the identification of the display device. During the target verification, if the look-up table indicates that there is no connection established between the mobile phone 20 and a particular display device, then the server system 24 sends a message to the mobile phone 20 to prompt the user to identify the device on which the video is to be displayed.

A user can identify the device on which the video is to be displayed in one of several ways, depending on the implementation. In some implementations, the user can select the display device from a list of devices displayed on the mobile phone 20. The list can include a field populated with names or identifications of display devices that previously have been initialized for connection. Alternatively, the user can select the display device by entering a synchronization code uniquely associated with the particular display device. As illustrated in FIG. 7A, the synchronization code 48 can be displayed, for example, on a splash page of the display device as text on the screen or as an image such as a QR code and can be entered into the mobile phone 20, for example, manually by the user or by scanning the code into the mobile phone. The code can be scanned, for example, using optical scanning or RFID techniques. Preferably, the synchronization code is different from the IP address associated with the device 22. The IP address also can be different from the media access control (MAC) address associated with the device 22. For example, in some implementations, the synchronization code is generated randomly and assigned to the display device 22 each time it connects to the server system 24. Thus, a particular display device 22 may have an IP address, a MAC address, a web or browser cookie, and a synchronization code ("sync code") assigned to it at any given

time. This information can be stored, for example, in a look-up table in the server system 24. An example of entries in such a look-up table are illustrated in FIG. 7B.

Once the synchronization code is entered into, or captured by, the mobile phone 20, it is sent from the mobile phone 20 to the server system 24, which stores the information in the look-up table 36 so as to establish a connection between the mobile phone 20 and the display device 22 through the server system 24.

Once a connection is established between the mobile phone 20 and the display device 22, signals sent from the mobile device 20 to its associated database 32 are copied to a database 34 associated with the target device (e.g., television set 24) based on the correspondence between the mobile device and the target device listed in the look-up table 36 (block 122). Thus, the database 32 entries associated with a particular display device (e.g., television set 24) provide a record of the messages received for that display device, as well as an indication of the identification of the device that sent each message, an indication of the media player required to play the video, and an indication of the selected video.

In the illustrated implementation, the command in the transmission code (see FIG. 3) contains a JavaScript reference to control the media player needed to play the selected video. Various types of video players may use different JavaScript commands to control their respective playback. Therefore, in the illustrated implementation, a universal adapter 26 is provided to interpret and convert a standard or universal command (e.g., play, pause, etc.) into the specific command recognized by the media player. Each time a signal is received from the mobile device 20, the API adapter 26 checks and identifies the specific media player that is being requested. Based on this information, the system loads the appropriate set of protocols or application programming interfaces (APIs) from its library and converts the incoming commands from the mobile device 20 into the correct JavaScript (or other programming) code used by the target device 22 to control the specific player (block 120). The server system 24 then copies the converted version of the message to the database 34 associated with the target device 22, as indicated above in connection with block 122.

The universal adapter 26 can be implemented, for example, as a look-up table. Examples of entries in such a look-up table are illustrated in FIG. 5. Thus, for a universal

command "New Video," the universal adapter 26 provides the corresponding command for each of several specific media players (e.g., "yt_loadVideo" for YouTube). Similarly, for a universal command "Pause," the universal adapter 26 provides the corresponding command for each of several specific media players (e.g., "pauseVideo" for Ted.com). Other universal commands and the corresponding command(s) for one of more media players also can be stored by the universal adapter 26.

The display device 22 periodically checks the entries in the database 34 to determine if there are any new messages/commands directed to it (block 124). For example, in some implementations, the display device 22 polls the associated database 34 at some predetermined time interval. In some implementations, instead of the display device 22 periodically checking whether there are any messages for it in the database 34, the server system 24 can push the messages to the display device 22. In any event, the system is arranged so that the display device 22 receives the messages intended for it.

When the display device 22 receives a message from the server system 24 (block 126), the display device executes the message (block 128). In some cases, the media player required to play the video indicated in the message is not presently loaded in the display device 22. For example, the received command may be to "play" a particular video. As indicated by FIG. 6, if the media player needed to play the video is not already loaded in the display device 22, the display device 22 requests and obtains a copy of the appropriate media player 40 and a copy of the video file 42 from a content provider 30, loads the media player and then presents the video on the display 23 (FIG. 2, block 130). Likewise, as indicated by FIG. 6, if the appropriate media player already is loaded in the display device, but the particular video is not, then the display device 22 requests and obtains a copy of the video file 42 from the content provider 30 and proceeds to play the video. To allow the display device 22 to switch between different video players (i.e., to load and unload different video players), a software program can be stored on the display device and/or the web site to establish a secure connection back to the server system 24.

Once the video is playing on the display device 22, the user of the mobile phone 20 can control the playing of the video by entering appropriate commands (e.g., pause, fast forward, rewind, stop, play, etc.) through the mobile phone. Each command is incorporated into a message including a transmission code (FIG. 3) as described above.

The message is transmitted to the server system 24, which copies the message into database entries associated with the particular display device 22 (i.e., after performing any conversion of the command by the API adapter 26). Once the message is retrieved by or sent to the display device 22, the display device proceeds to execute the command.

The system and methods described here allow a user of a mobile phone or other personal computing device to create a playlist based on videos (or other types of content) from multiple sources and to play back each video using a single interface that can be used to control different media players.

As mentioned above, the system and methods described above also can be used with types of content other than video. In that case, different types of user-initiated commands may be available to control the content displayed on the display 23. For example, for interactive video games, the user-initiated commands can include control commands appropriate for the particular game.

Although the implementation of FIG. 1 illustrates the display device 22 as a television set with a display screen 23, other types of display devices can be used as well (e.g., a laptop or personal computer).

The systems and methods can be used in various scenarios to play back videos (or other content). Examples of several scenarios that can be implemented using the system described above are described in the following paragraphs. For example, a first scenario involves a single user's smartphone connecting to a single display device (FIG. 8). In this scenario, the user turns on, for example, her display device (e.g., personal computer with a display monitor), opens up a browser and accesses a website associated with the server system 24. The user then clicks on a link that launches the software program to establish a secure connection back to the server system 24. The software program opens a splash page (see FIG. 14A), and a sync-code is displayed on the monitor. The user then opens the appropriate application on her smartphone. In the smartphone application, the user accesses a "Connect" screen from which he can select one of several listed display devices (see FIG. 14B). Alternatively, the user can enter the sync-code displayed on the computer monitor (see FIG. 14B). The user then clicks on a SEND button which causes a message including the sync-code to be sent the server system 24. In response, the server system 24 establishes a connection between the user's smartphone and the selected

display device through a look-up table as described above with respect to FIG. 4. The user can use a search tool in the smartphone application to find a video. In response to the search, a list of videos satisfying the search appears on the smartphone (see FIG. 14C). When the user selects a video from the list displayed on the smartphone, the information is provided through the server system 24 to the personal computer. In some implementations, a pop-up window may appear on the smartphone listing one or more options for the user to take regarding the selected video. Such options can include, for example, play the video on the selected display device (e.g., the personal computer), play the video on the smartphone, or add the video to the playlist on the smartphone. If the user chooses to have the video played on the display device (e.g., the personal computer), the personal computer obtains a copy of the required video player and the selected video from an appropriate content provider over the Internet and begins to play the video on the monitor as described previously. In some implementations, a message is displayed on the user's smartphone indicating that the selected video is playing and providing additional information about the selected video (see FIG. 14D). The user can control playing of the video (e.g., pause, fast forward, rewind, play, etc.) from her smartphone.

A second scenario involves saving a selected video to a playlist on a single user's smartphone, and subsequently playing the video on a display device (FIG. 9). In this scenario, the user opens the appropriate application on his smartphone and searches for videos using the search tool displayed in the application. When a list of videos is displayed on the smartphone in response to the search request, the user selects one or more videos to add to his playlist. At that time, or at a later time, the user can connect to a display device through the server system 24. To do so, the user opens the playlist on his smartphone and selects a video. The information is provided through the server system 24 to the display device, which obtains a copy of the required video player and the selected video from an appropriate content provider over the Internet and begins to play the video. The user can control playing of the video (e.g., pause, fast forward, rewind, play, etc.) from his smartphone.

A third scenario involves multiple users' smartphones and a single display device (FIG. 10). For example, a user may want to share and watch videos with a group of friends watching together on a single display device. In this situation, the user can access

the application or web site to set up a group and serve as the moderator for the group. The user then can send out a request to other members of the group, or other users can send a request to the moderator to join the group. Users can search for other users based, for example, on username or from a contact list. The moderator then can select a user in the group to control the display device. FIG. 14E illustrates an example of a screen on the user's smartphone that allows the user to connect with other users to form a group and to select which member of the group controls the display device (e.g., by selecting a member of the group from the list "Me, Guest 1, Guest 2, . . ." near the top of the screen). Alternatively, the moderator can set it up so that control is passed to each member of the group in turn automatically, or so that the next turn can be determined by consensus of the entire group, via some form of voting. Regardless of who has control of the display device 22, each user in the group retains control of his own smartphone. The look-up table 36 in the server system 24 stores the connections established between the personal computing devices of the users in the group and the display device (see FIG. 15).

A fourth scenario involves one user's smartphone and multiple display devices (FIG. 11). In this example, a user opens the application on his smartphone to establish a connection to a first display device and then repeats the process for multiple display devices. A list of devices that the user's smartphone is connected to is displayed on the smartphone. The user can choose to control all devices simultaneously or one at a time. To do so, the user selects from the list the display device(s) he wants to control. The user then can search for videos using his smartphone. In response to the user selecting a particular video, the selected video is played on the selected display device(s).

A fifth scenario involves multiple users' smartphones and multiple connected display devices (FIG. 12). For example, a user may want to share and watch videos with a group of friends, who may be in different locations each of which has a separate display device. Each user establishes a connection from her smartphone to the display device where she is located. One of the users uses the application or web site to establish a group, with the user who establishes the group serving as the group moderator. The user can send out a request to other users to join the group or other users can send a request to the moderator to join the group. In some implementations, users can search for other users based on username or from a contact list. The moderator chooses which member of

the group has control of the display device. Alternatively, the moderator can set it up control is passed to each member of the group in turn automatically, or so that the next turn can be determined by consensus of the entire group, via some form of voting. The signal sent from the smartphone of the group member who has control is sent (via the server system 24) to all display devices within the group. Regardless of which group member has control of the display devices, each user retains control of her own smartphone. The look-up table 36 in the server system 24 stores the connections established between the personal computing devices of the users in the group and the display devices (see FIG. 15).

A sixth scenario involves sharing video links and a playlist (FIG. 13). For example, a user within a group can share a video playlist and video links via an Instant messaging system built-in to the application. Users also can post video links or a video playlist to third-party web sites (e.g., social networking sites). Other users can view the video link and playlist within the application. When a video from the list is selected, it plays on the selected device.

The system and methods can be used by a wide variety of users in addition to individual viewers. For example, companies that provide on-line video platforms that host videos for other individuals or companies can obtain useful advantages by integrating the platforms with the server system 24. Programming hooks can be created in the API so that the on-line video platform's media player can communicate with the server system 24. When media player commands for an on-line video platform are added to the system 24, the media player's API is placed in an API library and is stored in the API adapter 26. The on-line video platform can then offer customers the ability to add videos to their own mobile web sites that are enabled to operate with the server system 24.

The system and methods also can be used by content providers. For example, the content provider may want to deliver its media on-line. The content provider can use an on-line video platform that is enabled to operate with the server system 24. In some implementations, the content provider is allowed to add links to videos for that web site (i.e., mobile site or an application). The link facilitates synchronization to the secondary

device 22 (e.g., a television set) and allows the end-user to load and control the video on the secondary device.

As used in this disclosure, terms such as "first," "second," etc. with respect to the messages are used simply as labels to distinguish the various messages from one another. Such terms do not imply that there cannot be any other messages prior to the first message or that there cannot be other messages between the first and second messages.

Implementations of the subject matter and the operations described in this specification can include digital electronic circuitry, or in computer software, firmware, or hardware, including the structures disclosed in this specification and their structural equivalents, or in combinations of one or more of them. Implementations of the subject matter described in this specification can include one or more computer programs, i.e., one or more modules of computer program instructions, encoded on computer storage medium for execution by, or to control the operation of, data processing apparatus. Alternatively or in addition, the program instructions can be encoded on an artificially-generated propagated signal, e.g., a machine-generated electrical, optical, or electromagnetic signal that is generated to encode information for transmission to suitable receiver apparatus for execution by a data processing apparatus. A computer storage medium can be, or can be included in, a computer-readable storage device, a computer-readable storage substrate, a random or serial access memory array or device, or a combination of one or more of them. Moreover, while a computer storage medium is not a propagated signal, a computer storage medium can be a source or destination of computer program instructions encoded in an artificially-generated propagated signal. The computer storage medium can also be, or be included in, one or more separate physical components or media (e.g., multiple CDs, disks, or other storage devices).

The operations described in this specification can include operations performed by a data processing apparatus on data stored on one or more computer-readable storage devices or received from other sources. The term "data processing apparatus" encompasses all kinds of apparatus, devices, and machines for processing data, including by way of example a programmable processor, a computer, a system on a chip, or multiple ones, or combinations, of the foregoing. The apparatus and execution

environment can realize various different computing model infrastructures, such as web services, distributed computing and grid computing infrastructures.

A computer program (also known as a program, software, software application, script, or code) can be written in any form of programming language, including compiled or interpreted languages, declarative or procedural languages, and it can be deployed in any form, including as a stand-alone program or as a module, component, subroutine, object, or other unit suitable for use in a computing environment. A computer program may, but need not, correspond to a file in a file system. A program can be stored in a portion of a file that holds other programs or data (e.g., one or more scripts stored in a markup language document), in a single file dedicated to the program in question, or in multiple coordinated files (e.g., files that store one or more modules, sub-programs, or portions of code). A computer program can be deployed to be executed on one computer or on multiple computers that are located at one site or distributed across multiple sites and interconnected by a communication network.

Processors suitable for the execution of a computer program include, by way of example, both general and special purpose microprocessors, and any one or more processors of any kind of digital computer. Generally, a processor will receive instructions and data from a read-only memory or a random access memory or both. Elements of a computer include a processor for performing actions in accordance with instructions and one or more memory devices for storing instructions and data.

Generally, a computer will also include, or be operatively coupled to receive data from or transfer data to, or both, one or more mass storage devices for storing data, e.g., magnetic, magneto-optical disks, or optical disks. However, a computer need not have such devices. Moreover, a computer can be embedded in another device, e.g., a mobile telephone, a personal digital assistant (PDA), a mobile, audio or video player, a game console, a Global Positioning System (GPS) receiver, or a portable storage device (e.g., a universal serial bus (USB) flash drive), to name just a few. Devices suitable for storing computer program instructions and data include all forms of non-volatile memory, media and memory devices, including by way of example semiconductor memory devices, e.g., EPROM, EEPROM, and flash memory devices; magnetic disks, e.g., internal hard disks or removable disks; magneto-optical disks; and CD-ROM and DVD-ROM disks. The

processor and the memory can be supplemented by, or incorporated in, special purpose logic circuitry.

Although this specification contains many specific implementation details, these should not be construed as limitations on the scope of any inventions or of what may be claimed, but rather as descriptions of features specific to particular implementations of particular inventions. Certain features that are described in this specification in the context of separate implementations can also be implemented in combination in a single implementation. Conversely, various features that are described in the context of a single implementation can also be implemented in multiple implementations separately or in any suitable subcombination. Moreover, although features may be described above as acting in certain combinations and even initially claimed as such, one or more features from a claimed combination can in some cases be excised from the combination, and the claimed combination may be directed to a subcombination or variation of a subcombination.

Similarly, while operations are depicted in the drawings in a particular order, this should not be understood as requiring that such operations be performed in the particular order shown or in sequential order, or that all illustrated operations be performed, to achieve desirable results. In certain circumstances, multitasking and parallel processing may be advantageous. Moreover, the separation of various system components in the implementations described herein and the attachments hereto should not be understood as requiring such separation in all implementations, and it should be understood that the described program components and systems can generally be integrated together in a single software product or packaged into multiple software products.

Thus, although particular implementations have been described, other implementations are within the scope of the claims.

What is claimed is:

1. A machine-implemented method of controlling presentation of video content on a display device, the method comprising:

receiving, in a server system, one or more signals from a personal computing device, the one or more signals specifying a video file to be acted upon and identifying a media player for playing the video content, the one or more signals further including a command for controlling the presentation of the video content on the display device,

converting, by the server system, the command into corresponding programming code used by the display device to control the media player; and

storing, in a database associated with the server system, a message for transmission to or retrieval by the display device, wherein the message specifies the video file to be acted upon, identifies the media player for playing the video content, and includes the corresponding programming code used by the display device to control the media player in accordance with the command.

2. The method of claim 1 including:

checking, in the server system, the identity of the media player identified in the one or more signals from the personal computing device;

loading an appropriate set of protocols or application programming interfaces from a library based on the identity of the media player; and

converting the command from the personal computing device into a corresponding JavaScript code used by the display device to control the media player.

3. The method of claim 1 wherein converting the command into corresponding programming code used by the display device to control the media player includes using information in a look-up table.

4. The method of claim 3 wherein the command contained in the one or more signals from the personal computing device is in the form of a universal command, and wherein the look-up table stores a plurality of specific commands, each of which represents, respectively, a corresponding command for a particular media player.

5. The method of claim 1 wherein the command contained in the one or more signals from the personal computing device is in the form of a universal command, and wherein converting the command includes selecting from among a plurality of specific commands, each of which represents, respectively, a corresponding command for a particular media player.

6. The method of claim 1 wherein the universal command represents an instruction to play the video content, to stop playing the video content or to pause playing the video content.

7. The method of claim 1 wherein the video content is an interactive video game.

8. The method of claim 1 wherein the video content is streaming media.

9. The method of claim 1 including:

receiving, in the server system, a code from the personal computing device, wherein the code is uniquely associated with the display device on which the video content is to be played; and

storing in the server system a record establishing a connection between the personal computing device and the display device based on the code.

10. The method of claim 9 wherein the code is different from an IP address associated with the display device and is different from a MAC address associated with the display device.

11. The method of claim 9 including assigning a randomly generated code to the display device each time the display device connects to the server system.

12. A system for controlling playing of video content on a display device, the system comprising:

a server system;

a first database storing a relationship between a personal computing device and the display device; and

a second database;

wherein the server system is operable to receive one or more signals from a personal computing device, the one or more signals specifying a video file to be acted upon and identifying a media player for playing the video content, the one or more signals further including a command for controlling the presentation of the video content on the display device,

the server system being operable to convert the command into corresponding programming code used by the display device to control the media player;

the server system being further operable to store in the second database a message for transmission to or retrieval by the display device, wherein the message specifies the video file to be acted upon, identifies the media player for playing the video content, and includes the corresponding programming code used by the display device to control the media player in accordance with the command.

13. The system of claim 12 including:

a library storing protocols or application programming interfaces,

wherein the server system is operable to check the identity of the media player identified in the one or more signals from the personal computing device, load an appropriate set of protocols or application programming interfaces from the library based on the identity of the media player, and convert the command from the personal computing device into a corresponding programming code used by the display device to control the media player.

14. The system of claim 12 including:

a look-up table storing a plurality of commands each of which is for a particular type of media player,

wherein the server system is operable to convert the command into corresponding programming code used by the display device to control the media player based on information in the look-up table.

15. The system of claim 12 wherein the command contained in the one or more signals from the personal computing device is a universal command, and wherein the look-up table stores a correspondence between the universal command and a plurality of specific commands, each of which is for a particular media player.

16. The system of claim 15 the server system is operable to convert the universal command by selecting from among the plurality of specific commands stored in the look-up table.

17. The system of claim 12 wherein the universal command represents an instruction to play the video content, to stop playing the video content or to pause playing the video content.

18. The system of claim 12 wherein the video content is an interactive video game.

19. The system of claim 12 wherein the video content is streaming media.

20. The system of claim 12 wherein the server system is operable to receive a code from the personal computing device, wherein the code is uniquely associated with the display device on which the video content is to be played, the server system further being operable to store the record establishing a connection between the personal computing device and the display device based on the code.

21. The system of claim 20 wherein the code is different from an IP address associated with the display device and is different from a MAC address associated with the display device.

22. The system of claim 20 wherein the server system is operable to assign a randomly generated code to the display device each time the display device connects to the server system.

23. An automated machine-implemented method of presenting video content on a display device, the method comprising:

retrieving, by the display device, first information that specifies a first video file to be acted upon, that identifies a first media player for playing the first video file, and that indicates corresponding programming code used by the display device to control the first media player in accordance with a first command;

obtaining, by the display device, over the Internet the first media player for playing the first video file;

loading the first media player in the display device;

executing the first command with respect to the first video file using the first media player;

subsequently retrieving, by the display device, second information that specifies a second video file to be acted upon, that identifies a second media player for playing the second video file, and that indicates corresponding programming code used by the display device to control the second media player in accordance with a second command;

obtaining, by the display device, over the Internet the second media player for playing the second video file;

loading the second media player in the display device; and

executing the second command with respect to the second video file using the second media player.

24. The method of claim 23 wherein the display device comprises a television set with a display screen.

25. The method of claim 23 wherein the display device comprises a laptop or personal computer.

26. The method of claim 23 wherein each of the first and second commands represents an instruction to play the respective video file, to stop playing the respective video file or to pause playing the respective video file.

27. The method of claim 23 wherein the display device checks whether the respective media player needed to play the particular video file already is loaded in the display device before obtaining a copy of the media player over the Internet.

ABSTRACT OF THE DISCLOSURE

A system for presenting and controlling content on a display device includes a network, a server system coupled to the network and comprising one or more servers, a display device coupled to the network and having a display, and a personal computing device operable to transmit a first message according to a specified format over the network to the server system. The server system stores an association between the personal computing device and the display device. The first message identifies user-selected content and a media player to play the content. The server system is operable, in response to receiving the first message from the personal computing device, to provide to the display device a second message identifying the user-selected content and the media player to play the content. In response to receiving the second message, the display device is operable to obtain a first media player needed to play the content, to load the media player and to present the content on the display.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Doc Code: TRACK1.REQ
Document Description: TrackOne Request

PTO/SB/424 (09-11)

CERTIFICATION AND REQUEST FOR PRIORITIZED EXAMINATION (TRACK I) (Page 1 of 1)

First Named Inventor:	David Strober	Nonprovisional Application Number (if known):	
Title of Invention:	Play Control of Content on a Display Device		

APPLICANT HEREBY CERTIFIES THE FOLLOWING AND REQUESTS PRIORITIZED EXAMINATION (TRACK I) FOR THE ABOVE-IDENTIFIED APPLICATION.

1. (a) The application is an original nonprovisional utility application filed under 35 U.S.C. 111(a). This certification and request is being filed with the utility application via EFS-Web.

   OR

   (b) The application is an original nonprovisional plant application filed under 35 U.S.C. 111(a). This certification and request is being filed with the plant application in paper. (Note: Plant applications cannot be filed via EFS-Web.)

   Note: The following are excluded from the Track I program: design applications, provisional applications, national stage applications, PCT international applications, reissue applications, and reexamination proceedings.

2. The following fees (in amounts consistent with the current fee schedule available at http://www.uspto.gov/about/offices/cfo/finance/fees.jsp) are filed with the application: (1) basic filing fee; (2) search fee; (3) examination fee; (4) any required excess claims fees; (5) any required application size fee; (6) publication fee; (7) processing fee (Track I) set forth in 37 CFR 1.17(i); and (8) prioritized examination fee (Track I) set forth in 37 CFR 1.17(c).

3. An executed oath or declaration under 37 CFR 1.63 is filed with the application.

4. The application contains or is amended to contain no more than four independent claims and no more than thirty total claims, and no multiple dependent claims.

Signature /Samuel Borodach/	Date 9/26/2011
Name (Print/Typed) Samuel Borodach	Practitioner Registration Number 38388

Note: *Signatures of all the inventors or assignees of record of the entire interest or their representative(s) are required in accordance with 37 CFR 1.33 and 11.18. Please see 37 CFR 1.4(d) for the form of the signature. If necessary, submit multiple forms for more than one signature, see below*.*

☐ *Total of _____ forms are submitted.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

This collection of information is required by 37 CFR 1.76. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 23 minutes to complete, including gathering, preparing, and submitting the completed application data sheet form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these records.

2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.

3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.

4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).

5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.

6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).

7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.

8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.

9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

PROTECTING YOUR INVENTION OUTSIDE THE UNITED STATES

Since the rights granted by a U.S. patent extend only throughout the territory of the United States and have no effect in a foreign country, an inventor who wishes patent protection in another country must apply for a patent in a specific country or in regional patent offices. Applicants may wish to consider the filing of an international application under the Patent Cooperation Treaty (PCT). An international (PCT) application generally has the same effect as a regular national patent application in each PCT-member country. The PCT process **simplifies** the filing of patent applications on the same invention in member countries, but **does not result** in a grant of "an international patent" and does not eliminate the need of applicants to file additional documents and fees in countries where patent protection is desired.

Almost every country has its own patent law, and a person desiring a patent in a particular country must make an application for patent in that country in accordance with its particular laws. Since the laws of many countries differ in various respects from the patent law of the United States, applicants are advised to seek guidance from specific foreign countries to ensure that patent rights are not lost prematurely.

Applicants also are advised that in the case of inventions made in the United States, the Director of the USPTO must issue a license before applicants can apply for a patent in a foreign country. The filing of a U.S. patent application serves as a request for a foreign filing license. The application's filing receipt contains further information and guidance as to the status of applicant's license for foreign filing.

Applicants may wish to consult the USPTO booklet, "General Information Concerning Patents" (specifically, the section entitled "Treaties and Foreign Patents") for more information on timeframes and deadlines for filing foreign patent applications. The guide is available either by contacting the USPTO Contact Center at 800-786-9199, or it can be viewed on the USPTO website at http://www.uspto.gov/web/offices/pac/doc/general/index.html.

For information on preventing theft of your intellectual property (patents, trademarks and copyrights), you may wish to consult the U.S. Government website, http://www.stopfakes.gov. Part of a Department of Commerce initiative, this website includes self-help "toolkits" giving innovators guidance on how to protect intellectual property in specific countries such as China, Korea and Mexico. For questions regarding patent enforcement issues, applicants may call the U.S. Government hotline at 1-866-999-HALT (1-866-999-4158).

LICENSE FOR FOREIGN FILING UNDER

Title 35, United States Code, Section 184

Title 37, Code of Federal Regulations, 5.11 & 5.15

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as

set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Bureau of Industry and Security, Department of Commerce (15 CFR parts 730-774); the Office of Foreign AssetsControl, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

Doc Code: TRACK1.GRANT

Decision Granting Request for Prioritized Examination (Track I)	Application No.: 13245001

1. THE REQUEST FILED September 26, 2011 IS **GRANTED**.

   The above-identified application has met the requirements for prioritized examination (Track I).

2. **The above-identified application will undergo prioritized examination.** The application will be accorded special status throughout its entire course of prosecution until one of the following occurs:

   A. filing a **petition for extension of time** to extend the time period for filing a reply;

   B. filing an **amendment to amend the application to contain more than four independent claims, more than thirty total claims**, or a multiple dependent claim;

   C. filing a **request for continued examination**;

   D. filing a notice of appeal;

   E. filing a request for suspension of action;

   F. mailing of a notice of allowance;

   G. mailing of a final Office action;

   H. completion of examination as defined in 37 CFR 41.102; or

   I. abandonment of the application.

Telephone inquiries with regard to this decision should be directed to Kakali Chaki at (571-272-3719), Mondays through Fridays. In her absence, calls may be directed to Mano Padmanabhan, at (571)272-4210.

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE *3* MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1)☒ Responsive to communication(s) filed on *26 September 2011*.

2a)☐ This action is **FINAL**. 2b)☒ This action is non-final.

3)☐ An election was made by the applicant in response to a restriction requirement set forth during the interview on _____; the restriction requirement and election have been incorporated into this action.

4)☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

5)☒ Claim(s) *1-27* is/are pending in the application.

5a) Of the above claim(s) _____ is/are withdrawn from consideration.

6)☐ Claim(s) _____ is/are allowed.

7)☒ Claim(s) *1-27* is/are rejected.

8)☐ Claim(s) _____ is/are objected to.

9)☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

10)☐ The specification is objected to by the Examiner.

11)☒ The drawing(s) filed on *26 September 2011* is/are: a)☒ accepted or b)☐ objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

12)☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

13)☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

a)☐ All b)☐ Some * c)☐ None of:

1.☐ Certified copies of the priority documents have been received.

2.☐ Certified copies of the priority documents have been received in Application No. _____.

3.☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) ☒ Notice of References Cited (PTO-892)
2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
3) ☒ Information Disclosure Statement(s) (PTO/SB/08) Paper No(s)/Mail Date *9/26/11*.
4) ☐ Interview Summary (PTO-413) Paper No(s)/Mail Date. _____ .
5) ☐ Notice of Informal Patent Application
6) ☐ Other: _____.

DETAILED ACTION

This action is in response to the original filing dated 26 September 2011. Claims 1-27 are pending and have been considered below.

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

> Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 12-21 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 12-21 are drawn to a system. The claimed system does not exclude a system composed entirely of software. Software per se is none of a process, machine, manufacture or composition of matter, and, therefore is not a statutory category of invention.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

> A person shall be entitled to a patent unless –
>
> (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-10, 12-26 are rejected under 35 U.S.C. 102(e) as being anticiptated by Schwartz et al. (US 2011/00600998 A1).

Claim 1. Schwartz discloses a machine-implemented method of controlling presentation of video content on a display device, the method comprising:

a. receiving, in a server system, one or more signals from a personal computing device, the one or more signals specifying a video file to be acted upon and identifying a media player for playing the video content (paragraph 0095 [In an embodiment, the application 10 may be a self-contained software application for a personal computer, a laptop personal computer, a PDA, a mobile phone and/or another computing device which is capable of running software applications.], paragraph 0097 [The media content may be and/or may have image content, audio content, video content and/or the like.], paragraph 0114 [The application 10 may have a media server component 100 which may transfer the media content to one or more of the media destinations 21,22,23 in the network 20.], paragraph 0137 [The media server component 100 may receive request messages from the target rendering device which may request the transcoded, reformatted and/or repurposed internet media content. The request messages from the target rendering device may request specific portions of the transcoded, reformatted and/or repurposed internet media content.], paragraph 0156 [The media capabilities

of the media library may specify the media which is compatible with the associated media player and/or which is appropriate for use with the associated media management application.]),

b. the one or more signals further including a command for controlling the presentation of the video content on the display device (paragraph 0137 [The media server component 100 may receive request messages from the target rendering device which may request the transcoded, reformatted and/or repurposed internet media content. The request messages from the target rendering device may request specific portions of the transcoded, reformatted and/or repurposed internet media content.]),

c. converting, by the server system, the command into corresponding programming code used by the display device to control the media player (paragraph 0122 [As a result, the one or more media content objects may be requested, may be retrieved, may be transcoded, may be reformatted, and/or may be repurposed for transfer to the portable media playback device.]); and

d. storing, in a database associated with the server system, a message for transmission to or retrieval by the display device (paragraph 0156 [One or more of the media destinations may be, for example, a media library, a local media server and/or a media storage device

to which the media content object may be downloaded, copied and/or stored. The media library may be associated with a media player and/or a media management application. The media capabilities of the media library may specify the media which is compatible with the associated media player and/or which is appropriate for use with the associated media management application.]), wherein

e. the message specifies the video file to be acted upon, identifies the media player for playing the video content (paragraph 0156 [One or more of the media destinations may be, for example, a media library, a local media server and/or a media storage device to which the media content object may be downloaded, copied and/or stored. The media library may be associated with a media player and/or a media management application. The media capabilities of the media library may specify the media which is compatible with the associated media player and/or which is appropriate for use with the associated media management application.]), and

f. includes the corresponding programming code used by the display device to control the media player in accordance with the command (paragraph 0122 [As a result, the one or more media content objects may be requested, may be retrieved, may be transcoded, may be

reformatted, and/or may be repurposed for transfer to the portable media playback device.], paragraph 0271 [As generally shown at step 725, the application 10 may determine a subset of the identified media content objects which may be suitable for transmittal to and/or rendering by the selected media destination. For example, the application 10 may use user preferences, user input, properties of the identified media content objects and/or the media capabilities of the media destinations to determine the subset of the identified media content objects which may be suitable for transmittal to and/or rendering by the selected media destination.]).

Claim 2. Schwartz discloses the method of claim 1 and Schwartz further discloses:

a. checking, in the server system, the identity of the media player identified in the one or more signals from the personal computing device paragraph 0156 [The media capabilities of the media library may specify the media which is compatible with the associated media player and/or which is appropriate for use with the associated media management application.]);

b. loading an appropriate set of protocols or application programming interfaces from a library based on the identity of the media player (paragraph 0120 [The

DDC component 110 may exchange protocol messages with the portable media playback devices to determine the capabilities of the portable media playback devices and/or other properties of the portable media playback devices.]); and

c. converting the command from the personal computing device into a corresponding JavaScript code used by the display device to control the media player (paragraph 0141 [The scripts and/or the active objects may include, for example, JavaScript,]).

Claim 3. Schwartz discloses the method of claim 1 and Schwartz further discloses converting the command into corresponding programming code used by the display device to control the media player includes using information in a look-up table (paragraph 0116 [The DDC component 110 may consult additional sources, such as, for example, a capabilities database to determine the capabilities and/or the additional capabilities of the available rendering devices.]).

Claim 4. Schwartz discloses the method of claim 3 and Schwartz further discloses the command contained in the one or more signals from the personal computing device is in

the form of a universal command (paragraph 0122 [As a result, the one or more media content objects may be requested, may be retrieved, may be transcoded, may be reformatted, and/or may be repurposed for transfer to the portable media playback device.]), and wherein the look-up table stores a plurality of specific commands, each of which represents, respectively, a corresponding command for a particular media player (paragraph 0116 [The DDC component 110 may consult additional sources, such as, for example, a capabilities database to determine the capabilities and/or the additional capabilities of the available rendering devices.]).

Claim 5. Schwartz discloses the method of claim 1 and Schwartz further discloses the command contained in the one or more signals from the personal computing device is in the form of a universal command (paragraph 0122 [As a result, the one or more media content objects may be requested, may be retrieved, may be transcoded, may be reformatted, and/or may be repurposed for transfer to the portable media playback device.]), and wherein converting the command includes selecting from among a plurality of specific commands, each of which represents, respectively, a corresponding command for a particular media player (paragraph 0116 [The DDC component 110 may consult additional sources, such as, for example, a capabilities

database to determine the capabilities and/or the additional capabilities of the available rendering devices.]).

Claim 6. Schwartz discloses the method of claim 1 and Schwartz further discloses the universal command represents an instruction to play the video content, to stop playing the video content or to pause playing the video content (paragraph 0119 [The rendering control instructions may correspond to the playback controls, such as, for example, "Play," "Pause," "Stop," "Rewind," "Fast Forward," "Seek to a specific time," "Volume Up," "Volume Down," "Skip to the next media content object," "Skip to the previous media content object", "Jump to a specified media content object," and/or other playback controls known to one having ordinary skill in the art.]).

Claim 7. Schwartz discloses the method of claim 1 and Schwartz further discloses the video content is an interactive video game (paragraph 0100 [The media destinations 21,22,23 may be, for example, available rendering devices to which media content may be sent; ... a portable gaming device]).

Claim 8. Schwartz discloses the method of claim 1 and Schwartz further discloses the video content is streaming media (paragraph 0097 [The media content may be

and/or may have image content, audio content, video content and/or the like. … The media content sites may provide the media content to the application 10 using well-known internet delivery protocols, such as, for example, Hypertext Transfer Protocol ("HTTP"), Real Time Streaming Protocol ("RTSP"),]).

Claim 9. Schwartz discloses the method of claim 1 and Schwartz further discloses: receiving, in the server system, a code from the personal computing device, wherein the code is uniquely associated with the display device on which the video content is to be played (paragraph 0156 [The media capabilities of the media library may specify the media which is compatible with the associated media player and/or which is appropriate for use with the associated media management application.]); and storing in the server system a record establishing a connection between the personal computing device and the display device based on the code (paragraph 0036 [In an embodiment, the method has the step of displaying a visual representation for each of a plurality of rendering devices connected to the network wherein the terminal concurrently displays the first webpage, the first set of symbolic representations and the visual representation for each of the plurality of rendering devices.]).

Claim 10. Schwartz discloses the method of claim 9 and Schwartz further discloses the code is different from an IP address associated with the display device and is different from a MAC address associated with the display device (paragraph 0120 [The DDC component 110 may exchange protocol messages with the portable media playback devices to determine the capabilities of the portable media playback devices and/or other properties of the portable media playback devices. The other properties may be, for example, a manufacturer name, a model number, a description, a graphic representation, and/or like properties of the portable media playback devices.]).

Claim 12 discloses a system for controlling playing of video content on a display device similar to the machine-implemented method of claim 1 and is rejected with the same rational. Schwartz further discloses a first database storing a relationship between a personal computing device and the display device (paragraph 0116 [devices. The DDC component 110 may consult additional sources, such as, for example, a capabilities database to determine the capabilities and/or the additional capabilities of the available rendering devices.], paragraph 0156 [The media capabilities of the media library may specify the media which is compatible with the associated media player and/or which is appropriate for use with

the associated media management application.]). Claims 13, 14, 15, 17, 18, 19, 20, 21 are similarly rejected with the same rational as claims 2, 4, 5, 6, 7, 8, 9, 10.

Claim 16. Schwartz discloses the system of claim 15 and Schwartz further discloses the server system is operable to convert the universal command by selecting from among the plurality of specific commands stored in the look-up table (paragraph 0116 [The DDC component 110 may consult additional sources, such as, for example, a capabilities database to determine the capabilities and/or the additional capabilities of the available rendering devices.], paragraph 0119 [The rendering control instructions may correspond to the playback controls, such as, for example, "Play," "Pause," "Stop," "Rewind," "Fast Forward," "Seek to a specific time," "Volume Up," "Volume Down," "Skip to the next media content object," "Skip to the previous media content object", "Jump to a specified media content object," and/or other playback controls known to one having ordinary skill in the art.], paragraph 0122 [As a result, the one or more media content objects may be requested, may be retrieved, may be transcoded, may be reformatted, and/or may be repurposed for transfer to the portable media playback device.]).

Claim 23. Schwartz discloses an automated machine-implemented method of presenting video content on a display device, the method comprising:

a. retrieving, by the display device, first information that specifies a first video file to be acted upon, that identifies a first media player for playing the first video file, and that indicates corresponding programming code used by the display device to control the first media player in accordance with a first command (paragraph 0095 [In an embodiment, the application 10 may be a self-contained software application for a personal computer, a laptop personal computer, a PDA, a mobile phone and/or another computing device which is capable of running software applications.], paragraph 0097 [The media content may be and/or may have image content, audio content, video content and/or the like.], paragraph 0114 [The application 10 may have a media server component 100 which may transfer the media content to one or more of the media destinations 21,22,23 in the network 20.], paragraph 0122 [As a result, the one or more media content objects may be requested, may be retrieved, may be transcoded, may be reformatted, and/or may be repurposed for transfer to the portable media playback device.], paragraph 0137 [The media server component 100 may receive request messages from the target rendering device which may request the transcoded, reformatted and/or

repurposed internet media content. The request messages from the target rendering device may request specific portions of the transcoded, reformatted and/or repurposed internet media content.], paragraph 0156 [The media capabilities of the media library may specify the media which is compatible with the associated media player and/or which is appropriate for use with the associated media management application.]);

b. obtaining, by the display device, over the Internet the first media player for playing the first video file, loading the first media player in the display device (paragraph 0004 [Some media content types may require the user to obtain and/or install an associated media player application and/or a plug-in program, but typically the associated media player application and/or the plug-in program are also available at no cost to the user. Thus, media content sites provide the user with a convenient means to access internet media content and to use the internet media content within the webpages provided by the websites.]);

c. executing the first command with respect to the first video file using the first media player (paragraph 0122 [As a result, the one or more media content objects may be requested, may be retrieved, may be

transcoded, may be reformatted, and/or may be repurposed for transfer to the portable media playback device.]);

d. subsequently retrieving, by the display device, second information that specifies a second video file to be acted upon, that identifies a second media player for playing the second video file, and that indicates corresponding programming code used by the display device to control the second media player in accordance with a second command; obtaining, by the display device, over the Internet the second media player for playing the second video file; loading the second media player in the display device; and executing the second command with respect to the second video file using the second media player (paragraph 0204 [The controls presented in the workspace area may enable the user 40 to save the playlist, play and/or listen to music associated with the playlist using the device which hosts the application 10, and/or redirect the music associated with the playlist to a rendering device in the home network.], paragraph 0234 [FIG. 10 generally illustrates the symbolic representations 315 for the identified media content objects of webpage tabs 360 in an embodiment of the present invention. The symbolic representations 315 for the identified media content objects of the webpage tabs 360 may be displayed in the workspace area 325. As known to one having ordinary skill in the art, the webpage tabs 360 may

enable the webpages corresponding to the webpage tabs 360 to be open simultaneously in the user interface 300.]).

Claim 24. Schwartz discloses the method of claim 23 and Schwartz further discloses the display device comprises a television set with a display screen (paragraph 0024 [The home network may have various rendering devices, such as, for example, networked stereos, televisions,]).

Claim 25. Schwartz discloses the method of claim 23 and Schwartz further discloses the display device comprises a laptop or personal computer (paragraph 0024 [The home network may have various rendering devices, such as, for example, networked stereos, televisions, personal computers,]).

Claim 26. Schwartz discloses the method of claim 23 and Schwartz further discloses each of the first and second commands represents an instruction to play the respective video file, to stop playing the respective video file or to pause playing the respective video file (paragraph 0119 [The rendering control instructions may correspond to the playback controls, such as, for example, "Play," "Pause," "Stop," "Rewind," "Fast Forward," "Seek to a specific time," "Volume Up," "Volume Down," "Skip to the next media content object," "Skip to the previous media content object", "Jump to a specified media content object," and/or

other playback controls known to one having ordinary skill in the art.]).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

> (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

5. Claims 11, 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schwartz et al. (US 2011/00600998 A1) in view of www.vbulletin.com (Best way to generate Random, Unique Session ID's), hereinafter referred to as vbulletin.

Claim 11. Schwartz discloses the method of claim 9 and Schwartz further discloses "In an embodiment, the method has the step of displaying page selection controls which indicate that multiple webpages are available in a current web browsing session wherein the page selection controls enable the user to select any of the multiple webpages for display and further wherein one or more of the symbolic representations depict additional media content objects associated with a second webpage which is one of the multiple webpages wherein the second webpage is a different webpage than the first webpage." (paragraph 0064). Schwartz does not disclose assigning a

randomly generated code to the display device each time the display device connects to the server system, as disclosed in the claims. However, in the same field of invention, vbulletin discloses “Best way to generate Random, Unique Session ID’s” (title). Therefore, considering the teachings of Schwartz and vbullettin, it would have been obvious to one having ordinary skill in the art at the time of the invention to add assigning a randomly generated code to the display device each time the display device connects to the server system to the teachings of Schwartz. One would have been motivated to add assigning a randomly generated code to the display device each time the display device connects to the server system to the teachings of Schwartz to ensure that each user is assigned a unique session ID such that there is no conflicting user sessions from different users.

Claim 22 discloses a system for controlling playing of video content on a display device similar to the machine-implemented method of claim 11 and is rejected with the same rational.

6. Claim 27 is rejected under 35 U.S.C. 103(a) as being unpatentable over Schwartz et al. (US 2011/00600998 A1).

Claim 27. Schwartz discloses the method of claim 23, but Schwartz does not disclose the display device checks whether the respective media player needed to play the particular video file already is loaded in the display device before obtaining a copy of the

media player over the Internet, as disclosed in the claims. However, Schwartz discloses "Some media content types may require the user to obtain and/or install an associated media player application and/or a plug-in program, but typically the associated media player application and/or the plug-in program are also available at no cost to the user. Thus, media content sites provide the user with a convenient means to access internet media content and to use the internet media content within the webpages provided by the websites." (paragraph 0004), "The internal list may include portable media playback devices which are not currently connected to and/or available to the application 10. For example, the internal list may include portable media playback devices which have previously been connected to the application 10, which have been configured by the user 40, and/or which are otherwise known to the application 10." (paragraph 0121). Therefore, considering the teachings of Schwartz, it would have been obvious to one having ordinary skill in the art at the time of the invention to add the display device checks whether the respective media player needed to play the particular video file already is loaded in the display device before obtaining a copy of the media player over the Internet to the teachings of Schwartz. One would have been motivated to add the display device checks whether the respective media player needed to play the particular video file already is loaded in the display device before obtaining a copy of the media

player over the Internet to the teachings of Schwartz in order to provide users with a convenient means to access internet media content.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JOHN HEFFINGTON whose telephone number is (571)270-1696. The examiner can normally be reached on 8:30 am to 5:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Boris M. Pesin can be reached on 571-272-4070. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

session cookie

Like 6 0 1

Also called a *transient cookie*, a cookie that is erased when the user closes the Web browser. The session cookie is stored in temporary memory and is not retained after the browser is closed. Session cookies do not collect information from the user◆◆s computer. They typically will store information in the form of a session identification that does not personally identify the user.

Compare with *persistent cookie*.

user session

Like 1 0 0

(1) The session of activity that a user with a unique IP address spends on a Web site during a specified period of time. The number of user sessions on a site is used in measuring the amount of traffic a Web site gets. The site administrator determines what the time frame of a user session will be (e.g., 30 minutes). If the visitor comes back to the site within that time period, it is still considered one user session because any number of visits within that 30 minutes will only count as one session. If the visitor returns to the site after the allotted time period has expired, say an hour from the initial visit, then it is counted as a separate user session.

Contrast with unique visitor, hit, click-through and page view, which are all other ways that site administrators measure the amount of traffic a Web site gets.

(2) The period of time a user interfaces with an application. The user session begins when the user accesses the application and ends when the user quits the application.

View Full Version : Best way to generate Random, Unique Session ID's

Lorddraco98 Mon 2nd Dec '02, 9:08pm

i'm working on building a user object for a website I'm working on. In the user object, userid and sessionid must be stored into a cookie and then sent to the user. The userid and sessionid along with info about the user(IP, username, etc) are inserted into a MySQL DB. I'm looking for a way to generate a random, unique sessionid that PHP can make, store in the DB, insert into that cookie, and can also use to look up a user in the DB. So what's the best way to generate a random, unique session ID with PHP??

Gamefreak Wed 4th Dec '02, 4:47pm

use the function uniqid(val$)

the val$ can be blank, but if you put something in there it will have that val$ in the id. After you do that, then put the result through md5(), it will give you good session ids.

Scott MacVicar Wed 4th Dec '02, 8:19pm

The userid and sessionid along with info about the user(IP, username, etc) are inserted into a MySQL DB. I'm looking for a way to generate a random, unique sessionid that PHP can make, store in the DB, insert into that cookie, and can also use to look up a user in the DB. So what's the best way to generate a random, unique session ID with PHP?? just try and shove as much random stuff into md5, i use the following

```
md5(uniqid(microtime()) . $_SERVER['REMOTE_ADDR'] . $_SERVER['HTTP_USER_AGENT']);
```

Subject: Private PAIR Correspondence Notification for Customer Number 26211

Dec 08, 2011 05:25:55 AM

Dear PAIR Customer:

FISH & RICHARDSON P.C. (NY)
P.O. BOX 1022
MINNEAPOLIS, MN 55440-1022
UNITED STATES

The following USPTO patent application(s) associated with your Customer Number, 26211 , have new outgoing correspondence. This correspondence is now available for viewing in Private PAIR.

The official date of notification of the outgoing correspondence will be indicated on the form PTOL-90 accompanying the correspondence.

Disclaimer:
The list of documents shown below is provided as a courtesy and is not part of the official file wrapper. The content of the images shown in PAIR is the official record.

Application	Document	Mailroom Date	Attorney Docket No.
13245001	CTNF	12/08/2011	30160-0002002

session cookie

Like 6 0 1

Also called a *transient cookie*, a cookie that is erased when the user closes the Web browser. The session cookie is stored in temporary memory and is not retained after the browser is closed. Session cookies do not collect information from the user's computer. They typically will store information in the form of a session identification that does not personally identify the user.

Compare with *persistent cookie*.

user session

Like 1 0 0

(1) The session of activity that a user with a unique IP address spends on a Web site during a specified period of time. The number of user sessions on a site is used in measuring the amount of traffic a Web site gets. The site administrator determines what the time frame of a user session will be (e.g., 30 minutes). If the visitor comes back to the site within that time period, it is still considered one user session because any number of visits within that 30 minutes will only count as one session. If the visitor returns to the site after the allotted time period has expired, say an hour from the initial visit, then it is counted as a separate user session.

Contrast with unique visitor, hit, click-through and page view, which are all other ways that site administrators measure the amount of traffic a Web site gets.

(2) The period of time a user interfaces with an application. The user session begins when the user accesses the application and ends when the user quits the application.

View Full Version : Best way to generate Random, Unique Session ID's

Lorddraco98 Mon 2nd Dec '02, 9:08pm

I'm working on building a user object for a website I'm working on. In the user object, userid and sessionid must be stored into a cookie and then sent to the user. The userid and sessionid along with info about the user(IP, username, etc) are inserted into a MySQL DB. I'm looking for a way to generate a random, unique sessionid that PHP can make, store in the DB, insert into that cookie, and can also use to look up a user in the DB. So what's the best way to generate a random, unique session ID with PHP??

Gamefreak Wed 4th Dec '02, 4:47pm

use the function uniqid(val$)

the val$ can be blank, but if you put something in there it will have that val$ in the id. After you do that, then put the result through md5(), it will give you good session ids.

Scott MacVicar Wed 4th Dec '02, 8:19pm

I'm looking for a way to generate a random, unique sessionid that PHP can make, store in the DB, insert into that cookie, and can also use to look up a user in the DB. So what's the best way to generate a random, unique session ID with PHP?? just try and shove as much random stuff into md5, I use the following

```
md5(uniqid(microtime()) . $_SERVER['REMOTE_ADDR'] . $_SERVER['HTTP_USER_AGENT']);
```

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

PATDOCTC@fr.com

Office Action Summary	Application No.	Applicant(s)	
	13/245,001	STROBER, DAVID	
	Examiner	Art Unit	
	JOHN HEFFINGTON	2172	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE *3* MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1)☒ Responsive to communication(s) filed on *26 September 2011*.

2a)☐ This action is **FINAL**. 2b)☒ This action is non-final.

3)☐ An election was made by the applicant in response to a restriction requirement set forth during the interview on _____; the restriction requirement and election have been incorporated into this action.

4)☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

5)☒ Claim(s) *1-27* is/are pending in the application.

5a) Of the above claim(s) _____ is/are withdrawn from consideration.

6)☐ Claim(s) _____ is/are allowed.

7)☒ Claim(s) *1-27* is/are rejected.

8)☐ Claim(s) _____ is/are objected to.

9)☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

10)☐ The specification is objected to by the Examiner.

11)☒ The drawing(s) filed on *26 September 2011* is/are: a)☒ accepted or b)☐ objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

12)☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

13)☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

a)☐ All b)☐ Some * c)☐ None of:

1.☐ Certified copies of the priority documents have been received.

2.☐ Certified copies of the priority documents have been received in Application No. _____.

3.☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

3) ☒ Information Disclosure Statement(s) (PTO/SB/08) Paper No(s)/Mail Date *9/26/11*.
4) ☐ Interview Summary (PTO-413) Paper No(s)/Mail Date. _____ .
5) ☐ Notice of Informal Patent Application
6) ☐ Other: _____.

DETAILED ACTION

This action is in response to the original filing dated 26 September 2011. Claims 1-27 are pending and have been considered below.

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

> Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 12-21 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 12-21 are drawn to a system. The claimed system does not exclude a system composed entirely of software. Software per se is none of a process, machine, manufacture or composition of matter, and, therefore is not a statutory category of invention.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

> A person shall be entitled to a patent unless –
>
> (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-10, 12-26 are rejected under 35 U.S.C. 102(e) as being anticiptated by Schwartz et al. (US 2011/00600998 A1).

Claim 1. Schwartz discloses a machine-implemented method of controlling presentation of video content on a display device, the method comprising:

a. receiving, in a server system, one or more signals from a personal computing device, the one or more signals specifying a video file to be acted upon and identifying a media player for playing the video content (paragraph 0095 [In an embodiment, the application 10 may be a self-contained software application for a personal computer, a laptop personal computer, a PDA, a mobile phone and/or another computing device which is capable of running software applications.], paragraph 0097 [The media content may be and/or may have image content, audio content, video content and/or the like.], paragraph 0114 [The application 10 may have a media server component 100 which may transfer the media content to one or more of the media destinations 21,22,23 in the network 20.], paragraph 0137 [The media server component 100 may receive request messages from the target rendering device which may request the transcoded, reformatted and/or repurposed internet media content. The request messages from the target rendering device may request specific portions of the transcoded, reformatted and/or repurposed internet media content.], paragraph 0156 [The media capabilities

of the media library may specify the media which is compatible with the associated media player and/or which is appropriate for use with the associated media management application.]),

b. the one or more signals further including a command for controlling the presentation of the video content on the display device (paragraph 0137 [The media server component 100 may receive request messages from the target rendering device which may request the transcoded, reformatted and/or repurposed internet media content. The request messages from the target rendering device may request specific portions of the transcoded, reformatted and/or repurposed internet media content.]),

c. converting, by the server system, the command into corresponding programming code used by the display device to control the media player (paragraph 0122 [As a result, the one or more media content objects may be requested, may be retrieved, may be transcoded, may be reformatted, and/or may be repurposed for transfer to the portable media playback device.]); and

d. storing, in a database associated with the server system, a message for transmission to or retrieval by the display device (paragraph 0156 [One or more of the media destinations may be, for example, a media library, a local media server and/or a media storage device

to which the media content object may be downloaded, copied and/or stored. The media library may be associated with a media player and/or a media management application. The media capabilities of the media library may specify the media which is compatible with the associated media player and/or which is appropriate for use with the associated media management application.]), wherein

e. the message specifies the video file to be acted upon, identifies the media player for playing the video content (paragraph 0156 [One or more of the media destinations may be, for example, a media library, a local media server and/or a media storage device to which the media content object may be downloaded, copied and/or stored. The media library may be associated with a media player and/or a media management application. The media capabilities of the media library may specify the media which is compatible with the associated media player and/or which is appropriate for use with the associated media management application.]), and

f. includes the corresponding programming code used by the display device to control the media player in accordance with the command (paragraph 0122 [As a result, the one or more media content objects may be requested, may be retrieved, may be transcoded, may be

reformatted, and/or may be repurposed for transfer to the portable media playback device.], paragraph 0271 [As generally shown at step 725, the application 10 may determine a subset of the identified media content objects which may be suitable for transmittal to and/or rendering by the selected media destination. For example, the application 10 may use user preferences, user input, properties of the identified media content objects and/or the media capabilities of the media destinations to determine the subset of the identified media content objects which may be suitable for transmittal to and/or rendering by the selected media destination.]).

Claim 2. Schwartz discloses the method of claim 1 and Schwartz further discloses:

a. checking, in the server system, the identity of the media player identified in the one or more signals from the personal computing device paragraph 0156 [The media capabilities of the media library may specify the media which is compatible with the associated media player and/or which is appropriate for use with the associated media management application.]);

b. loading an appropriate set of protocols or application programming interfaces from a library based on the identity of the media player (paragraph 0120 [The

DDC component 110 may exchange protocol messages with the portable media playback devices to determine the capabilities of the portable media playback devices and/or other properties of the portable media playback devices.]); and

c. converting the command from the personal computing device into a corresponding JavaScript code used by the display device to control the media player (paragraph 0141 [The scripts and/or the active objects may include, for example, JavaScript,]).

Claim 3. Schwartz discloses the method of claim 1 and Schwartz further discloses converting the command into corresponding programming code used by the display device to control the media player includes using information in a look-up table (paragraph 0116 [The DDC component 110 may consult additional sources, such as, for example, a capabilities database to determine the capabilities and/or the additional capabilities of the available rendering devices.]).

Claim 4. Schwartz discloses the method of claim 3 and Schwartz further discloses the command contained in the one or more signals from the personal computing device is in

the form of a universal command (paragraph 0122 [As a result, the one or more media content objects may be requested, may be retrieved, may be transcoded, may be reformatted, and/or may be repurposed for transfer to the portable media playback device.]), and wherein the look-up table stores a plurality of specific commands, each of which represents, respectively, a corresponding command for a particular media player (paragraph 0116 [The DDC component 110 may consult additional sources, such as, for example, a capabilities database to determine the capabilities and/or the additional capabilities of the available rendering devices.]).

Claim 5. Schwartz discloses the method of claim 1 and Schwartz further discloses the command contained in the one or more signals from the personal computing device is in the form of a universal command (paragraph 0122 [As a result, the one or more media content objects may be requested, may be retrieved, may be transcoded, may be reformatted, and/or may be repurposed for transfer to the portable media playback device.]), and wherein converting the command includes selecting from among a plurality of specific commands, each of which represents, respectively, a corresponding command for a particular media player (paragraph 0116 [The DDC component 110 may consult additional sources, such as, for example, a capabilities

database to determine the capabilities and/or the additional capabilities of the available rendering devices.]).

Claim 6. Schwartz discloses the method of claim 1 and Schwartz further discloses the universal command represents an instruction to play the video content, to stop playing the video content or to pause playing the video content (paragraph 0119 [The rendering control instructions may correspond to the playback controls, such as, for example, "Play," "Pause," "Stop," "Rewind," "Fast Forward," "Seek to a specific time," "Volume Up," "Volume Down," "Skip to the next media content object," "Skip to the previous media content object", "Jump to a specified media content object," and/or other playback controls known to one having ordinary skill in the art.]).

Claim 7. Schwartz discloses the method of claim 1 and Schwartz further discloses the video content is an interactive video game (paragraph 0100 [The media destinations 21,22,23 may be, for example, available rendering devices to which media content may be sent; ... a portable gaming device]).

Claim 8. Schwartz discloses the method of claim 1 and Schwartz further discloses the video content is streaming media (paragraph 0097 [The media content may be

and/or may have image content, audio content, video content and/or the like. … The media content sites may provide the media content to the application 10 using well-known internet delivery protocols, such as, for example, Hypertext Transfer Protocol ("HTTP"), Real Time Streaming Protocol ("RTSP"),]).

Claim 9. Schwartz discloses the method of claim 1 and Schwartz further discloses: receiving, in the server system, a code from the personal computing device, wherein the code is uniquely associated with the display device on which the video content is to be played (paragraph 0156 [The media capabilities of the media library may specify the media which is compatible with the associated media player and/or which is appropriate for use with the associated media management application.]); and storing in the server system a record establishing a connection between the personal computing device and the display device based on the code (paragraph 0036 [In an embodiment, the method has the step of displaying a visual representation for each of a plurality of rendering devices connected to the network wherein the terminal concurrently displays the first webpage, the first set of symbolic representations and the visual representation for each of the plurality of rendering devices.]).

Claim 10. Schwartz discloses the method of claim 9 and Schwartz further discloses the code is different from an IP address associated with the display device and is different from a MAC address associated with the display device (paragraph 0120 [The DDC component 110 may exchange protocol messages with the portable media playback devices to determine the capabilities of the portable media playback devices and/or other properties of the portable media playback devices. The other properties may be, for example, a manufacturer name, a model number, a description, a graphic representation, and/or like properties of the portable media playback devices.]).

Claim 12 discloses a system for controlling playing of video content on a display device similar to the machine-implemented method of claim 1 and is rejected with the same rational. Schwartz further discloses a first database storing a relationship between a personal computing device and the display device (paragraph 0116 [devices. The DDC component 110 may consult additional sources, such as, for example, a capabilities database to determine the capabilities and/or the additional capabilities of the available rendering devices.], paragraph 0156 [The media capabilities of the media library may specify the media which is compatible with the associated media player and/or which is appropriate for use with

the associated media management application.]). Claims 13, 14, 15, 17, 18, 19, 20, 21 are similarly rejected with the same rational as claims 2, 4, 5, 6, 7, 8, 9, 10.

Claim 16. Schwartz discloses the system of claim 15 and Schwartz further discloses the server system is operable to convert the universal command by selecting from among the plurality of specific commands stored in the look-up table (paragraph 0116 [The DDC component 110 may consult additional sources, such as, for example, a capabilities database to determine the capabilities and/or the additional capabilities of the available rendering devices.], paragraph 0119 [The rendering control instructions may correspond to the playback controls, such as, for example, "Play," "Pause," "Stop," "Rewind," "Fast Forward," "Seek to a specific time," "Volume Up," "Volume Down," "Skip to the next media content object," "Skip to the previous media content object", "Jump to a specified media content object," and/or other playback controls known to one having ordinary skill in the art.], paragraph 0122 [As a result, the one or more media content objects may be requested, may be retrieved, may be transcoded, may be reformatted, and/or may be repurposed for transfer to the portable media playback device.]).

Claim 23. Schwartz discloses an automated machine-implemented method of presenting video content on a display device, the method comprising:

a. retrieving, by the display device, first information that specifies a first video file to be acted upon, that identifies a first media player for playing the first video file, and that indicates corresponding programming code used by the display device to control the first media player in accordance with a first command (paragraph 0095 [In an embodiment, the application 10 may be a self-contained software application for a personal computer, a laptop personal computer, a PDA, a mobile phone and/or another computing device which is capable of running software applications.], paragraph 0097 [The media content may be and/or may have image content, audio content, video content and/or the like.], paragraph 0114 [The application 10 may have a media server component 100 which may transfer the media content to one or more of the media destinations 21,22,23 in the network 20.], paragraph 0122 [As a result, the one or more media content objects may be requested, may be retrieved, may be transcoded, may be reformatted, and/or may be repurposed for transfer to the portable media playback device.], paragraph 0137 [The media server component 100 may receive request messages from the target rendering device which may request the transcoded, reformatted and/or

repurposed internet media content. The request messages from the target rendering device may request specific portions of the transcoded, reformatted and/or repurposed internet media content.], paragraph 0156 [The media capabilities of the media library may specify the media which is compatible with the associated media player and/or which is appropriate for use with the associated media management application.]);

b. obtaining, by the display device, over the Internet the first media player for playing the first video file, loading the first media player in the display device (paragraph 0004 [Some media content types may require the user to obtain and/or install an associated media player application and/or a plug-in program, but typically the associated media player application and/or the plug-in program are also available at no cost to the user. Thus, media content sites provide the user with a convenient means to access internet media content and to use the internet media content within the webpages provided by the websites.]);

c. executing the first command with respect to the first video file using the first media player (paragraph 0122 [As a result, the one or more media content objects may be requested, may be retrieved, may be

transcoded, may be reformatted, and/or may be repurposed for transfer to the portable media playback device.]);

d. subsequently retrieving, by the display device, second information that specifies a second video file to be acted upon, that identifies a second media player for playing the second video file, and that indicates corresponding programming code used by the display device to control the second media player in accordance with a second command; obtaining, by the display device, over the Internet the second media player for playing the second video file; loading the second media player in the display device; and executing the second command with respect to the second video file using the second media player (paragraph 0204 [The controls presented in the workspace area may enable the user 40 to save the playlist, play and/or listen to music associated with the playlist using the device which hosts the application 10, and/or redirect the music associated with the playlist to a rendering device in the home network.], paragraph 0234 [FIG. 10 generally illustrates the symbolic representations 315 for the identified media content objects of webpage tabs 360 in an embodiment of the present invention. The symbolic representations 315 for the identified media content objects of the webpage tabs 360 may be displayed in the workspace area 325. As known to one having ordinary skill in the art, the webpage tabs 360 may

enable the webpages corresponding to the webpage tabs 360 to be open simultaneously in the user interface 300.]).

Claim 24. Schwartz discloses the method of claim 23 and Schwartz further discloses the display device comprises a television set with a display screen (paragraph 0024 [The home network may have various rendering devices, such as, for example, networked stereos, televisions,]).

Claim 25. Schwartz discloses the method of claim 23 and Schwartz further discloses the display device comprises a laptop or personal computer (paragraph 0024 [The home network may have various rendering devices, such as, for example, networked stereos, televisions, personal computers,]).

Claim 26. Schwartz discloses the method of claim 23 and Schwartz further discloses each of the first and second commands represents an instruction to play the respective video file, to stop playing the respective video file or to pause playing the respective video file (paragraph 0119 [The rendering control instructions may correspond to the playback controls, such as, for example, "Play," "Pause," "Stop," "Rewind," "Fast Forward," "Seek to a specific time," "Volume Up," "Volume Down," "Skip to the next media content object," "Skip to the previous media content object", "Jump to a specified media content object," and/or

other playback controls known to one having ordinary skill in the art.]).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

> (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

5. Claims 11, 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schwartz et al. (US 2011/00600998 A1) in view of www.vbulletin.com (Best way to generate Random, Unique Session ID's), hereinafter referred to as vbulletin.

Claim 11. Schwartz discloses the method of claim 9 and Schwartz further discloses "In an embodiment, the method has the step of displaying page selection controls which indicate that multiple webpages are available in a current web browsing session wherein the page selection controls enable the user to select any of the multiple webpages for display and further wherein one or more of the symbolic representations depict additional media content objects associated with a second webpage which is one of the multiple webpages wherein the second webpage is a different webpage than the first webpage." (paragraph 0064). Schwartz does not disclose assigning a

randomly generated code to the display device each time the display device connects to the server system, as disclosed in the claims. However, in the same field of invention, vbulletin discloses “Best way to generate Random, Unique Session ID’s” (title). Therefore, considering the teachings of Schwartz and vbullettin, it would have been obvious to one having ordinary skill in the art at the time of the invention to add assigning a randomly generated code to the display device each time the display device connects to the server system to the teachings of Schwartz. One would have been motivated to add assigning a randomly generated code to the display device each time the display device connects to the server system to the teachings of Schwartz to ensure that each user is assigned a unique session ID such that there is no conflicting user sessions from different users.

Claim 22 discloses a system for controlling playing of video content on a display device similar to the machine-implemented method of claim 11 and is rejected with the same rational.

6. Claim 27 is rejected under 35 U.S.C. 103(a) as being unpatentable over Schwartz et al. (US 2011/00600998 A1).

Claim 27. Schwartz discloses the method of claim 23, but Schwartz does not disclose the display device checks whether the respective media player needed to play the particular video file already is loaded in the display device before obtaining a copy of the

media player over the Internet, as disclosed in the claims. However, Schwartz discloses "Some media content types may require the user to obtain and/or install an associated media player application and/or a plug-in program, but typically the associated media player application and/or the plug-in program are also available at no cost to the user. Thus, media content sites provide the user with a convenient means to access internet media content and to use the internet media content within the webpages provided by the websites." (paragraph 0004), "The internal list may include portable media playback devices which are not currently connected to and/or available to the application 10. For example, the internal list may include portable media playback devices which have previously been connected to the application 10, which have been configured by the user 40, and/or which are otherwise known to the application 10." (paragraph 0121). Therefore, considering the teachings of Schwartz, it would have been obvious to one having ordinary skill in the art at the time of the invention to add the display device checks whether the respective media player needed to play the particular video file already is loaded in the display device before obtaining a copy of the media player over the Internet to the teachings of Schwartz. One would have been motivated to add the display device checks whether the respective media player needed to play the particular video file already is loaded in the display device before obtaining a copy of the media

player over the Internet to the teachings of Schwartz in order to provide users with a convenient means to access internet media content.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JOHN HEFFINGTON whose telephone number is (571)270-1696. The examiner can normally be reached on 8:30 am to 5:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Boris M. Pesin can be reached on 571-272-4070. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

PLAY CONTROL OF CONTENT ON A DISPLAY DEVICE

CROSS-REFERENCE TO RELATED APPLICATION(S)

This application is a continuation of U.S. Application No. 13/157,821, filed on June 10, 2011, which in turn claims the benefit of priority of U.S. Provisional Patent Application No. 61/477,998, filed on April 21, 2011.

BACKGROUND

This disclosure relates to play control of content on a display device. Such display devices include, for example, television displays used by consumers in their home for viewing videos and other media that are either provided from the Web or previously stored. In particular, the disclosure relates to the creation, storage, manipulation and access of media playlists used in conjunction with display devices and control of the display devices.

Web media often is played on computers rather than television displays. Although it is known to connect a computer to a television set in order to watch Web media, it is difficult to control such a system within the typical scenario for television watching where the viewer is positioned some distance from the television. Furthermore, although a wireless device can enable the user to control the television from a distance, it can be difficult to view a web browser display on the television set and may interfere with normal television program viewing by other persons.

Given the desire to watch various World Wide Web media on a family's primary television set, and to control this operation from the comfort of one's couch, there is a need to operate a television set or other display remotely from a personal computing device, such as a mobile phone. It also is desirable to allow a user to perform a general Web search to locate and capture Web media, and to control a television or other display remotely using the personal computing device.

SUMMARY

Various aspects of the invention are set forth in the claims.

For example, according to one aspect, a system for presenting and controlling content on a display device includes a network, a server system coupled to the network and comprising one or more servers, a display device coupled to the network and having a display, and a personal computing device operable to transmit a first message according to a specified format over the network to the server system. The server system stores an association between the personal computing device and the display device. The first message identifies user-selected content and a media player to play the content. The server system is operable, in response to receiving the first message from the personal computing device, to provide to the display device a second message identifying the user-selected content and the media player to play the content. In response to receiving the second message, the display device is operable to obtain a first media player needed to play the content, to load the media player and to present the content on the display.

In some implementations, the display device is operable, in response to receiving the second message, to obtain the first media player from the content provider only if the first media player is not already loaded in the display device.

In some implementations, the personal computing device is operable to transmit a message according to a specified format over the network to the server system. The message can include a command for controlling playing of the content on the display device. The server system is operable, in response to receiving the message, to convert the command into a corresponding command recognizable by the media player if the command received from the personal computing device is not recognizable by the media player. The server system is operable to provide to the display device a message that includes the corresponding command, and the display device is operable, in response to receiving the message from the server system, to execute the command.

In some implementations, the personal computing device is, for example, a mobile phone, and the display device is a television set. Other personal computing devices or display devices can be used in other implementations. The network can include, for example, the Internet.

In some implementations, the server system stores a look-up table that includes a synchronization code uniquely associated with the display device. A message from the personal computing device can include the synchronization code, and in response to

receiving the message from personal computing device, the server system can use the synchronization code and the look-up table to identify the display device on which the content is to be played. The synchronization code can be different from an IP address associated with the display device and/or a media access control address associated with the display device.

In various implementations, the system can facilitate allowing a personal computing device to be used to select different content to be played on a remote display even if different media players are required to present the different content. The system also can allow the user to control how the content is displayed on the display device using the personal computing device. For example, user-initiated play commands can be passed from the user's personal computing device, through the server system, to the display device.

Other aspects, features and advantages will be apparent from the following detailed description, the accompanying drawings, and the claims.

BRIEF DECSRIPTION OF THE DRAWINGS

FIG. 1 is a block diagram illustrating an example of a system according to the invention.

FIG. 2 illustrates various details of the flow of information and signals according to some implementations.

FIG. 3 illustrates an example of a transmission code incorporated into a message from a personal computing device.

FIG. 4 illustrates an example of a look-up table that forms part of a server system.

FIG. 5 illustrates an example of entries in a universal API adapter.

FIG. 6 is a flow chart showing steps for display device to load a video player and video.

FIG. 7A illustrates an example of a display device including a synchronization code.

FIG. 7B illustrates an example of a synchronization code look-up table.

FIGS. 8-13 illustrate examples of various scenarios in which the invention can be used.

FIGS. 14A through 14E illustrate examples of display screens that may appear on a user's personal computing device in accordance with the invention.

FIG. 15 illustrates further information that can be stored in the look-up table in the server system.

DETAILED DESCRIPTION

As shown in FIG. 1, a system 10 facilitates synchronizing a connection between two or more devices 20, 22 connected to the Internet 21 or other computer network. The connection is designed to be made by a first device (e.g., a personal computing device) 20 that acts as a controller and a second device (e.g., a television set 22 with a display 23) that acts as a receiver to play content selected by a user of the first device and to respond to commands that originate at the personal computing device. The personal computing device 20 is operable to display an application or web site that contains information and links to content providers 30 on the Internet 21. The television set 22 is operable to link back to a server system 24 from which the television set receives commands. When a user makes a selection using the personal computing device 20 for particular content to be displayed on the television display 23, a signal is sent through the Internet (or other network) 21 to the server system 24. A corresponding command signal then is passed along to the connected television set 22, which acts on a transmission code contained within the signal and performs specified commands. For example, in some scenarios, the command instructs the television set 22 to access a content provider 30 through the Internet 21, load a specific media player, load the media player-specific content (e.g., a video) and play the content on the television display 23. The user can use the personal computing device 20 to control how the content is played on the television display 23. The user may subsequently visit the same or another Web site using the personal computing device 20 to select different content (e.g., a second video) to be played on the television display 23. In that case, another signal would be sent through the server system 24 to the television set 22. A transmission code associated with this command signal instructs the television set 22 to load a new media player (if needed) over the Internet and to load the specified video file to be played on the display 23. Thus, the system 10 allows a personal computing device 20 to be used to select different content to

be played on a remote display 23 even if different media players are required for the different content. The user also can control how the content is displayed (e.g., play, pause, stop, rewind, fast forward, etc.) on the display 23 using the personal computing device 20. The user-initiated play commands are passed from the user's personal computing device 20, through the server system 24, to the television set 22.

Although the following detailed discussion describes videos as an example of the type of content to be played on the display 23, the system 10 can be used for other types of content as well. Thus, depending on the implementation, the content may include one or more of the following: video, audio, interactive video game, streaming media, multimedia, images, slides (e.g., a PowerPoint presentation) or other types of dynamic content. Furthermore, in the following discussion, it is assumed that the personal computing device 20 is a mobile phone that includes a display, an internal microprocessor or other processing circuitry, a keypad, keyboard, touchscreen, mouse, trackball, or other device to receive user selections and other input, and a transceiver to establish communications to the Internet 21 or other communications networks. More generally, however, the personal computing device 20 can be any type of handheld or other Internet-enabled personal computing device, including personal computers, e-books, kiosks, tablets, smart phones, media players, and motion and touch sensory interfaces. In some cases, input from the user can be received in forms other than tactile input (e.g., acoustic or speech).

FIG. 2 illustrates further details of the flow of information and signals according to some implementations. The personal computing device (e.g., mobile phone) 20 is operable to display an application or web site that contains information and links to content providers 30 on the Internet 21. The user operates the mobile phone 20 so as to start the application or access the web site (block 100). In some implementations, a logo appears on the mobile phone's display. By selecting the logo, the user causes a menu to expand and present various options. The options can include, for example: (i) add new content to a playlist, (ii) play a listed item on a secondary device, (iii) play a listed item on the mobile phone 20. If the user selects to add new content to the playlist, the user is presented with a screen that allows him to enter user-defined search parameters or o select predefined search parameters to request video data. The search parameters are sent

from the mobile phone 20 as part of a request for video data that satisfy the search parameters (block 102). The request is transmitted via the Internet 21 and through the server system 24 to the appropriate content provider web site. In response, the content provider 30 provides metadata (e.g., titles, links to the videos) for one or more video files that satisfy the search parameters (block 104). The metadata can be provided to the mobile phone 20, for example, in the form of an XML data file. Upon receiving the data file, the mobile phone 20 displays a list of one or more videos based on the information received from the content provider 30 (block 106).

If desired, the user can take one of several actions, including selecting one of the videos from the displayed list to be played on the television display 23 or initiating a command with respect to a video that already has been loaded to the television set 22 (block 108). The mobile phone 20 then formats and transmits a message to the server system 24 (block 110). The message from the mobile phone 20 contains a transmission code that includes data regarding the user information (e.g., user identification or account number), the secondary display it wants to connect to (e.g., television set 22 with display 23), the location and name of the media player for the selected video, the command (e.g., play, pause, rewind, etc.), and the video file to be acted upon. An example of the format of a transmission code from the mobile phone 20 to the server system 24 is illustrated in FIG. 3. Different formats and/or different information may be appropriate for other implementations.

The message from the mobile phone 20 is transmitted over the Internet 21 and is received by the server system 24 (block 112). Based on information in the message from the mobile phone 20, the server system 24 verifies that the user has an account (block 114), and the contents of the message, as well as the date and time of receipt of the message, are added to a personal computing device database 32 (block 116) which forms part of a switchboard 28. In general, all messages from a particular user's personal computing device 20 are stored in the database 32 corresponding to an account for the particular user. Thus, the database 32 stores a record of all messages received from a user's personal computing device 20, as well as the user's identification, an indication of the target device 22, an identification of the media player that is required for the selected video, and an identification of the selected video.

The switchboard 28 also includes a look-up table 34 that stores a correspondence between a particular personal computing device (such as mobile phone 20) and target devices (e.g., the television set 22) to which the user command is directed. An example of the look-up table 28 is illustrated in FIG. 4. In this example, it is assumed that, at most, a single connection is established at any given time between a particular mobile phone and a display device. However, as explained below, other scenarios are also possible to establish group connections (e.g., multiple mobile phones connected to the same display device). The server system 24 performs a target verification (block 118), which includes checking whether a connection to a particular display device already is established for the mobile phone 20 and, if so, checking the identification of the display device. During the target verification, if the look-up table indicates that there is no connection established between the mobile phone 20 and a particular display device, then the server system 24 sends a message to the mobile phone 20 to prompt the user to identify the device on which the video is to be displayed.

A user can identify the device on which the video is to be displayed in one of several ways, depending on the implementation. In some implementations, the user can select the display device from a list of devices displayed on the mobile phone 20. The list can include a field populated with names or identifications of display devices that previously have been initialized for connection. Alternatively, the user can select the display device by entering a synchronization code uniquely associated with the particular display device. As illustrated in FIG. 7A, the synchronization code 48 can be displayed, for example, on a splash page of the display device as text on the screen or as an image such as a QR code and can be entered into the mobile phone 20, for example, manually by the user or by scanning the code into the mobile phone. The code can be scanned, for example, using optical scanning or RFID techniques. Preferably, the synchronization code is different from the IP address associated with the device 22. The IP address also can be different from the media access control (MAC) address associated with the device 22. For example, in some implementations, the synchronization code is generated randomly and assigned to the display device 22 each time it connects to the server system 24. Thus, a particular display device 22 may have an IP address, a MAC address, a web or browser cookie, and a synchronization code ("sync code") assigned to it at any given

time. This information can be stored, for example, in a look-up table in the server system 24. An example of entries in such a look-up table are illustrated in FIG. 7B.

Once the synchronization code is entered into, or captured by, the mobile phone 20, it is sent from the mobile phone 20 to the server system 24, which stores the information in the look-up table 36 so as to establish a connection between the mobile phone 20 and the display device 22 through the server system 24.

Once a connection is established between the mobile phone 20 and the display device 22, signals sent from the mobile device 20 to its associated database 32 are copied to a database 34 associated with the target device (e.g., television set 24) based on the correspondence between the mobile device and the target device listed in the look-up table 36 (block 122). Thus, the database 32 entries associated with a particular display device (e.g., television set 24) provide a record of the messages received for that display device, as well as an indication of the identification of the device that sent each message, an indication of the media player required to play the video, and an indication of the selected video.

In the illustrated implementation, the command in the transmission code (see FIG. 3) contains a JavaScript reference to control the media player needed to play the selected video. Various types of video players may use different JavaScript commands to control their respective playback. Therefore, in the illustrated implementation, a universal adapter 26 is provided to interpret and convert a standard or universal command (e.g., play, pause, etc.) into the specific command recognized by the media player. Each time a signal is received from the mobile device 20, the API adapter 26 checks and identifies the specific media player that is being requested. Based on this information, the system loads the appropriate set of protocols or application programming interfaces (APIs) from its library and converts the incoming commands from the mobile device 20 into the correct JavaScript (or other programming) code used by the target device 22 to control the specific player (block 120). The server system 24 then copies the converted version of the message to the database 34 associated with the target device 22, as indicated above in connection with block 122.

The universal adapter 26 can be implemented, for example, as a look-up table. Examples of entries in such a look-up table are illustrated in FIG. 5. Thus, for a universal

command "New Video," the universal adapter 26 provides the corresponding command for each of several specific media players (e.g., "yt_loadVideo" for YouTube). Similarly, for a universal command "Pause," the universal adapter 26 provides the corresponding command for each of several specific media players (e.g., "pauseVideo" for Ted.com). Other universal commands and the corresponding command(s) for one of more media players also can be stored by the universal adapter 26.

The display device 22 periodically checks the entries in the database 34 to determine if there are any new messages/commands directed to it (block 124). For example, in some implementations, the display device 22 polls the associated database 34 at some predetermined time interval. In some implementations, instead of the display device 22 periodically checking whether there are any messages for it in the database 34, the server system 24 can push the messages to the display device 22. In any event, the system is arranged so that the display device 22 receives the messages intended for it.

When the display device 22 receives a message from the server system 24 (block 126), the display device executes the message (block 128). In some cases, the media player required to play the video indicated in the message is not presently loaded in the display device 22. For example, the received command may be to "play" a particular video. As indicated by FIG. 6, if the media player needed to play the video is not already loaded in the display device 22, the display device 22 requests and obtains a copy of the appropriate media player 40 and a copy of the video file 42 from a content provider 30, loads the media player and then presents the video on the display 23 (FIG. 2, block 130). Likewise, as indicated by FIG. 6, if the appropriate media player already is loaded in the display device, but the particular video is not, then the display device 22 requests and obtains a copy of the video file 42 from the content provider 30 and proceeds to play the video. To allow the display device 22 to switch between different video players (i.e., to load and unload different video players), a software program can be stored on the display device and/or the web site to establish a secure connection back to the server system 24.

Once the video is playing on the display device 22, the user of the mobile phone 20 can control the playing of the video by entering appropriate commands (e.g., pause, fast forward, rewind, stop, play, etc.) through the mobile phone. Each command is incorporated into a message including a transmission code (FIG. 3) as described above.

The message is transmitted to the server system 24, which copies the message into database entries associated with the particular display device 22 (i.e., after performing any conversion of the command by the API adapter 26). Once the message is retrieved by or sent to the display device 22, the display device proceeds to execute the command.

The system and methods described here allow a user of a mobile phone or other personal computing device to create a playlist based on videos (or other types of content) from multiple sources and to play back each video using a single interface that can be used to control different media players.

As mentioned above, the system and methods described above also can be used with types of content other than video. In that case, different types of user-initiated commands may be available to control the content displayed on the display 23. For example, for interactive video games, the user-initiated commands can include control commands appropriate for the particular game.

Although the implementation of FIG. 1 illustrates the display device 22 as a television set with a display screen 23, other types of display devices can be used as well (e.g., a laptop or personal computer).

The systems and methods can be used in various scenarios to play back videos (or other content). Examples of several scenarios that can be implemented using the system described above are described in the following paragraphs. For example, a first scenario involves a single user's smartphone connecting to a single display device (FIG. 8). In this scenario, the user turns on, for example, her display device (e.g., personal computer with a display monitor), opens up a browser and accesses a website associated with the server system 24. The user then clicks on a link that launches the software program to establish a secure connection back to the server system 24. The software program opens a splash page (see FIG. 14A), and a sync-code is displayed on the monitor. The user then opens the appropriate application on her smartphone. In the smartphone application, the user accesses a "Connect" screen from which he can select one of several listed display devices (see FIG. 14B). Alternatively, the user can enter the sync-code displayed on the computer monitor (see FIG. 14B). The user then clicks on a SEND button which causes a message including the sync-code to be sent the server system 24. In response, the server system 24 establishes a connection between the user's smartphone and the selected

display device through a look-up table as described above with respect to FIG. 4. The user can use a search tool in the smartphone application to find a video. In response to the search, a list of videos satisfying the search appears on the smartphone (see FIG. 14C). When the user selects a video from the list displayed on the smartphone, the information is provided through the server system 24 to the personal computer. In some implementations, a pop-up window may appear on the smartphone listing one or more options for the user to take regarding the selected video. Such options can include, for example, play the video on the selected display device (e.g., the personal computer), play the video on the smartphone, or add the video to the playlist on the smartphone. If the user chooses to have the video played on the display device (e.g., the personal computer), the personal computer obtains a copy of the required video player and the selected video from an appropriate content provider over the Internet and begins to play the video on the monitor as described previously. In some implementations, a message is displayed on the user's smartphone indicating that the selected video is playing and providing additional information about the selected video (see FIG. 14D). The user can control playing of the video (e.g., pause, fast forward, rewind, play, etc.) from her smartphone.

A second scenario involves saving a selected video to a playlist on a single user's smartphone, and subsequently playing the video on a display device (FIG. 9). In this scenario, the user opens the appropriate application on his smartphone and searches for videos using the search tool displayed in the application. When a list of videos is displayed on the smartphone in response to the search request, the user selects one or more videos to add to his playlist. At that time, or at a later time, the user can connect to a display device through the server system 24. To do so, the user opens the playlist on his smartphone and selects a video. The information is provided through the server system 24 to the display device, which obtains a copy of the required video player and the selected video from an appropriate content provider over the Internet and begins to play the video. The user can control playing of the video (e.g., pause, fast forward, rewind, play, etc.) from his smartphone.

A third scenario involves multiple users' smartphones and a single display device (FIG. 10). For example, a user may want to share and watch videos with a group of friends watching together on a single display device. In this situation, the user can access

the application or web site to set up a group and serve as the moderator for the group. The user then can send out a request to other members of the group, or other users can send a request to the moderator to join the group. Users can search for other users based, for example, on username or from a contact list. The moderator then can select a user in the group to control the display device. FIG. 14E illustrates an example of a screen on the user's smartphone that allows the user to connect with other users to form a group and to select which member of the group controls the display device (e.g., by selecting a member of the group from the list "Me, Guest 1, Guest 2, . . ." near the top of the screen). Alternatively, the moderator can set it up so that control is passed to each member of the group in turn automatically, or so that the next turn can be determined by consensus of the entire group, via some form of voting. Regardless of who has control of the display device 22, each user in the group retains control of his own smartphone. The look-up table 36 in the server system 24 stores the connections established between the personal computing devices of the users in the group and the display device (see FIG. 15).

A fourth scenario involves one user's smartphone and multiple display devices (FIG. 11). In this example, a user opens the application on his smartphone to establish a connection to a first display device and then repeats the process for multiple display devices. A list of devices that the user's smartphone is connected to is displayed on the smartphone. The user can choose to control all devices simultaneously or one at a time. To do so, the user selects from the list the display device(s) he wants to control. The user then can search for videos using his smartphone. In response to the user selecting a particular video, the selected video is played on the selected display device(s).

A fifth scenario involves multiple users' smartphones and multiple connected display devices (FIG. 12). For example, a user may want to share and watch videos with a group of friends, who may be in different locations each of which has a separate display device. Each user establishes a connection from her smartphone to the display device where she is located. One of the users uses the application or web site to establish a group, with the user who establishes the group serving as the group moderator. The user can send out a request to other users to join the group or other users can send a request to the moderator to join the group. In some implementations, users can search for other users based on username or from a contact list. The moderator chooses which member of

the group has control of the display device. Alternatively, the moderator can set it up control is passed to each member of the group in turn automatically, or so that the next turn can be determined by consensus of the entire group, via some form of voting. The signal sent from the smartphone of the group member who has control is sent (via the server system 24) to all display devices within the group. Regardless of which group member has control of the display devices, each user retains control of her own smartphone. The look-up table 36 in the server system 24 stores the connections established between the personal computing devices of the users in the group and the display devices (see FIG. 15).

A sixth scenario involves sharing video links and a playlist (FIG. 13). For example, a user within a group can share a video playlist and video links via an Instant messaging system built-in to the application. Users also can post video links or a video playlist to third-party web sites (e.g., social networking sites). Other users can view the video link and playlist within the application. When a video from the list is selected, it plays on the selected device.

The system and methods can be used by a wide variety of users in addition to individual viewers. For example, companies that provide on-line video platforms that host videos for other individuals or companies can obtain useful advantages by integrating the platforms with the server system 24. Programming hooks can be created in the API so that the on-line video platform's media player can communicate with the server system 24. When media player commands for an on-line video platform are added to the system 24, the media player's API is placed in an API library and is stored in the API adapter 26. The on-line video platform can then offer customers the ability to add videos to their own mobile web sites that are enabled to operate with the server system 24.

The system and methods also can be used by content providers. For example, the content provider may want to deliver its media on-line. The content provider can use an on-line video platform that is enabled to operate with the server system 24. In some implementations, the content provider is allowed to add links to videos for that web site (i.e., mobile site or an application). The link facilitates synchronization to the secondary

device 22 (e.g., a television set) and allows the end-user to load and control the video on the secondary device.

As used in this disclosure, terms such as "first," "second," etc. with respect to the messages are used simply as labels to distinguish the various messages from one another. Such terms do not imply that there cannot be any other messages prior to the first message or that there cannot be other messages between the first and second messages.

Implementations of the subject matter and the operations described in this specification can include digital electronic circuitry, or in computer software, firmware, or hardware, including the structures disclosed in this specification and their structural equivalents, or in combinations of one or more of them. Implementations of the subject matter described in this specification can include one or more computer programs, i.e., one or more modules of computer program instructions, encoded on computer storage medium for execution by, or to control the operation of, data processing apparatus. Alternatively or in addition, the program instructions can be encoded on an artificially-generated propagated signal, e.g., a machine-generated electrical, optical, or electromagnetic signal that is generated to encode information for transmission to suitable receiver apparatus for execution by a data processing apparatus. A computer storage medium can be, or can be included in, a computer-readable storage device, a computer-readable storage substrate, a random or serial access memory array or device, or a combination of one or more of them. Moreover, while a computer storage medium is not a propagated signal, a computer storage medium can be a source or destination of computer program instructions encoded in an artificially-generated propagated signal. The computer storage medium can also be, or be included in, one or more separate physical components or media (e.g., multiple CDs, disks, or other storage devices).

The operations described in this specification can include operations performed by a data processing apparatus on data stored on one or more computer-readable storage devices or received from other sources. The term "data processing apparatus" encompasses all kinds of apparatus, devices, and machines for processing data, including by way of example a programmable processor, a computer, a system on a chip, or multiple ones, or combinations, of the foregoing. The apparatus and execution

environment can realize various different computing model infrastructures, such as web services, distributed computing and grid computing infrastructures.

A computer program (also known as a program, software, software application, script, or code) can be written in any form of programming language, including compiled or interpreted languages, declarative or procedural languages, and it can be deployed in any form, including as a stand-alone program or as a module, component, subroutine, object, or other unit suitable for use in a computing environment. A computer program may, but need not, correspond to a file in a file system. A program can be stored in a portion of a file that holds other programs or data (e.g., one or more scripts stored in a markup language document), in a single file dedicated to the program in question, or in multiple coordinated files (e.g., files that store one or more modules, sub-programs, or portions of code). A computer program can be deployed to be executed on one computer or on multiple computers that are located at one site or distributed across multiple sites and interconnected by a communication network.

Processors suitable for the execution of a computer program include, by way of example, both general and special purpose microprocessors, and any one or more processors of any kind of digital computer. Generally, a processor will receive instructions and data from a read-only memory or a random access memory or both. Elements of a computer include a processor for performing actions in accordance with instructions and one or more memory devices for storing instructions and data.

Generally, a computer will also include, or be operatively coupled to receive data from or transfer data to, or both, one or more mass storage devices for storing data, e.g., magnetic, magneto-optical disks, or optical disks. However, a computer need not have such devices. Moreover, a computer can be embedded in another device, e.g., a mobile telephone, a personal digital assistant (PDA), a mobile, audio or video player, a game console, a Global Positioning System (GPS) receiver, or a portable storage device (e.g., a universal serial bus (USB) flash drive), to name just a few. Devices suitable for storing computer program instructions and data include all forms of non-volatile memory, media and memory devices, including by way of example semiconductor memory devices, e.g., EPROM, EEPROM, and flash memory devices; magnetic disks, e.g., internal hard disks or removable disks; magneto-optical disks; and CD-ROM and DVD-ROM disks. The

processor and the memory can be supplemented by, or incorporated in, special purpose logic circuitry.

Although this specification contains many specific implementation details, these should not be construed as limitations on the scope of any inventions or of what may be claimed, but rather as descriptions of features specific to particular implementations of particular inventions. Certain features that are described in this specification in the context of separate implementations can also be implemented in combination in a single implementation. Conversely, various features that are described in the context of a single implementation can also be implemented in multiple implementations separately or in any suitable subcombination. Moreover, although features may be described above as acting in certain combinations and even initially claimed as such, one or more features from a claimed combination can in some cases be excised from the combination, and the claimed combination may be directed to a subcombination or variation of a subcombination.

Similarly, while operations are depicted in the drawings in a particular order, this should not be understood as requiring that such operations be performed in the particular order shown or in sequential order, or that all illustrated operations be performed, to achieve desirable results. In certain circumstances, multitasking and parallel processing may be advantageous. Moreover, the separation of various system components in the implementations described herein and the attachments hereto should not be understood as requiring such separation in all implementations, and it should be understood that the described program components and systems can generally be integrated together in a single software product or packaged into multiple software products.

Thus, although particular implementations have been described, other implementations are within the scope of the claims.

What is claimed is:

1. A machine-implemented method of controlling presentation of video content on a display device, the method comprising:

receiving, in a server system, one or more signals from a personal computing device, the one or more signals specifying a video file to be acted upon and identifying a media player for playing the video content, the one or more signals further including a command for controlling the presentation of the video content on the display device,

converting, by the server system, the command into corresponding programming code used by the display device to control the media player; and

storing, in a database associated with the server system, a message for transmission to or retrieval by the display device, wherein the message specifies the video file to be acted upon, identifies the media player for playing the video content, and includes the corresponding programming code used by the display device to control the media player in accordance with the command.

2. The method of claim 1 including:

checking, in the server system, the identity of the media player identified in the one or more signals from the personal computing device;

loading an appropriate set of protocols or application programming interfaces from a library based on the identity of the media player; and

converting the command from the personal computing device into a corresponding JavaScript code used by the display device to control the media player.

3. The method of claim 1 wherein converting the command into corresponding programming code used by the display device to control the media player includes using information in a look-up table.

4. The method of claim 3 wherein the command contained in the one or more signals from the personal computing device is in the form of a universal command, and wherein the look-up table stores a plurality of specific commands, each of which represents, respectively, a corresponding command for a particular media player.

5. The method of claim 1 wherein the command contained in the one or more signals from the personal computing device is in the form of a universal command, and wherein converting the command includes selecting from among a plurality of specific commands, each of which represents, respectively, a corresponding command for a particular media player.

6. The method of claim 1 wherein the universal command represents an instruction to play the video content, to stop playing the video content or to pause playing the video content.

7. The method of claim 1 wherein the video content is an interactive video game.

8. The method of claim 1 wherein the video content is streaming media.

9. The method of claim 1 including:

receiving, in the server system, a code from the personal computing device, wherein the code is uniquely associated with the display device on which the video content is to be played; and

storing in the server system a record establishing a connection between the personal computing device and the display device based on the code.

10. The method of claim 9 wherein the code is different from an IP address associated with the display device and is different from a MAC address associated with the display device.

11. The method of claim 9 including assigning a randomly generated code to the display device each time the display device connects to the server system.

12. A system for controlling playing of video content on a display device, the system comprising:

a server system;

a first database storing a relationship between a personal computing device and the display device; and

a second database;

wherein the server system is operable to receive one or more signals from a personal computing device, the one or more signals specifying a video file to be acted upon and identifying a media player for playing the video content, the one or more signals further including a command for controlling the presentation of the video content on the display device,

the server system being operable to convert the command into corresponding programming code used by the display device to control the media player;

the server system being further operable to store in the second database a message for transmission to or retrieval by the display device, wherein the message specifies the video file to be acted upon, identifies the media player for playing the video content, and includes the corresponding programming code used by the display device to control the media player in accordance with the command.

13. The system of claim 12 including:

a library storing protocols or application programming interfaces,

wherein the server system is operable to check the identity of the media player identified in the one or more signals from the personal computing device, load an appropriate set of protocols or application programming interfaces from the library based on the identity of the media player, and convert the command from the personal computing device into a corresponding programming code used by the display device to control the media player.

14. The system of claim 12 including:

a look-up table storing a plurality of commands each of which is for a particular type of media player,

wherein the server system is operable to convert the command into corresponding programming code used by the display device to control the media player based on information in the look-up table.

15. The system of claim 12 wherein the command contained in the one or more signals from the personal computing device is a universal command, and wherein the look-up table stores a correspondence between the universal command and a plurality of specific commands, each of which is for a particular media player.

16. The system of claim 15 the server system is operable to convert the universal command by selecting from among the plurality of specific commands stored in the look-up table.

17. The system of claim 12 wherein the universal command represents an instruction to play the video content, to stop playing the video content or to pause playing the video content.

18. The system of claim 12 wherein the video content is an interactive video game.

19. The system of claim 12 wherein the video content is streaming media.

20. The system of claim 12 wherein the server system is operable to receive a code from the personal computing device, wherein the code is uniquely associated with the display device on which the video content is to be played, the server system further being operable to store the record establishing a connection between the personal computing device and the display device based on the code.

21. The system of claim 20 wherein the code is different from an IP address associated with the display device and is different from a MAC address associated with the display device.

22. The system of claim 20 wherein the server system is operable to assign a randomly generated code to the display device each time the display device connects to the server system.

23. An automated machine-implemented method of presenting video content on a display device, the method comprising:

retrieving, by the display device, first information that specifies a first video file to be acted upon, that identifies a first media player for playing the first video file, and that indicates corresponding programming code used by the display device to control the first media player in accordance with a first command;

obtaining, by the display device, over the Internet the first media player for playing the first video file;

loading the first media player in the display device;

executing the first command with respect to the first video file using the first media player;

subsequently retrieving, by the display device, second information that specifies a second video file to be acted upon, that identifies a second media player for playing the second video file, and that indicates corresponding programming code used by the display device to control the second media player in accordance with a second command;

obtaining, by the display device, over the Internet the second media player for playing the second video file;

loading the second media player in the display device; and

executing the second command with respect to the second video file using the second media player.

24. The method of claim 23 wherein the display device comprises a television set with a display screen.

25. The method of claim 23 wherein the display device comprises a laptop or personal computer.

26. The method of claim 23 wherein each of the first and second commands represents an instruction to play the respective video file, to stop playing the respective video file or to pause playing the respective video file.

27. The method of claim 23 wherein the display device checks whether the respective media player needed to play the particular video file already is loaded in the display device before obtaining a copy of the media player over the Internet.

ABSTRACT OF THE DISCLOSURE

A system for presenting and controlling content on a display device includes a network, a server system coupled to the network and comprising one or more servers, a display device coupled to the network and having a display, and a personal computing device operable to transmit a first message according to a specified format over the network to the server system. The server system stores an association between the personal computing device and the display device. The first message identifies user-selected content and a media player to play the content. The server system is operable, in response to receiving the first message from the personal computing device, to provide to the display device a second message identifying the user-selected content and the media player to play the content. In response to receiving the second message, the display device is operable to obtain a first media player needed to play the content, to load the media player and to present the content on the display.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111
If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371
If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office
If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Mail Stop Amendment
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

AMENDMENT IN REPLY TO ACTION OF DECEMBER 8, 2011

Please amend the above-identified application as follows:

REMARKS

Claims 1-27 are presented for further examination.

Request that the Office consider all reference submitted in the IDS of 9/26/11

Applicant submitted an Information Disclosure Statement (IDS) together with the application on September 26, 2011. The Office action "lined through" items 12-15 and 17-28 on the form 1449 that accompanied the IDS, indicating that the Examiner might not have considered these items. The Office, however, failed to provide any explanation for not considering all the listed items.

As indicated in the IDS, copies of the foregoing items, as well as English-language abstracts for items 12-15, were provided in the parent application (serial no. 13/157,821) in an IDS submitted on June 10, 2011. Therefore, the Office should have considered each and every item listed on the form 1449 in the IDS for the present application. *See* 37 C.F.R. §§1.97-1.98. Applicant requests that the Office acknowledge its consideration of all references in the next communication.

Rejections under 35 U.S.C. §§102-103

The Office rejected the claims over the following references:

(1) Claims 1-10, 12-21 and 23-26 were rejected as anticipated by U.S. Patent Publication No. 2011/0060998 (Schwartz).[1]

(2) Claims 11 and 22 were rejected as obvious from Schwartz in view of the information from the web site www.vbulletin.com.

(3) Claim 27 was rejected as obvious from Schwartz.

[1] Although page 2, par. 3 of the Office action seems to indicate that claim 11 also is rejected as anticipated by Schwartz, the remainder of the action indicates that claim 11 is rejected only under section 103 as obvious.

Reconsideration is requested.

Claims 1-12

Independent claim 1 recites a machine-implemented method of controlling presentation of video content on a display device. The method includes receiving, in a server system, one or more signals from a remote personal computing device. The one or more signals (i) specify a video file to be acted upon, (ii) identify a media player[2] for playing the video content, and (iii) include a universal playback command for controlling playing of the video content on the display device by the media player. The claim is amended to clarify that the command is a playback control command. Support for this feature can be found, for example, in the Specification at page 6, lines 13-17, page 8, lines 18-21, page 9, lines 17-18 and 28-31. In some implementations, as explained in the Specification (page 9, line 28 – page 10, line 1):

> [T]he user of the mobile phone 20 can control the playing of the video by entering appropriate commands (e.g., pause, fast forward, rewind, stop, play, etc.) through the mobile phone. Each command is incorporated into a message including a transmission code (FIG. 3) as described above. The message is transmitted to the server system 24, . . .

The method further includes converting, by the server system, the universal playback control command into corresponding programming code to control playing of the video content on the display device by the media player. As recited in claim 1, converting the universal playback control command includes selecting from among a plurality of specific commands, each of which represents a corresponding playback control command for a respective media player. As

[2] In the context of the present application, it is clear that a "media player" refers to application software for playing back the video content. Thus, the claims and specification refer in some cases, for example, to "loading" or "unloading" a media player (*see, e.g.*, Specification at page 4, line 22, page 9, lines 18-27). A particular display device, therefore, may, in some cases, be able to load or store any one of different media players.

explained in the Specification (page 8, line 18 – page 9, line 6) according to example implementations:

> Various types of video players may use different JavaScript commands to control their respective playback. Therefore, in the illustrated implementation, a universal adapter 26 is provided to interpret and convert a standard or universal command (e.g., play, pause, etc.) into the specific command recognized by the media player. Each time a signal is received from the mobile device 20, the API adapter 26 checks and identifies the specific media player that is being requested. Based on this information, the system loads the appropriate set of protocols or application programming interfaces (APIs) from its library and converts the incoming commands from the mobile device 20 into the correct JavaScript (or other programming) code used by the target device 22 to control the specific player (block 120). The server system 24 then copies the converted version of the message to the database 34 associated with the target device 22, as indicated above in connection with block 122.
>
> [ ] Thus, for a universal command "New Video," the universal adapter 26 provides the corresponding command for each of several specific media players (e.g., "yt_loadVideo" for YouTube). Similarly, for a universal command "Pause," the universal adapter 26 provides the corresponding command for each of several specific media players (e.g., "pauseVideo" for Ted.com). Other universal commands and the corresponding command(s) for one of more media players also can be stored by the universal adapter 26.

The method of claim 1 also includes storing, in a database associated with the server system, a message for transmission to or retrieval by the display device. The message specifies the video file to be acted upon, identifies the media player for playing the video content, and includes the corresponding programming code to control playing of the video content on the display device by the media player in accordance with the playback control command.

The method may be used to facilitate, for example, a user's creating a playlist based on videos from multiple sources and playing back any of the videos, where the server system acts as a single interface that can be used to control the different media players (*i.e.*, the computer software applications) that may be needed to play the various video files.

Schwartz discloses a system and method for managing Internet media content. As illustrated in FIG. 2 (reproduced below), the system can include a computing device (e.g., a mobile phone) that executes an application 10 (i.e., a software program) (see par. [0138]) to facilitate accessing various media content, including video content. The application is connected through a home network 20 to one or more media destinations 21, 22, 23 (e.g., a television), which can serve as target rendering devices to which the media content can be sent.

FIG. 2

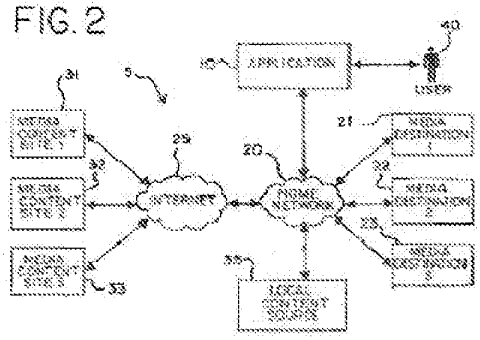

FIG. 3

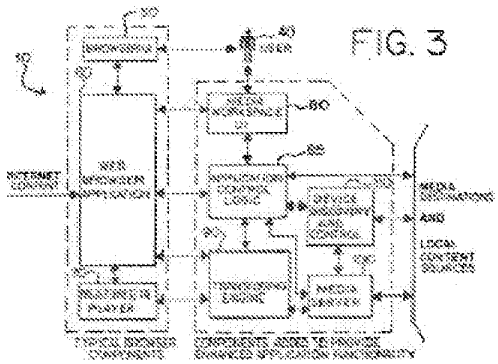

As illustrated in FIG. 3 of Schwartz (reproduced above), the application 10 residing on the computing device (*e.g.*, the mobile phone) includes various components, such as a transcoding engine 90, a media server component 100 and a device discovery and control (DDC) component 110. The transcoding engine 90 can be used to reformat media content to prepare it for delivery to the specified target media destination (pars. [0114], [0124]). Thus, for example, in response to user input directing transfer of media content to a particular target rendering device, the DDC component 110 communicates with the transcoding engine and/or the media server component 100 to obtain the media content in a form that matches the media capabilities of the target rendering device ([par.0122]). Likewise, in response to user input directing a target rendering device to render media content, the DDC component 110 communicates with the target rendering device to instruct it to request, retrieve, process and/or render the media content (par. [0118]). In addition, Schwartz discloses that the media server component 100 of the application

10 can receive messages from the target rendering device, which may request the transcoded or reformatted media content (par. [0137]).

The Office alleges that such messages sent by the target rendering device to the media server component 100 of the Schwartz's software application 10 correspond to the "one or more signals" in claim 1. As explained below, that is incorrect.

First, applicant points out that claim 1 recites that the one or more signals are received *in a server system from a remote personal computing device*, and that the message stored in the database associated with the server system is for transmission to or retrieval *by a display device*. Thus, the server system acts an interface for facilitating the transfer of information contained in the one or more signals (received from the personal computing device) to the display device. The claimed method is significantly different from the method of operation disclosed by Schwartz in which the application 10 residing on the computing device communicates directly through the home network 20 with the target rendering device (e.g., media destination 21). In view of the fact that in Schwartz's system the application 10 residing on the computing device communicates directly through the home network 20 with the target rendering device, there is no need to perform the particular operations recited in the method of claim 1 and indeed, as explained below, Schwartz does not disclose the claimed method.

The Office alleges that the media component 100 of the application 10 corresponds to the claimed "server system" and the target rendering device corresponds to the claimed "personal computing device." However, the messages sent by the target rendering device (*e.g.*, media destination 21) to the media server component 100 of the software application 10 do not correspond to the "one or more signals" in claim 1. In particular, Schwartz explains that the media server component 100 can receive request messages from the target rendering device (par. [0137]) (emphasis added):

> *The media server component 100 may receive request messages from the target rendering device which may request the transcoded, reformatted and/or repurposed internet media content. The request messages from the*

> *target rendering device may request specific portions of the transcoded, reformatted and/or repurposed internet media content.* The media server component 100 may receive instructions from the transcoding engine 90 and/or from other components of the application 10. The instructions may direct the media server component 100 to transmit the transcoded, reformatted and/or repurposed internet media content. The instructions may direct the media server component 100 to transmit the specific portions of the transcoded, reformatted and/or repurposed internet media content. In response to the request messages and/or the instructions, the media server component 100 may transmit the transcoded, reformatted and/or repurposed internet media content and/or the specific portions to the target rendering device.

There is nothing in Schwartz to indicate that the messages sent *from* the target rendering device *to* the media server component 100 include a "playback control command" for controlling playing of the video content on the display device.

Furthermore, although Schwartz elsewhere discloses user-initiated playback controls such as "play," "pause," etc., any such playback controls are sent from the DDC component 110 of the application 10 residing on the computing device to the target rendering device (par. [0119]; *see also* par. [0214] and FIG. 6). Such playback controls are *not* sent from the target rendering device (which allegedly corresponds to the claimed "personal computing device") to the media server component 100 or any component of the application 10 (which allegedly corresponds to the claimed "server system").[3] Therefore, the media component 100 of the application 10 also does not "convert" any playback control commands that were received "from" the target rendering device. Furthermore, there is nothing in Schwartz that discloses or suggests that converting a universal playback control command includes "selecting from among a plurality of specific commands, each of which represents a corresponding playback control command for a respective media player," as recited in claim 1.

---

[3] Receipt *by the application 10* of playback controls also does not satisfy the claim language of "receiving, in a server system, one or more signals from a remote personal computing device. . ." For one thing, the application 10 and the computing device executing the application are not a "server system." Furthermore, the user-initiated playback controls are not received in the application 10 "from a *remote* personal computing device." Instead, the application 10 is being executed by the computing device on which is resides.

Applicant acknowledges that, as discussed above, the application 10 includes a transcoding engine 90 that "may reformat and/or repurpose *the media content*" for compatibility with the media destination(s) (par. [0114]). As explained by Schwartz:

> The transcoding engine 90 may process the internet *media content* and/or the locally stored *media content* to prepare the media content for delivery to the specified media destination. The transcoding engine 90 may transcode the internet *media content* and/or the locally stored *media content* based on the media capabilities of the specified media destination. For example, the transcoding engine 90 may transcode the *media content* to produce transcoded media content which may conform to media codecs, profiles and/or levels which may be supported by the specified media destination. The transcoding engine 90 may reformat the *media content*. For example, the transcoding engine 90 may reformat the *media content* to produce reformatted media content which may have a file format and/or a delivery format appropriate for the specified media destination.

Here too, however, there is nothing to indicate that the transcoding engine "converts" playback control commands. Instead, any reformatting or repurposing it might perform is with respect to the media content itself, not with respect to a playback control command.

In view of the foregoing remarks, it is clear that Schwartz fails to disclose (1) receiving, in a server system, one or more signals from a remote personal computing device, . . . the one or more signals further including a universal playback control command for controlling playing of the video content on the display device by the media player, and (2) converting, by the server system, the playback control command into corresponding programming code to control playing of the video content on the display device by the media player, wherein converting the universal playback control command includes selecting from among a plurality of specific commands, each of which represents a corresponding playback control command for a respective media player.

The information from the web site www.vbulletin.com also fails to disclose or render obvious the claim limitations missing from Schwartz. Therefore, neither Schwartz nor the information from the web site www.vbulletin.com, taken alone or in combination, discloses or renders obvious the subject matter of claim 1 or its dependent claims.

At least for these reasons, the rejections of claim 1 and its dependent claims should be withdrawn.

Furthermore, the dependent claims recite additional language that renders those claims independently patentable.

Claims 12-22

Independent claim 12 recites a system for controlling playing of video content on a display device. The system includes a server system operable to receive one or more signals from a remote personal computing device. The one or more signals specify a video file to be acted upon, identify a media player for playing the video content, and include a universal playback control command for controlling the playing of the video content on the display device by the media player. The server system also is operable to convert the universal playback control command into corresponding programming code to control playing of the video content on the display device by the media player.

The rejections of claim 12 as well as its dependent claims under sections 102-103 should be withdrawn at least for the same reasons as discussed above with respect to claim 1.

Claims 23-27

Independent claim 23 recites an automated machine-implemented method of presenting video content on a display device. The method includes the display device retrieving[4] from a server system first information (i) that specifies a first video file to be acted upon, (ii) that

[4] For example, in some implementations, the display device can retrieve the information by periodically checking entries in a database or polling the database to determine where there are any new messages directed to it (page 9, lines 7-10).

identifies a first media player for playing the first video file, and (iii) that indicates corresponding programming code to control playing of the first video file on the display device by the first media player in accordance with a first playback control command. The display device obtains over the Internet the first media player for playing the first video file, loads the first media player in the display device, and executes the first playback control command with respect to the first video file using the first media player. The display device also performs the foregoing operations with respect to a second video file, a second media player, and a second playback control command.

In contrast, none of the components in Schwartz's system performs the recited operations. For example, the application 10 executing on the computing device can "retrieve" specified media content from an appropriate media content site (pars. [0102], [0122]). Likewise, the DDC component 110 of the application 10 may instruct the target rendering device to "retrieve" media content and may specify an appropriate location from which the media content is to be retrieved by the target rendering device (par. [0118]).

However, neither the application 10 nor the target rendering device "retrieves," from a server system, information (i) that specifies a first video file to be acted upon, (ii) that identifies a first media player for playing the first video file and (iii) that indicates corresponding programming code used to control playing of a video file by the first media player in accordance with a first playback control command. Although the DDC component 110 of the application 10 transmits playback control instructions to the target rendering device (par. [0119]), neither the DDC component 110 not any other component in the application 10 "retrieves" such instructions form a server system, as recited in claim 23. Likewise, although the target rendering device can receive the playback control instructions from the DDC component 110, the target rendering device does not "retrieve" such information, as recited in claim 23.

Therefore, neither Schwartz nor the information from the web site www.vbulletin.com, taken alone or in combination, discloses or renders obvious the subject matter of claim 23 or its dependent claims.

At least for these reasons, the rejections of claim 23 and its dependent claims should be withdrawn.

Furthermore, the dependent claims recite additional language that renders those claims independently patentable.

Rejections under 35 U.S.C. §101

The Office rejected claims 12-21 as directed to non-statutory subject matter because the claimed system "does not exclude a system composed entirely of software."

Applicant respectfully disagrees.

First, claim 12 is directed to a "system" that includes a server system "operable to receive one or more signals . . ." Therefore, the claimed system is not an "abstract idea" that is ineligible for patent protection under the Supreme Court's 2010 decision in *Bilski*. Furthermore, in view of the fact that the claimed system is "operable to receive one or more signals . . .," it is clear that the claimed system does not encompass a system "entirely composed of software" as alleged by the Office.

Also, claim 12 is amended to recite "one or more computer-readable media storing instructions that when executed by the server system, cause the server system to perform operations . . ." Support for this amendment can be found, for example, in the Specification at page 14, lines 7-24). As explained by the MPEP (§2106.01.I):

> [A] claimed computer-readable medium encoded with a computer program is a computer element which defines structural and functional interrelationships between the computer program and the rest of the computer which permit the computer program's functionality to be realized, and is thus statutory.
>
> * * *

> Only when the claimed invention taken as a whole is directed to a mere program listing, i.e., to only its description or expression, is it descriptive material *per se* and hence nonstatutory.

Therefore, the system of claim 12, which includes one or more computer-readable media, clearly satisfies the requirements of section 101. Accordingly, the rejections of claim 12 and its dependent claims under section 101 should be withdrawn.

Conclusion

It is believed that all of the pending claims have been addressed. However, the absence of a reply to a specific rejection, issue or comment does not signify agreement with or concession of that rejection, issue or comment. In addition, because the arguments made above may not be exhaustive, there may be reasons for patentability of any or all pending claims (or other claims) that have not been expressed. Finally, nothing in this paper should be construed as an intent to concede any issue with regard to any claim, except as specifically stated in this paper, and the amendment of any claim does not necessarily signify concession of unpatentability of the claim prior to its amendment.

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1. (Currently amended) A machine-implemented method of controlling presentation of video content on a display device by a media player, the method comprising:

receiving, in a server system, one or more signals from a remote personal computing device, the one or more signals specifying a video file to be acted upon and identifying a media player for playing the video content, the one or more signals further including a universal playback control command for controlling ~~the presentation~~ playing of the video content on the display device by the media player,

converting, by the server system, the universal playback control command into corresponding programming code ~~used by the display device~~ to control playing of the video content on the display device by the media player, wherein converting the universal playback control command includes selecting from among a plurality of specific commands, each of which represents a corresponding playback control command for a respective media player; and

storing, in a database associated with the server system, a message for transmission to or retrieval by the display device, wherein the message specifies the video file to be acted upon, identifies the media player for playing the video content, and includes the corresponding programming code ~~used by the display device~~ to control playing of the video content on the display device by the media player in accordance with the universal playback control command.

2. (Currently amended) The method of claim 1 including:

checking, in the server system, the identity of the media player identified in the one or more signals from the personal computing device;

loading an appropriate set of protocols or application programming interfaces from a library based on the identity of the media player; and

converting the command from the personal computing device into a corresponding JavaScript code ~~used by the display device~~ to control the media player.

3. (Currently amended) The method of claim 1 wherein converting the command into corresponding programming code ~~used by the display device~~ to control the media player includes using information in a look-up table.

4. (Currently amended) The method of claim 3 ~~wherein the command contained in the one or more signals from the personal computing device is in the form of a universal command, and~~ wherein the look-up table stores a plurality of specific commands, each of which represents, respectively, a corresponding command for a ~~particular~~ different media player.

5. (Canceled)

6. (Original) The method of claim 1 wherein the universal command represents an instruction to play the video content, to stop playing the video content or to pause playing the video content.

7. (Original) The method of claim 1 wherein the video content is an interactive video game.

8. (Original) The method of claim 1 wherein the video content is streaming media.

9. (Original) The method of claim 1 including:

receiving, in the server system, a code from the personal computing device, wherein the code is uniquely associated with the display device on which the video content is to be played; and

storing in the server system a record establishing a connection between the personal computing device and the display device based on the code.

10. (Original) The method of claim 9 wherein the code is different from an IP address associated with the display device and is different from a MAC address associated with the display device.

11. (Original) The method of claim 9 including assigning a randomly generated code to the display device each time the display device connects to the server system.

12. (Currently amended) A system for controlling playing of video content on a display device by a media player, the system comprising:

a server system;

a first database storing a relationship between a personal computing device and the display device; and

a second database;

wherein the server system is operable to receive one or more signals from a remote personal computing device, the one or more signals specifying a video file to be acted upon and identifying a media player for playing the video content, the one or more signals further including a universal playback control command for controlling ~~the presentation~~ playing of the video content on the display device,

one or more computer-readable media storing instructions that when executed by the server system, cause the server system ~~being operable~~ to perform operations including converting the universal playback control command into corresponding programming code ~~used by the display device~~ to control playing of the video content by the media player, wherein converting the universal playback control command includes selecting from among a plurality of specific commands, each of which represents a corresponding playback control command for a respective media player;

the server system being further operable to store in the second database a message for transmission to or retrieval by the display device, wherein the message specifies the video file to be acted upon, identifies the media player for playing the video content, and includes the corresponding programming code ~~used by the display device~~ to control playing of the video content on the display device by the media player in accordance with the universal playback control command.

13. (Currently amended) The system of claim 12 including:

a library storing protocols or application programming interfaces,

wherein the server system is operable to check the identity of the media player identified in the one or more signals from the personal computing device, load an appropriate set of protocols or application programming interfaces from the library based on the identity of the media player, and convert the command from the personal computing device into a corresponding programming code ~~used by the display device~~ to control the media player.

14. (Currently amended) The system of claim 12 including:

a look-up table storing a plurality of commands each of which is for a particular type of media player,

wherein the server system is operable to convert the command into corresponding programming code ~~used by the display device~~ to control the media player based on information in the look-up table.

15. (Currently amended) The system of claim 12 ~~wherein the command contained in the one or more signals from the personal computing device is a universal command, and~~ wherein the look-up table stores a correspondence between the universal command and a plurality of specific commands, each of which is for a ~~particular~~ different media player.

16. (Original) The system of claim 15 the server system is operable to convert the universal command by selecting from among the plurality of specific commands stored in the look-up table.

17. (Original) The system of claim 12 wherein the universal command represents an instruction to play the video content, to stop playing the video content or to pause playing the video content.

18. (Original) The system of claim 12 wherein the video content is an interactive video game.

19. (Original) The system of claim 12 wherein the video content is streaming media.

20. (Original) The system of claim 12 wherein the server system is operable to receive a code from the personal computing device, wherein the code is uniquely associated with the display device on which the video content is to be played, the server system further being operable to store the record establishing a connection between the personal computing device and the display device based on the code.

21. (Original) The system of claim 20 wherein the code is different from an IP address associated with the display device and is different from a MAC address associated with the display device.

22. (Original) The system of claim 20 wherein the server system is operable to assign a randomly generated code to the display device each time the display device connects to the server system.

23. (Currently amended) An automated machine-implemented method of presenting video content on a display device by a media player, the method comprising:

retrieving, by the display device from a server system, first information that specifies a first video file to be acted upon, that identifies a first media player for playing the first video file, and that indicates corresponding programming code ~~used by the display device~~ to control playing of the first video file on the display device by the first media player in accordance with a first playback control command;

obtaining, by the display device, over the Internet the first media player for playing the first video file;

loading the first media player in the display device;

executing the first playback control command with respect to the first video file using the first media player;

subsequently retrieving, by the display device from the server system, second information that specifies a second video file to be acted upon, that identifies a second media player different from the first media player for playing the second video file, and that indicates corresponding programming code ~~used by the display device~~ to control playing of the second video file on the display device by the second media player in accordance with a second playback control command;

obtaining, by the display device, over the Internet the second media player for playing the second video file;

loading the second media player in the display device; and

executing the second playback control command with respect to the second video file using the second media player.

24. (Original) The method of claim 23 wherein the display device comprises a television set with a display screen.

25. (Original) The method of claim 23 wherein the display device comprises a laptop or personal computer.

26. (Original) The method of claim 23 wherein each of the first and second commands represents an instruction to play the respective video file, to stop playing the respective video file or to pause playing the respective video file.

27. (Original) The method of claim 23 wherein the display device checks whether the respective media player needed to play the particular video file already is loaded in the display device before obtaining a copy of the media player over the Internet.

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE *3* MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1)☒ Responsive to communication(s) filed on *22 February 2012*.

2a)☒ This action is **FINAL**. 2b)☐ This action is non-final.

3)☐ An election was made by the applicant in response to a restriction requirement set forth during the interview on _____; the restriction requirement and election have been incorporated into this action.

4)☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

5)☒ Claim(s) *1-4 and 6-27* is/are pending in the application.

5a) Of the above claim(s) _____ is/are withdrawn from consideration.

6)☐ Claim(s) _____ is/are allowed.

7)☒ Claim(s) *1-4, 6-27* is/are rejected.

8)☐ Claim(s) _____ is/are objected to.

9)☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

10)☐ The specification is objected to by the Examiner.

11)☐ The drawing(s) filed on _____ is/are: a)☐ accepted or b)☐ objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

12)☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

13)☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

a)☐ All b)☐ Some * c)☐ None of:

1.☐ Certified copies of the priority documents have been received.

2.☐ Certified copies of the priority documents have been received in Application No. _____.

3.☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

This action is in response to the amendment filed 22 February 2012. Claims 1-4, 12-14, 23 have been amended. Claim 5 has been canceled. Claims 1-4, 6-27 are pending and have been considered below.

Response to Arguments

1. Applicant's arguments filed 22 February 2012 have been fully considered but they are not persuasive.

The applicant argues “Thus, the server system acts an interface for facilitating the transfer of information contained in the one or more signals (received from the personal computing device) to the display device. … In view of the fact that in Schwartz's system the application 10 residing on the computing device communicates directly through the home network 20 with the target rendering device, there is no need to perform the particular operations recited in the method of claim 1 and indeed, as explained below, Schwartz does not disclose the claimed method. ... There is nothing in Schwartz to indicate that the messages sent/from the target rendering device to the media server component 100 include a "playback control command" for controlling playing of the video content on the display device.” The examiner respectfully disagrees. Schwartz discloses “The media server component 100 may indicate the availability of the media content and/or may provide access to the media content to the rendering devices, portable media

players, other media destinations, control points and/or multimedia clients which may be accessible to the application 10 using the network 20 and/or other means. … For example, the media server component 100 may indicate the availability of the media content and/or may provide the access to the media content regardless of whether the application 10 is being actively used and/or controlled by the user 40 using the browser user interface 50 and/or the media workspace user interface 80. Thus, the user 40 may discover, may select and/or may access the media content, such as, for example, the internet media content, directly from the media destinations, the control points and/or other applications in the network 20." (paragraph 0130), "The user 40 may access the media server component 100 of the application 10 using a user interface provided by the UPnP AV compliant television." (paragraph 0136). As can be seen, the user can access the media server component directly from the media destination/rendering device using a user interface whether or not any user is actively using or controlling the media server component. Furthermore, Schwartz, discloses "The DDC component 110 may communicate with the target rendering device to control the rendering of the one or more media content objects. For example, the DDC component 110 may control the rendering of the one or more media content objects by the target rendering device in

accordance with playback controls which may be presented by the application 10 in the media workspace user interface 80 and/or which may be accessed, invoked and/or used by the user 40." (paragraph 0119), "The user 40 may access the media server component 100 of the application 10 using a user interface provided by the UPnP AV compliant television. The availability of the bookmarked internet media content may be indicated to the user 40 by the media server component 100, and/or the user 40 may select a specific bookmark to view the associated media content on the UPnP AV compliant television. In response to selection of the specific bookmark, the UPnP AV compliant television may request the associated media content from the media server component 100 of the application 10. The application 10 may request the associated media content from a media content site that provides the media content associated with the specific bookmark. The application 10 may receive the media content associated with the specific bookmark from the media content site. The transcoding engine 90 may transcode, may reformat and/or may repurpose the media content for compatibility with the UPnP AV compliant television. The application 10 may begin transmitting the transcoded, reformatted and/or repurposed media content to the UPnP AV compliant television for rendering as the transcoding engine 90 transcodes, reformats and/or repurposes the media

content." (paragraph 0136). It can be seen that from the media destination/rendering device, the user can request, through the media server, media content via a bookmark. After the media content is selected, the media server determines the capabilities of the media destination/rendering device and sends playback commands depending on the rendering capabilities of the media destination/rendering device. Since any media destination/rendering device, which can have different rendering capabilities from other media destinations/rendering devices, can request media content and the rendering/playback commands will be determined according to the rendering capabilities of the media destination/rendering device, the request for the media content via a bookmark acts as a universal playback control. In addition, the applicant seems to be arguing that the remote personal computing device and the display device are different; however, there is nothing in the claims that requires that the display device and the remote personal computing device be separate. In fact, the limitation, "a message for transmission to or retrieval by the display device," seems to indicate that the remote personal computing device and the display device are connected to each other. Therefore, the media destination/rendering device, which can include a display device, reads on both the personal computing device and the display device.

The applicant argues "Such playback controls are not sent from the target rendering device (which allegedly corresponds to the claimed 'personal computing device') to the media server component 100 or any component of the application 10 (which allegedly corresponds to the claimed "server system").[3] Therefore, the media component 100 of

the application 10 also does not 'convert' any playback control commands that were received 'from' the target rendering device. Furthermore, there is nothing in Schwartz that discloses or suggests that converting a universal playback control command includes 'selecting from among a plurality of specific commands, each of which represents a corresponding playback control command for a respective media player,' as recited in claim 1." The examiner respectfully disagrees. As argued above, any media destination/rendering device can request media content via a bookmark and the server will send back rendering/playback commands depending on the capabilities of the media destination/rendering device. Clearly, the request for the media content from the media destination/rendering device is intended for "playing" the media content if the media destination/rendering device is capable of "playing" the media content. However, the request for the media content via a book mark does not specify the specific rendering/playback commands, these commands are determined by the server. Therefore, the request by the media destination/rendering device of media content via a bookmark initiates the process in the server of determining the appropriate rendering/playback commands. Furthermore, Schwartz discloses "The DDC component 110 may create, may maintain and/or may update an internal list of the available rendering devices in the network 20. The internal list may have the media capabilities of the available rendering devices. The media capabilities of the available rendering devices may have and/or may be, for example, media types, such as, for example, audio, video and/or image;

multimedia codecs, such as, for example, AAC Audio codec, H.264 video codec and/or the like; profiles and/or levels associated with the multimedia codecs; transport methods; and/or digital rights management ("DRM") technologies which may be supported by the available rendering devices. The present invention is not limited to a specific embodiment of the media capabilities which may be determined by the DDC component 110." (paragraph 0117). That is, Schwartz uses a list to map retrieved media content to a media destination/rendering device and its rendering capabilities and then send the appropriate rendering/playback commands; in other words, the list is used to map a request for media content via a bookmark to the appropriate rendering/playback commands of a media destination/rendering device.

The applicant argues "However, neither the application 10 nor the target rendering device 'retrieves,' from a server system, information (i) that specifies a first video file to be acted upon, (ii) that identifies a first media player for playing the first video file and (iii) that indicates corresponding programming code used to control playing of a video file by the first media player in accordance with a first playback control command." The examiner respectfully disagrees. As shown above, Schwartz discloses a list of available rendering devices and the media capabilities of the available rendering devices, which include media types, such as, audio, video and/or image; multimedia codecs; profiles and/or levels associated with the multimedia codecs and transport methods. When the

media destination/rendering device requests media content, the server application retrieves the specified media content as can be seen in Schwartz"As shown in FIG. 2, the application 10 may access a local content source 35 via the network 20. Although not shown in the figure, local content sources not connected to the network 20 may be accessible to the application 10. For example, the application 10 may be a computer application running on a personal computer which has local content stored on a local hard drive, or which has access to local content stored on a device attached to the personal computer by a local connection, such as, for example, a USB cable." (paragraph 0098) "The application 10 may enable the user 40 to control rendering of each of the media content objects during rendering by the rendering device. The application 10 may initiate rendering of a new media content object from the playlist after completion of rendering of the previous media content object. Further, the application 10 may initiate rendering of a new media content object from the playlist after receiving user input requesting that the rendering skip forward to the next media content object, skip backward to a previous media content object, jump to a selected media content object in the playlist, and/or the like." (paragraph 0106). It is clear in Schwartz that

the server application retrieves media objects from a playlist, the media player and capabilities from the capabilities list.

Schwartz (paragraph 0172 [As another example, the user 40 may have established a user preference to identify Windows Media Audio content only if the Windows Media Audio content is encoded in stereo at a bitrate exceeding seventy-five kbit/s.])

Claim Rejections - 35 USC § 101

2. 35 U.S.C. 101 reads as follows:

> Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 12-21 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 12-21 are drawn to a system. The claimed system does not exclude a system composed entirely of software. A media player, a server system and a database could consist of software per se, i.e. it is common is the art for a media player, a server system and a database to be implemented as a software only product, e.g. Microsoft ® Media Player, Microsoft ® Windows Server ® and Microsoft ® SQL Server. Nothing in the claim or the specification requires that the media player, server system or the database be tied to a hardware component. Software per se is none of a process, machine, manufacture or composition of matter, and, therefore is not a statutory category of invention. With respect to the added computer-readable media storing instructions, it is the view of the

Office that instructions can be stored in a transmission signal or wave; therefore, simply claiming a computer-readable medium does not preclude a transmission signal or wave. A transmission signal or wave is none of a process, machine, manufacture or composition of matter, and, therefore is not a statutory category of invention.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

> A person shall be entitled to a patent unless –
>
> (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-4, 6-10, 12-26 are rejected under 35 U.S.C. 102(e) as being anticiptated by Schwartz et al. (US 2011/00600998 A1).

Claim 1. Schwartz discloses a machine-implemented method of controlling presentation of video content on a display device by a media player (paragraph 0130 [The media server component 100 may indicate the availability of the media content and/or may provide access to the media content to the rendering devices, portable media players, other media destinations, control points and/or multimedia clients which may

be accessible to the application 10 using the network 20 and/or other means.]), the method comprising:

a. receiving, in a server system, one or more signals from a remote personal computing device, the one or more signals specifying a video file to be acted upon and identifying a media player for playing the video content (paragraph 0130 [The media server component 100 may indicate the availability of the media content and/or may provide access to the media content to the rendering devices, portable media players, other media destinations, control points and/or multimedia clients which may be accessible to the application 10 using the network 20 and/or other means. … For example, the media server component 100 may indicate the availability of the media content and/or may provide the access to the media content regardless of whether the application 10 is being actively used and/or controlled by the user 40 using the browser user interface 50 and/or the media workspace user interface 80. Thus, the user 40 may discover, may select and/or may access the media content, such as, for example, the internet media content, directly from the media destinations, the control points and/or other applications in the network 20.], 0136 [The user 40 may access the media server component 100 of the application 10

using a user interface provided by the UPnP AV compliant television.]),

b. the one or more signals further including a universal playback control command for controlling playing of the video content on the display device by the media player (paragraph 0119 [The DDC component 110 may communicate with the target rendering device to control the rendering of the one or more media content objects. For example, the DDC component 110 may control the rendering of the one or more media content objects by the target rendering device in accordance with playback controls which may be presented by the application 10 in the media workspace user interface 80 and/or which may be accessed, invoked and/or used by the user 40.]),

c. converting, by the server system, the universal playback control command into corresponding programming code to control playing of the video content on the display device by the media player (paragraph 0119 [The DDC component 110 may transmit rendering control instructions to the target rendering device.]); wherein,

d. converting the universal playback control command includes selecting from among a plurality of specific commands, each of which represents a corresponding playback control command for a respective media player (paragraph 0116 [The DDC component 110 may consult additional

sources, such as, for example, a capabilities database to determine the capabilities and/or the additional capabilities of the available rendering devices. The capabilities and/or the additional capabilities may indicate the media capabilities for the available rendering devices.], paragraph 0117 [The DDC component 110 may create, may maintain and/or may update an internal list of the available rendering devices in the network 20. The internal list may have the media capabilities of the available rendering devices. The media capabilities of the available rendering devices may have and/or may be, for example, media types, such as, for example, audio, video and/or image; multimedia codecs, such as, for example, AAC Audio codec, H.264 video codec and/or the like; profiles and/or levels associated with the multimedia codecs; transport methods; and/or digital rights management ("DRM") technologies which may be supported by the available rendering devices. The present invention is not limited to a specific embodiment of the media capabilities which may be determined by the DDC component 110.]); and

e. storing, in a database associated with the server system, a message for transmission to or retrieval by the display device (paragraph 0116 [The DDC

component 110 may consult additional sources, such as, for example, a capabilities database to determine the capabilities and/or the additional capabilities of the available rendering devices. The capabilities and/or the additional capabilities may indicate the media capabilities for the available rendering devices.], paragraph 0117 [The DDC component 110 may create, may maintain and/or may update an internal list of the available rendering devices in the network 20. The internal list may have the media capabilities of the available rendering devices. The media capabilities of the available rendering devices may have and/or may be, for example, media types, such as, for example, audio, video and/or image; multimedia codecs, such as, for example, AAC Audio codec, H.264 video codec and/or the like; profiles and/or levels associated with the multimedia codecs; transport methods; and/or digital rights management ("DRM") technologies which may be supported by the available rendering devices. The present invention is not limited to a specific embodiment of the media capabilities which may be determined by the DDC component 110.], paragraph 0122 [In response to user input directing transfer of one or more media content objects to one of the portable media playback devices, the DDC component 110 may

communicate with the transcoding engine 90 and/or the media server component 100 to obtain the one or more media content objects in a form which may match the media capabilities of the portable media playback device. As a result, the one or more media content objects may be requested, may be retrieved, may be transcoded, may be reformatted, and/or may be repurposed for transfer to the portable media playback device. The DDC component 110 may communicate with the portable media playback device to transfer the one or more media content objects to the portable media playback device.]), wherein

f. the message specifies the video file to be acted upon, identifies the media player for playing the video content paragraph 0122 [In response to user input directing transfer of one or more media content objects to one of the portable media playback devices, the DDC component 110 may communicate with the transcoding engine 90 and/or the media server component 100 to obtain the one or more media content objects in a form which may match the media capabilities of the portable media playback device. As a result, the one or more media content objects may be requested, may be retrieved, may be transcoded, may be reformatted, and/or may be repurposed for transfer to the portable media playback device. The DDC component 110 may

communicate with the portable media playback device to transfer the one or more media content objects to the portable media playback device.]), and

g. includes the corresponding programming code to control playing of the video content on the display device by the media player in accordance with the universal playback control command paragraph 0122 [In response to user input directing transfer of one or more media content objects to one of the portable media playback devices, the DDC component 110 may communicate with the transcoding engine 90 and/or the media server component 100 to obtain the one or more media content objects in a form which may match the media capabilities of the portable media playback device. As a result, the one or more media content objects may be requested, may be retrieved, may be transcoded, may be reformatted, and/or may be repurposed for transfer to the portable media playback device. The DDC component 110 may communicate with the portable media playback device to transfer the one or more media content objects to the portable media playback device.]).

There are two embodiments in Schwartz; a first embodiment where the application controls the media destination, and a second embodiment where the media destination

retrieves the media object from a user interface through the application and wherein the media object is transcoded via the transcoding engine. Therefore, the playback commands will be sent from the media destination to the application and the rendering commands will be sent from the application to the media destination.

Claim 2. Schwartz discloses the method of claim 1 and Schwartz further discloses:

a. checking, in the server system, the identity of the media player identified in the one or more signals from the personal computing device paragraph 0156 [The media capabilities of the media library may specify the media which is compatible with the associated media player and/or which is appropriate for use with the associated media management application.]);

b. loading an appropriate set of protocols or application programming interfaces from a library based on the identity of the media player (paragraph 0120 [The DDC component 110 may exchange protocol messages with the portable media playback devices to determine the capabilities of the portable media playback devices and/or other properties of the portable media playback devices.]); and

c. converting the command from the personal computing device into a corresponding JavaScript code to control the media player (paragraph 0141 [The

scripts and/or the active objects may include, for example, JavaScript,]).

Claim 3. Schwartz discloses the method of claim 1 and Schwartz further discloses converting the command into corresponding programming code to control the media player includes using information in a look-up table (paragraph 0116 [The DDC component 110 may consult additional sources, such as, for example, a capabilities database to determine the capabilities and/or the additional capabilities of the available rendering devices.]).

Claim 4. Schwartz discloses the method of claim 3 and Schwartz further discloses the look-up table stores a plurality of specific commands, each of which represents, respectively, a corresponding command for a different media player (paragraph 0116 [The DDC component 110 may consult additional sources, such as, for example, a capabilities database to determine the capabilities and/or the additional capabilities of the available rendering devices.]).

Claim 5. canceled.

Claim 6. Schwartz discloses the method of claim 1 and Schwartz further discloses the universal command represents an instruction to play the video content, to stop playing the video content or to pause playing the video content (paragraph 0119 [The rendering control instructions may correspond to the playback controls, such as, for example, "Play," "Pause," "Stop," "Rewind," "Fast Forward," "Seek to a specific time," "Volume Up," "Volume Down," "Skip to the next media content object," "Skip to the previous media content object", "Jump to a specified media content object," and/or other playback controls known to one having ordinary skill in the art.]).

Claim 7. Schwartz discloses the method of claim 1 and Schwartz further discloses the video content is an interactive video game (paragraph 0100 [The media destinations 21,22,23 may be, for example, available rendering devices to which media content may be sent; ... a portable gaming device]).

Claim 8. Schwartz discloses the method of claim 1 and Schwartz further discloses the video content is streaming media (paragraph 0097 [The media content may be and/or may have image content, audio content, video content and/or the like. … The media content sites may provide the media content to the application 10 using well-known internet delivery

protocols, such as, for example, Hypertext Transfer Protocol ("HTTP"), Real Time Streaming Protocol ("RTSP"),]).

Claim 9. Schwartz discloses the method of claim 1 and Schwartz further discloses: receiving, in the server system, a code from the personal computing device, wherein the code is uniquely associated with the display device on which the video content is to be played (paragraph 0156 [The media capabilities of the media library may specify the media which is compatible with the associated media player and/or which is appropriate for use with the associated media management application.]); and storing in the server system a record establishing a connection between the personal computing device and the display device based on the code (paragraph 0036 [In an embodiment, the method has the step of displaying a visual representation for each of a plurality of rendering devices connected to the network wherein the terminal concurrently displays the first webpage, the first set of symbolic representations and the visual representation for each of the plurality of rendering devices.]).

Claim 10. Schwartz discloses the method of claim 9 and Schwartz further discloses the code is different from an IP address associated with the display device and is different from a MAC address associated with the display device (paragraph 0120 [The DDC

component 110 may exchange protocol messages with the portable media playback devices to determine the capabilities of the portable media playback devices and/or other properties of the portable media playback devices. The other properties may be, for example, a manufacturer name, a model number, a description, a graphic representation, and/or like properties of the portable media playback devices.]).

Claim 12 discloses a system for controlling playing of video content on a display device similar to the machine-implemented method of claim 1 and is rejected with the same rational. Schwartz further discloses a first database storing a relationship between a personal computing device and the display device (paragraph 0116 [devices. The DDC component 110 may consult additional sources, such as, for example, a capabilities database to determine the capabilities and/or the additional capabilities of the available rendering devices.], paragraph 0156 [The media capabilities of the media library may specify the media which is compatible with the associated media player and/or which is appropriate for use with the associated media management application.]). Claims 13, 14, 17, 18, 19, 20, 21 are similarly rejected with the same rational as claims 2, 4, 6, 7, 8, 9, 10.

Claim 15. Schwartz discloses the system of claim 12 and Schwartz further discloses the look-up table stores a correspondence between the universal command and a plurality of specific commands, each of which is for a different media player. (paragraph 0116 [The DDC component 110 may consult additional sources, such as, for example, a capabilities database to determine the capabilities and/or the additional capabilities of the available rendering devices.]).

Claim 16. Schwartz discloses the system of claim 15 and Schwartz further discloses the server system is operable to convert the universal command by selecting from among the plurality of specific commands stored in the look-up table (paragraph 0116 [The DDC component 110 may consult additional sources, such as, for example, a capabilities database to determine the capabilities and/or the additional capabilities of the available rendering devices.], paragraph 0119 [The rendering control instructions may correspond to the playback controls, such as, for example, "Play," "Pause," "Stop," "Rewind," "Fast Forward," "Seek to a specific time," "Volume Up," "Volume Down," "Skip to the next media content object," "Skip to the previous media content object", "Jump to a specified media content object," and/or other playback controls known to one having ordinary skill in the art.], paragraph 0122 [As a result, the one or more media content

objects may be requested, may be retrieved, may be transcoded, may be reformatted, and/or may be repurposed for transfer to the portable media playback device.]).

Claim 23. Schwartz discloses an automated machine-implemented method of presenting video content on a display device by a media player (paragraph 0130 [The media server component 100 may indicate the availability of the media content and/or may provide access to the media content to the rendering devices, portable media players, other media destinations, control points and/or multimedia clients which may be accessible to the application 10 using the network 20 and/or other means.]), the method comprising:

a. retrieving, by the display device from a server system, first information that specifies a first video file to be acted upon, that identifies a first media player for playing the first video file, and that indicates corresponding programming code to control playing of the first video file on the display device by the first media player (paragraph 0130 [The media server component 100 may indicate the availability of the media content and/or may provide access to the media content to the rendering devices, portable media players, other media destinations, control points and/or multimedia clients which may be accessible to the application 10 using the network 20 and/or other means.

… For example, the media server component 100 may indicate the availability of the media content and/or may provide the access to the media content regardless of whether the application 10 is being actively used and/or controlled by the user 40 using the browser user interface 50 and/or the media workspace user interface 80. Thus, the user 40 may discover, may select and/or may access the media content, such as, for example, the internet media content, directly from the media destinations, the control points and/or other applications in the network 20.], 0136 [The user 40 may access the media server component 100 of the application 10 using a user interface provided by the UPnP AV compliant television.])

b. in accordance with a first playback control command (paragraph 0119 [The DDC component 110 may communicate with the target rendering device to control the rendering of the one or more media content objects. For example, the DDC component 110 may control the rendering of the one or more media content objects by the target rendering device in accordance with playback controls which may be presented by the application 10 in the media workspace user interface 80 and/or which may be accessed, invoked and/or used by the user 40.]);

c. obtaining, by the display device, over the Internet the first media player for playing the first video file, loading the first media player in the display device (paragraph 0004 [Some media content types may require the user to obtain and/or install an associated media player application and/or a plug-in program, but typically the associated media player application and/or the plug-in program are also available at no cost to the user. Thus, media content sites provide the user with a convenient means to access internet media content and to use the internet media content within the webpages provided by the websites.]);

d. executing the first playback control command with respect to the first video file using the first media player (paragraph 0119 [The DDC component 110 may transmit rendering control instructions to the target rendering device.]);

e. subsequently retrieving, by the display device from the server system, second information that specifies a second video file to be acted upon, that identifies a second media player different from the first media player for playing the second video file, and that indicates corresponding programming code to control playing of the second video file on the display device by the second media player in accordance with a second command playback control ; obtaining, by the display device, over the Internet the second media player for playing the second video

file; loading the second media player in the display device; and executing the second playback control command with respect to the second video file using the second media player (paragraph 0117 [The media capabilities of the available rendering devices may have and/or may be, for example, media types, such as, for example, audio, video and/or image; multimedia codecs, such as, for example, AAC Audio codec, H.264 video codec and/or the like; profiles and/or levels associated with the multimedia codecs; transport methods; and/or digital rights management ("DRM") technologies which may be supported by the available rendering devices. The present invention is not limited to a specific embodiment of the media capabilities which may be determined by the DDC component 110.], paragraph 0136 [The user 40 may access the media server component 100 of the application 10 using a user interface provided by the UPnP AV compliant television. The availability of the bookmarked internet media content may be indicated to the user 40 by the media server component 100, and/or the user 40 may select a specific bookmark to view the associated media content on the UPnP AV compliant television. In response to selection of the specific bookmark, the UPnP AV compliant television may request the associated media content from the media server component 100 of the application 10. The

application 10 may request the associated media content from a media content site that provides the media content associated with the specific bookmark. The application 10 may receive the media content associated with the specific bookmark from the media content site. The transcoding engine 90 may transcode, may reformat and/or may repurpose the media content for compatibility with the UPnP AV compliant television. The application 10 may begin transmitting the transcoded, reformatted and/or repurposed media content to the UPnP AV compliant television for rendering as the transcoding engine 90 transcodes, reformats and/or repurposes the media content.], paragraph 0150 [information provided at step 214. The context information may indicate the current context and/or may determine context-specific behavior of a filter used in the filtering of the media content. The context information may be, for example, user input, user preferences, an application state, a current task, a list of one or more media destinations, media capabilities of the one or more media destinations, and/or the like.], paragraph 0153 [The rendering device may be, for example, a networked television, a networked stereo, a networked photo frame, a gaming console, a desktop PC with rendering capabilities, a laptop

PC with rendering capabilities, and/or the like.] The rendering device may have multiple media capabilities, audio, video and/or image and filters may be applied to select media content that is compatible to the capabilities of the device. That is, if audio content is passed through the filter, then the audio content will be played with the audio capability of the device, if video content is passed through the filter, then the video content will be played with the video capability of the device.).

Claim 24. Schwartz discloses the method of claim 23 and Schwartz further discloses the display device comprises a television set with a display screen (paragraph 0024 [The home network may have various rendering devices, such as, for example, networked stereos, televisions,]).

Claim 25. Schwartz discloses the method of claim 23 and Schwartz further discloses the display device comprises a laptop or personal computer (paragraph 0024 [The home network may have various rendering devices, such as, for example, networked stereos, televisions, personal computers,]).

Claim 26. Schwartz discloses the method of claim 23 and Schwartz further discloses each of the first and second commands represents an instruction to play the respective video file, to stop playing the respective video file or to pause playing the respective video file (paragraph 0119 [The rendering control instructions may

correspond to the playback controls, such as, for example, "Play," "Pause," "Stop," "Rewind," "Fast Forward," "Seek to a specific time," "Volume Up," "Volume Down," "Skip to the next media content object," "Skip to the previous media content object", "Jump to a specified media content object," and/or other playback controls known to one having ordinary skill in the art.]).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

> (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

6. Claims 11, 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schwartz et al. (US 2011/00600998 A1) in view of www.vbulletin.com (Best way to generate Random, Unique Session ID's), hereinafter referred to as vbulletin.

Claim 11. Schwartz discloses the method of claim 9 and Schwartz further discloses "In an embodiment, the method has the step of displaying page selection controls which indicate that multiple webpages are available in a current web browsing session wherein the page selection controls enable the user to select any of the multiple

webpages for display and further wherein one or more of the symbolic representations depict additional media content objects associated with a second webpage which is one of the multiple webpages wherein the second webpage is a different webpage than the first webpage." (paragraph 0064). Schwartz does not disclose assigning a randomly generated code to the display device each time the display device connects to the server system, as disclosed in the claims. However, in the same field of invention, vbulletin discloses "Best way to generate Random, Unique Session ID's" (title). Therefore, considering the teachings of Schwartz and vbullettin, it would have been obvious to one having ordinary skill in the art at the time of the invention to add assigning a randomly generated code to the display device each time the display device connects to the server system to the teachings of Schwartz. One would have been motivated to add assigning a randomly generated code to the display device each time the display device connects to the server system to the teachings of Schwartz to ensure that each user is assigned a unique session ID such that there is no conflicting user sessions from different users.

Claim 22 discloses a system for controlling playing of video content on a display device similar to the machine-implemented method of claim 11 and is rejected with the same rational.

7. Claim 27 is rejected under 35 U.S.C. 103(a) as being unpatentable over Schwartz et al. (US 2011/00600998 A1).

Claim 27. Schwartz discloses the method of claim 23, but Schwartz does not disclose the display device checks whether the respective media player needed to play the particular video file already is loaded in the display device before obtaining a copy of the media player over the Internet, as disclosed in the claims. However, Schwartz discloses "Some media content types may require the user to obtain and/or install an associated media player application and/or a plug-in program, but typically the associated media player application and/or the plug-in program are also available at no cost to the user. Thus, media content sites provide the user with a convenient means to access internet media content and to use the internet media content within the webpages provided by the websites." (paragraph 0004), "The internal list may include portable media playback devices which are not currently connected to and/or available to the application 10. For example, the internal list may include portable media playback devices which have previously been connected to the application 10, which have been configured by the user 40, and/or which are otherwise known to the application 10." (paragraph 0121). Therefore, considering the teachings of Schwartz, it would have been obvious to one having

ordinary skill in the art at the time of the invention to add the display device checks whether the respective media player needed to play the particular video file already is loaded in the display device before obtaining a copy of the media player over the Internet to the teachings of Schwartz. One would have been motivated to add the display device checks whether the respective media player needed to play the particular video file already is loaded in the display device before obtaining a copy of the media player over the Internet to the teachings of Schwartz in order to provide users with a convenient means to access internet media content.

Conclusion

8. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JOHN HEFFINGTON whose telephone number is (571)270-1696. The examiner can normally be reached on 8:30 am to 5:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Boris M. Pesin can be reached on 571-272-4070. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Subject: Private PAIR Correspondence Notification for Customer Number 26211

Jun 26, 2012 05:24:49 AM

Dear PAIR Customer:

FISH & RICHARDSON P.C. (NY)
P.O. BOX 1022
MINNEAPOLIS, MN 55440-1022
UNITED STATES

The following USPTO patent application(s) associated with your Customer Number, 26211 , have new outgoing correspondence. This correspondence is now available for viewing in Private PAIR.

The official date of notification of the outgoing correspondence will be indicated on the form PTOL-90 accompanying the correspondence.

Disclaimer:
The list of documents shown below is provided as a courtesy and is not part of the official file wrapper. The content of the images shown in PAIR is the official record.

Application	Document	Mailroom Date	Attorney Docket No.
13245001	CTFR	06/26/2012	30160-0002002
	892	06/26/2012	30160-0002002
	1449	06/26/2012	30160-0002002
	1449	06/26/2012	30160-0002002
	1449	06/26/2012	30160-0002002

To view your correspondence online or update your email addresses, please visit us anytime at https://sportal.uspto.gov/secure/myportal/privatepair.

If you have any questions, please email the Electronic Business Center (EBC) at EBC@uspto.gov with 'e-Office Action' on the subject line or call 1-866-217-9197 during the following hours:

Monday - Friday 6:00 a.m. to 12:00 a.m.

Thank you for prompt attention to this notice,

UNITED STATES PATENT AND TRADEMARK OFFICE

PATENT APPLICATION INFORMATION RETRIEVAL SYSTEM

Examiner-Initiated Interview Summary	Application No.	Applicant(s)	
	13/245,001	STROBER, DAVID	
	Examiner	Art Unit	
	JOHN HEFFINGTON	2172	

All participants (applicant, applicant's representative, PTO personnel):

(1) *JOHN HEFFINGTON*.

(2) *Samuel Borodach*.

(3) *David Strober*.

(4) _____.

Date of Interview: *17 July 2012*.

Type: ☒ Telephonic ☐ Video Conference
☐ Personal [copy given to: ☐ applicant ☐ applicant's representative]

Exhibit shown or demonstration conducted: ☐ Yes ☒ No.
If Yes, brief description: _____.

Issues Discussed ☐101 ☐112 ☒102 ☐103 ☐Others
(For each of the checked box(es) above, please describe below the issue and detailed description of the discussion)

Claim(s) discussed: *1,12 and 23*.

Identification of prior art discussed: *Schwartz*.

Substance of Interview
(For each issue discussed, provide a detailed description and indicate if agreement was reached. Some topics may include: identification or clarification of a reference or a portion thereof, claim interpretation, proposed amendments, arguments of any applied references etc...)

The inventor explained the inventive concept of the invention. The examiner, the inventor and the inventor's attorney discussed claim amendments that could overcome the prior art of record and place the claims in condition for allowance. The examiner stated that he would have to perform an updated search for any new amendments to the claims..

Applicant recordation instructions: It is not necessary for applicant to provide a separate record of the substance of interview.

Examiner recordation instructions: Examiners must summarize the substance of any interview of record. A complete and proper recordation of the substance of an interview should include the items listed in MPEP 713.04 for complete and proper recordation including the identification of the general thrust of each argument or issue discussed, a general indication of any other pertinent matters discussed regarding patentability and the general results or outcome of the interview, to include an indication as to whether or not agreement was reached on the issues raised.

NOTICE OF ALLOWANCE AND FEE(S) DUE

26211 7590 08/16/2012
FISH & RICHARDSON P.C. (NY)
P.O. BOX 1022
MINNEAPOLIS, MN 55440-1022

EXAMINER
HEFFINGTON, JOHN M

ART UNIT	PAPER NUMBER
2172	

DATE MAILED: 08/16/2012

APPLICATION NO.	FILING DATE	FIRST NAMED INVENTOR	ATTORNEY DOCKET NO.	CONFIRMATION NO.
13/245,001	09/26/2011	David Strober	30160-0002002	4575

TITLE OF INVENTION: PLAY CONTROL OF CONTENT ON A DISPLAY DEVICE

APPLN. TYPE	SMALL ENTITY	ISSUE FEE DUE	PUBLICATION FEE DUE	PREV. PAID ISSUE FEE	TOTAL FEE(S) DUE	DATE DUE
nonprovisional	YES	$870	$0	$0	$870	11/16/2012

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: Mail **Mail Stop ISSUE FEE**
Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450
or Fax (571)-273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

26211 7590 08/16/2012
FISH & RICHARDSON P.C. (NY)
P.O. BOX 1022
MINNEAPOLIS, MN 55440-1022

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

Certificate of Mailing or Transmission

I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO (571) 273-2885, on the date indicated below.

1. Change of correspondence address or indication of "Fee Address" (37 CFR 1.363).

❑ Change of correspondence address (or Change of Correspondence Address form PTO/SB/122) attached.

❑ "Fee Address" indication (or "Fee Address" Indication form PTO/SB/47; Rev 03-02 or more recent) attached. **Use of a Customer Number is required.**

2. For printing on the patent front page, list

(1) the names of up to 3 registered patent attorneys or agents OR, alternatively,

(2) the name of a single firm (having as a member a registered attorney or agent) and the names of up to 2 registered patent attorneys or agents. If no name is listed, no name will be printed.

1 _____
2 _____
3 _____

3. ASSIGNEE NAME AND RESIDENCE DATA TO BE PRINTED ON THE PATENT (print or type)

PLEASE NOTE: Unless an assignee is identified below, no assignee data will appear on the patent. If an assignee is identified below, the document has been filed for recordation as set forth in 37 CFR 3.11. Completion of this form is NOT a substitute for filing an assignment.

(A) NAME OF ASSIGNEE (B) RESIDENCE: (CITY and STATE OR COUNTRY)

Please check the appropriate assignee category or categories (will not be printed on the patent) : ❑ Individual ❑ Corporation or other private group entity ❑ Government

4a. The following fee(s) are submitted:

❑ Issue Fee

❑ Publication Fee (No small entity discount permitted)

❑ Advance Order - # of Copies _____

4b. Payment of Fee(s): **(Please first reapply any previously paid issue fee shown above)**

❑ A check is enclosed.

❑ Payment by credit card. Form PTO-2038 is attached.

❑ The Director is hereby authorized to charge the required fee(s), any deficiency, or credit any overpayment, to Deposit Account Number _____ (enclose an extra copy of this form).

5. **Change in Entity Status** (from status indicated above)

❑ a. Applicant claims SMALL ENTITY status. See 37 CFR 1.27.

❑ b. Applicant is no longer claiming SMALL ENTITY status. See 37 CFR 1.27(g)(2).

NOTE: The Issue Fee and Publication Fee (if required) will not be accepted from anyone other than the applicant; a registered attorney or agent; or the assignee or other party in interest as shown by the records of the United States Patent and Trademark Office.

Authorized Signature _____ Date _____

Typed or printed name _____ Registration No. _____

This collection of information is required by 37 CFR 1.311. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, Virginia 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 4 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 4 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Notice of Allowability	Application No.	Applicant(s)	
	13/245,001	STROBER, DAVID	
	Examiner	Art Unit	
	JOHN HEFFINGTON	2172	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--

All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. **THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS.** This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

1. ☒ This communication is responsive to *proposed claim amendments dated 30 July 2012.*.

2. ☐ An election was made by the applicant in response to a restriction requirement set forth during the interview on _____; the restriction requirement and election have been incorporated into this action.

3. ☒ The allowed claim(s) is/are *1-4, 6-27*.

4. ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
   a) ☐ All b) ☐ Some* c) ☐ None of the:
      1. ☐ Certified copies of the priority documents have been received.
      2. ☐ Certified copies of the priority documents have been received in Application No. _____ .
      3. ☐ Copies of the certified copies of the priority documents have been received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

   * Certified copies not received: _____.

Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application.
THIS THREE-MONTH PERIOD IS NOT EXTENDABLE.

5. ☐ A SUBSTITUTE OATH OR DECLARATION must be submitted. Note the attached EXAMINER'S AMENDMENT or NOTICE OF INFORMAL PATENT APPLICATION (PTO-152) which gives reason(s) why the oath or declaration is deficient.

6. ☐ CORRECTED DRAWINGS (as "replacement sheets") must be submitted.
   (a) ☐ including changes required by the Notice of Draftsperson's Patent Drawing Review (PTO-948) attached
      1) ☐ hereto or 2) ☐ to Paper No./Mail Date _____.
   (b) ☐ including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No./Mail Date _____.

   Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the front (not the back) of each sheet. Replacement sheet(s) should be labeled as such in the header according to 37 CFR 1.121(d).

7. ☐ DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.

Attachment(s)

1. ☒ Notice of References Cited (PTO-892)
2. ☐ Notice of Draftperson's Patent Drawing Review (PTO-948)
3. ☐ Information Disclosure Statements (PTO/SB/08), Paper No./Mail Date _____
4. ☐ Examiner's Comment Regarding Requirement for Deposit of Biological Material
5. ☐ Notice of Informal Patent Application
6. ☒ Interview Summary (PTO-413), Paper No./Mail Date *20120728* .
7. ☒ Examiner's Amendment/Comment
8. ☒ Examiner's Statement of Reasons for Allowance
9. ☐ Other _____.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Samuel Borodach on 26 July 2012 and 30 July 2012.

The application has been amended as follows:

Claim 1. A machine-implemented method of controlling presentation of video content on a display device [[by a]] that loads any one of a plurality of different media player players, the method comprising:

assigning, by a server system, a synchronization code to thfe display device;

receiving, in the server system, a message from a personal computing device that is separate from the server system and separate from the display device, wherein the message includes the synchronization code;

storing, by the server system, a record establishing an association between the personal computing device and the display device based on the synchronization code;

receiving, in [[a]] the server system, one or more signals from ~~a remote~~ the personal computing device, the one or more signals specifying a video file to be acted upon and identifying a particular media player for playing the video content, the one or

more signals further including a universal playback control command for controlling playing of the video content on the display device by the particular media player,

converting, by the server system, the universal playback control command into corresponding programming code to control playing of the video content on the display device by the particular media player, wherein converting the universal playback control command includes selecting from among a plurality of specific commands, each of which represents a corresponding playback control command for a respective media player; and

storing, in a database associated with the server system, ~~a message~~ information for transmission to or retrieval by the display device, wherein the ~~message~~ information specifies the video file to be acted upon, identifies the particular media player for playing the video content, and includes the corresponding programming code to control playing of the video content on the display device by the particular media player in accordance with the universal playback control command.

Claim 2. The method of claim 1 including:

checking, in the server system, the identity of the media player identified in the one or more signals from the personal computing device;

loading an appropriate set of protocols or application programming interfaces from a library based on the identity of the media player; and

converting the command from the personal computing device into [[a]] corresponding ~~JavaScript~~ code to control the media player.

Claim 9. The method of claim 1 ~~including: receiving, in the server system, a code from the personal computing device,~~ wherein the synchronization code is uniquely associated with the display device on which the video content is to be played[[;]] ~~and storing in the server system a record establishing a connection between the personal computing device and the display device based on the code~~.

Claim 10. The method of claim 9 wherein the synchronization code is different from an IP address associated with the display device and is different from a MAC address associated with the display device.

Claim 11. The method of claim 9 wherein assigning a synchronization code includes ~~including~~ assigning a randomly generated code to the display device each time the display device connects to the server system.

Claim 12. A system for controlling playing of video content on a display device [[by a]] that loads any one of a plurality of different media ~~player~~ players, the system comprising:

a server system;

a first database storing a relationship between a personal computing device and the display device based on a synchronization code assignd by the server system to the display device and received by the server system in a message from the personal computing device, wherein the personal computing device is separate from the server system and separate from the display device; and

a second database;

wherein the server system is ~~operable~~ configured to receive one or more signals from [[a]] the ~~remote~~ personal computing device, the one or more signals specifying a video file to be acted upon and identifying a particular media player for playing the video content, the one or more signals further including a universal playback control command for controlling playing of the video content on the display device,

one or more non-transitory computer-readable media storing instructions that when executed by the server system, cause the server system to perform operations including converting the universal playback control command into corresponding programming code to control playing of the video content of the particular media player, wherein converting the universal playback control command includes selecting from

among a plurality of specific commands, each of which represents a corresponding playback control command for a respective media player;

the server system being further ~~operable~~ configured to store in the second database ~~a message~~ information for transmission to or retrieval by the display device, wherein the ~~message~~ information specifies the video file to be acted upon, identifies the particular media player for playing the video content, and includes the corresponding programming code to control playing of the video content on the display device by the particular media player in accordance with the universal playback control command.

Claim 13. The system of claim 12 including:

library storing protocols or application programming interfaces,

wherein the server system is ~~operable~~ configured to check the identity of the media player identified in the one or more signals from the personal computing device, load an appropriate set of protocols or application programming interfaces from the library based on the identity of the media player, and convert the command from the personal computing device into a corresponding programming code used by the display device to control the media player.

Claim 14. The system of claim 12 including:

a look-up table storing a plurality of commands each of which is for a particular type of media player,

wherein the server system is ~~operable~~ configured to convert the command into corresponding programming code to control the media player based on information in the look-up table.

16. The system of claim 15 the server system is ~~operable~~ configured to convert the universal command by selecting from among the plurality of specific commands stored in the look-up table.

Claim 20. The system of claim 12 wherein ~~the server system is operable to receive a code from the personal computing device, wherein~~ the synchronization code is uniquely associated with the display device on which the video content is to be played, ~~the server system further being operable to store the record establishing a connection between the personal computing device and the display device based on the code~~.

Claim 21. The system of claim 20 wherein the synchronization code is different from an IP address associated with the display device and is different from a MAC address associated with the display device.

Claim 22. The system of claim 20 wherein the server system is ~~operable~~ configured to assign as the synchronization code a randomly generated code ~~to the display device~~ each time the display device connects to the server system.

Claim 23. An automated machine-implemented method of presenting video content on a display device [[by a]] that loads any one of a plurality of different media player, the method comprising:

displaying, by the display device, a synchronization code that was assigned to the display device by a server system, the server system subsequently storing, based on a message from a personal computing device that is separate from the server system and the display device, an association between the display device and the personal computing device, the message from the personal computing device including the synchronization code.

retrieving, by the display device from a server system, first information that specifies a first video file to be acted upon, that identifies a first media player for playing the first video file, and that indicates corresponding programming code to control playing of the first video file on the display device by the first media player in accordance with a first playback control command, wherein the server system previously received, from the personal computing device, one or more signals specifying the first video file identifying the first media player and including the first playback control command;

obtaining, by the display device, over the Internet the first media player for playing the first video file;

loading the first media player in the display device;

executing the first playback control command with respect to the first video file using the first media player;

subsequently retrieving, by the display device from the server system, second information that specifies a second video file to be acted upon, that identifies a second media player different from the first media player for playing the second video file, and that indicates corresponding programming code to control playing of the second video file on the display device by the second media player in accordance with a second playback control command, wherein the server system previously received, from the personal computing device, one or more signals specifying the second video file, identifying the second media player and including the second playback control command;

obtaining, by the display device, over the Internet the second media player for playing the second video file;

loading the second media player in the display device; and

executing the second playback control command with respect to the second video file using the second media player.

Claim 27. The method of claim 23 wherein the display device checks whether the respective media player needed to play the particular one of the video ~~file~~ files already is loaded in the display device before obtaining a copy of the media player over the Internet.

Summary of the Prior Art of Record

Schwartz et al. (US 2011/0060998 A1) – Schwartz discloses A system and a method manage internet media content by identifying relevant media content associated with a webpage, generating a symbolic representation for the identified media and/or presenting the symbolic representation of the identified media to enable media management, organization, retrieval, consumption and/or redirection functionality to be integrated with a web browsing experience. The system and the method may provide enhanced multimedia functionality integrated with a web browsing experience using an application providing web browser functionality, a plug-in program for an existing web browser, and/or an application associated and/or in communication with a web browser.

Hjelmeland Almas et al. (US 2008/0301737 A1) - A portable communication device is equipped with a content and/or channel recommendation function that is configured to provide a user with content recommendations for watching a television program. The portable communication device is used as a remote control to control various aspects of the television. In one embodiment, channel recommendations are made based upon the user's mobile activities. Such activities include: web browsing, web searching,

multimedia content rendered and/or downloaded on the portable communications device, contact information, and calendar information stored on the portable communication device. In another embodiment, the user may view television programs previously and/or currently being watched by a contact.

2. The following is an examiner's statement of reasons for allowance:

Independent claims 1, 12 and 23 are allowable over the prior art of record, specifically, the prior art of record fails to disclose a non-obvious combination made without impermissible hindsight of:

assigning, by a server system, a synchronization code to a display device; receiving, in the server system, a message from a personal computing device that is separate from the server system and separate from the display device, wherein the message includes the synchronization code, one or more signals specifying a video file to be acted upon and identifying a particular media player for playing the video content, the one or more signals further including a universal playback control command for controlling playing of the video content on the display device by the particular media player; storing, in a database associated with the server system, information for transmission to or retrieval by the display device, wherein the information specifies the video file to be acted upon, identifies the particular media player for playing the video content, and includes the

corresponding programming code to control playing of the video content on the display device by the particular media player in accordance with the universal playback control command.

The respective dependent claims add further limitations to the allowable subject matter of the independent claims and are, therefore, allowable over the prior art of record. Specifically, the prior art fails to clearly teach or fairly suggest the combination of elements as recited in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JOHN HEFFINGTON whose telephone number is (571)270-1696. The examiner can normally be reached on 8:30 am to 5:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner’s supervisor, Boris M. Pesin can be reached on 571-272-4070. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

user session

Like 1 0 0

(1) The session of activity that a user with a unique IP address spends on a Web site during a specified period of time. The number of user sessions on a site is used in measuring the amount of traffic a Web site gets. The site administrator determines what the time frame of a user session will be (e.g., 30 minutes). If the visitor comes back to the site within that time period, it is still considered one user session because any number of visits within that 30 minutes will only count as one session. If the visitor returns to the site after the allotted time period has expired, say an hour from the initial visit, then it is counted as a separate user session.

Contrast with unique visitor, hit, click-through and page view, which are all other ways that site administrators measure the amount of traffic a Web site gets.

(2) The period of time a user interfaces with an application. The user session begins when the user accesses the application and ends when the user quits the application.

View Full Version : Best way to generate Random, Unique Session ID's

Lorddraco98 Mon 2nd Dec '02, 9:08pm

i'm working on building a user object for a website I'm working on. In the user object, userid and sessionid must be stored into a cookie and then sent to the user. The userid and sessionid along with info about the user(IP, username, etc) are inserted into a MySQL DB. I'm looking for a way to generate a random, unique sessionid that PHP can make, store in the DB, insert into that cookie, and can also use to look up a user in the DB. So what's the best way to generate a random, unique session ID with PHP??

Gamefreak Wed 4th Dec '02, 4:47pm

use the function uniqid(val$)

the val$ can be blank, but if you put something in there it will have that val$ in the id. After you do that, then put the result through md5(), it will give you good session ids.

Scott MacVicar Wed 4th Dec '02, 8:19pm

I'm looking for a way to generate a random, unique sessionid that PHP can make, store in the DB, insert into that cookie, and can also use to look up a user in the DB. So what's the best way to generate a random, unique session ID with PHP?? just try and shove as much random stuff into md5, i use the following

```
md5(uniqid(microtime()) . $_SERVER['REMOTE_ADDR'] . $_SERVER['HTTP_USER_AGENT']);
```

Subject: Private PAIR Correspondence Notification for Customer Number 26211

Aug 16, 2012 05:27:46 AM

Dear PAIR Customer:

FISH & RICHARDSON P.C. (NY)
P.O. BOX 1022
MINNEAPOLIS, MN 55440-1022
UNITED STATES

The following USPTO patent application(s) associated with your Customer Number, 26211 , have new outgoing correspondence. This correspondence is now available for viewing in Private PAIR.

The official date of notification of the outgoing correspondence will be indicated on the form PTOL-90 accompanying the correspondence.

Disclaimer:
The list of documents shown below is provided as a courtesy and is not part of the official file wrapper. The content of the images shown in PAIR is the official record.

Alexandria, VA 22313-1450

RESPONSE TO NOTICE OF ALLOWANCE

In response to the Notice of Allowance mailed August 16, 2012, enclosed is a completed issue fee transmittal form PTOL-85b.

The issue fee in the amount of $870 is being paid concurrently herewith. In addition, please apply any other necessary charges or credits to Deposit Account 06-1050, referencing the above attorney docket number.

COMMENTS ON REASONS FOR ALLOWANCE

The Examiner's allowance of the claims is appreciated. The Applicant submits the following comments concerning the Examiner's Reasons for Allowance cited in the Notice of Allowability. It is the subject matter of each claim as a whole that is patentable, not any particular feature recited in the claim(s). The Applicant does not concede that the reasons for allowance given by the Examiner are the only reasons that make the claims allowable and does not make any admission or concession concerning the Examiner's statement.

Respectfully submitted,

Date: August 28, 2012

/Samuel Borodach/

PART B – FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: Mail **Mail Stop ISSUE FEE**
Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450
or Fax (571) 273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 4 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Legibly mark-up with any corrections or use Block 1)

26211 7590 8/16/12

FISH & RICHARDSON P.C.
P.O. Box 1022
Minneapolis, MN 55440-1022

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

Certificate of Mailing or Transmission
I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO, on the date indicated below.

1. Change of correspondence address or indication of "Fee Address" (37 CFR 1.363).

[ ] Change of correspondence address (or Change of Correspondence Address form PTO/SB/122) attached.

[ ] "Fee Address" indication (or "Fee Address" Indication form PTO/SB/47; Rev 03-02 or more recent) attached. **Use of a Customer Number is required.**

2. For printing on the patent front page, list (1) the names of up to 3 registered patent attorneys or agents OR, alternatively, (2) the name of a single firm (having as a member a registered attorney or agent) and the names of up to 2 registered patent attorneys or agents. If no name is listed, no name will be printed.

1. **Fish & Richardson P.C.**
2.
3.

3. ASSIGNEE NAME AND RESIDENCE DATA TO BE PRINTED ON THE PATENT (print or type)

PLEASE NOTE: Unless an assignee is identified below, no assignee data will appear on the patent. Inclusion of assignee data is only appropriate when an assignment has been previously submitted to the USPTO or is being submitted under separate cover. Completion of this form is NOT a substitute for filing an assignment.

(A) NAME OF ASSIGNEE (B) RESIDENCE (CITY and STATE OR COUNTRY)

Touchstream Technologies, Inc. **Valhalla, NY**

Please check the appropriate assignee category or categories (will not be printed on the patent): [ ] individual [X] corporation or other private group entity [ ] government

4a. The following fee(s) are enclosed:
[X] Issue Fee
[ ] Publication Fee (No small entity discount permitted)
[ ] Advance Order - # of Copies _____

4b. Payment of Fee(s):
[ ] A check in the amount of the fee(s) is enclosed.
[ ] Payment by credit card. Form PTO-2038 is attached.
[X] The Director is hereby authorized to charge the required fee(s), or credit any overpayment, to Deposit Account Number 06-1050 (enclose an extra copy of this form).

5. **Change in Entity Status** (from status indicated above)

[ ]a. Applicant claims SMALL ENTITY status. See 37 CFR 1.27. [ ]b. Applicant is no longer claiming SMALL ENTITY status. See 37 CFR 1.27(g)(2).

The Director of the USPTO is requested to apply the Issue Fee and Publication Fee (if any) or to re-apply any previously paid issue fee to the application identified above.
NOTE: The issue Fee and Publication Fee (if required) will not be accepted from anyone other than the applicant, a registered agent or, or the assignee or other party in interest as shown by the records of the United States Patent and Trademark Office.

(Authorized Signature) /Samuel Borodach/ (Date) **August 28, 2012**

Typed or Printed Name **Samuel Borodach** Registration No. 38,388

This collection of information is required by 37 CFR 1.311. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, Virginia 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450.
Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111
If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371
If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office
If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

AMENDMENT AFTER ALLOWANCE
PURSUANT TO 37 C.F.R. §1.312

Please amend the application as indicated on the following pages. This amendment is being filed concurrently with the payment of the issue fee.

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1. (Currently amended) A machine-implemented method of controlling presentation of video content on a display device that loads any one of a plurality of different media ~~player~~ players, the method comprising:

assigning, by a server system, a synchronization code to the [[thfe]] display device;

receiving, in the server system, a message from a personal computing device that is separate from the server system and separate from the display device, wherein the message includes the synchronization code;

storing, by the server system, a record establishing an association between the personal computing device and the display device based on the synchronization code;

receiving, in the server system, one or more signals from the personal computing device, the one or more signals specifying a video file to be acted upon and identifying a particular media player for playing the video content, the one or more signals further including a universal playback control command for controlling playing of the video content on the display device by the particular media player,

converting, by the server system, the universal playback control command into corresponding programming code to control playing of the video content on the display device by the particular media player, wherein converting the universal playback control command includes selecting from among a plurality of specific commands, each of which represents a corresponding playback control command for a respective media player; and

storing, in a database associated with the server system, information for transmission to or retrieval by the display device, wherein the information specifies the video file to be acted upon, identifies the particular media player for playing the video content, and includes the

corresponding programming code to control playing of the video content on the display device by the particular media player in accordance with the universal playback control command.

2. (Previously presented) The method of claim 1 including:

checking, in the server system, the identity of the media player identified in the one or more signals from the personal computing device;

loading an appropriate set of protocols or application programming interfaces from a library based on the identity of the media player; and

converting the command from the personal computing device into a corresponding code to control the media player.

3. (Previously presented) The method of claim 1 wherein converting the command into corresponding programming code to control the media player includes using information in a look-up table.

4. (Previously presented) The method of claim 3 wherein the look-up table stores a plurality of specific commands, each of which represents, respectively, a corresponding command for a different media player.

5. (Canceled)

6. (Original) The method of claim 1 wherein the universal command represents an instruction to play the video content, to stop playing the video content or to pause playing the video content.

7. (Original) The method of claim 1 wherein the video content is an interactive video game.

8. (Original) The method of claim 1 wherein the video content is streaming media.

9. (Previously presented) The method of claim 1 wherein the synchronization code is uniquely associated with the display device on which the video content is to be played.

10. (Previously presented) The method of claim 9 wherein the synchronization code is different from an IP address associated with the display device and is different from a MAC address associated with the display device.

11. (Previously presented) The method of claim 9 wherein assigning a synchronization code includes assigning a randomly generated code to the display device each time the display device connects to the server system.

12. (Previously presented) A system for controlling playing of video content on a display device that loads any one of a plurality of different media players, the system comprising:

a server system;

a first database storing a relationship between a personal computing device and the display device based on a synchronization code assigned by the server system to the display device and received by the server system in a message from the personal computing device, wherein the personal computing device is separate from the server system and separate from the display device; and

a second database;

wherein the server system is configured to receive one or more signals from the personal computing device, the one or more signals specifying a video file to be acted upon and identifying a particular media player for playing the video content, the one or more signals further including a universal playback control command for controlling playing of the video content on the display device,

one or more non-transitory computer-readable media storing instructions that when executed by the server system, cause the server system to perform operations including converting the universal playback control command into corresponding programming code to control playing of the video content by the particular media player, wherein converting the universal playback control command includes selecting from among a plurality of specific commands, each of which represents a corresponding playback control command for a respective media player;

the server system being further configured to store in the second database information for transmission to or retrieval by the display device, wherein the information specifies the video file to be acted upon, identifies the particular media player for playing the video content, and includes the corresponding programming code to control playing of the video content on the display device by the particular media player in accordance with the universal playback control command.

13. (Previously presented) The system of claim 12 including:

a library storing protocols or application programming interfaces,

wherein the server system is configured to check the identity of the media player identified in the one or more signals from the personal computing device, load an appropriate set of protocols or application programming interfaces from the library based on the identity of the media player, and convert the command from the personal computing device into a corresponding programming code to control the media player.

14. (Previously presented) The system of claim 12 including:

a look-up table storing a plurality of commands each of which is for a particular type of media player,

wherein the server system is configured to convert the command into corresponding programming code to control the media player based on information in the look-up table.

15. (Previously presented) The system of claim 12 wherein the look-up table stores a correspondence between the universal command and a plurality of specific commands, each of which is for a different media player.

16. (Previously presented) The system of claim 15 the server system is configured to convert the universal command by selecting from among the plurality of specific commands stored in the look-up table.

17. (Original) The system of claim 12 wherein the universal command represents an instruction to play the video content, to stop playing the video content or to pause playing the video content.

18. (Original) The system of claim 12 wherein the video content is an interactive video game.

19. (Original) The system of claim 12 wherein the video content is streaming media.

20. (Previously presented) The system of claim 12 wherein the synchronization code is uniquely associated with the display device on which the video content is to be played.

21. (Previously presented) The system of claim 20 wherein the synchronization code is different from an IP address associated with the display device and is different from a MAC address associated with the display device.

22. (Previously presented) The system of claim 20 wherein the server system is configured to assign as the synchronization code a randomly generated code each time the display device connects to the server system.

23. (Currently amended) An automated machine-implemented method of presenting video content on a display device that loads any one of a plurality of different media ~~player~~ players, the method comprising:

displaying, by the display device, a synchronization code that was assigned to the display device by a server system, the server system subsequently storing, based on a message from a personal computing device that is separate from the server system and the display device, an association between the display device and the personal computing device, the message from the personal computing device including the synchronization code; [[.]]

retrieving, by the display device from the server system, first information that specifies a first video file to be acted upon, that identifies a first media player for playing the first video file, and that indicates corresponding programming code to control playing of the first video file on the display device by the first media player in accordance with a first playback control command, wherein the server system previously received, from the personal computing device, one or more signals specifying the first video file, identifying the first media player and including the first playback control command;

obtaining, by the display device, over the Internet the first media player for playing the first video file;

loading the first media player in the display device;

executing the first playback control command with respect to the first video file using the first media player;

subsequently retrieving, by the display device from the server system, second information that specifies a second video file to be acted upon, that identifies a second media player different from the first media player for playing the second video file, and that indicates corresponding programming code to control playing of the second video file on the display device by the second media player in accordance with a second playback control command, wherein the server system previously received, from the personal computing device, one or more signals specifying the second video file, identifying the second media player and including the second playback control command;

obtaining, by the display device, over the Internet the second media player for playing the second video file;

loading the second media player in the display device; and

executing the second playback control command with respect to the second video file using the second media player.

24. (Original) The method of claim 23 wherein the display device comprises a television set with a display screen.

25. (Original) The method of claim 23 wherein the display device comprises a laptop or personal computer.

26. (Original) The method of claim 23 wherein each of the first and second commands represents an instruction to play the respective video file, to stop playing the respective video file or to pause playing the respective video file.

27. (Original) The method of claim 23 wherein the display device checks whether the respective media player needed to play the particular one of the video files already is loaded in the display device before obtaining a copy of the media player over the Internet.

REMARKS

Applicant thanks the Examiner for allowing the claims. This amendment is submitted to correct a few typographical errors that were introduced by the Examiner's Amendment of August 16, 2012.

Please apply any necessary charges or credits to Deposit Account 06-1050, referencing the above attorney docket number.

Respectfully submitted,

Date: August 28, 2012

Decision Date : September 13, 2012

In re Application of :

David Strober

DECISION ON PETITION

UNDER CFR 1.313(c)(2)

Application No : 13245001

Filed : 26-Sep-2011

Attorney Docket No : 30160-0002002

This is an electronic decision on the petition under 37 CFR 1.313(c)(2), filed September 13, 2012, to withdraw the above-identified application from issue after payment of the issue fee.

The petition is **GRANTED.**

The above-identified application is withdrawn from issue for consideration of a submission under 37 CFR 1.114 (request for continued examination). See 37 CFR 1.313(c)(2).

Petitioner is advised that the issue fee paid in this application cannot be refunded. If, however, this application is again allowed, petitioner may request that it be applied towards the issue fee required by the new Notice of Allowance.

Telephone inquiries concerning this decision should be directed to the Patent Electronic Business Center (EBC) at 866-217-9197.

This application file is being referred to Technology Center AU 2172 for processing of the request for continuing examination under 37 CFR 1.114 .

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111
If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371
If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office
If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Doc Code: PET.AUTO Document Description: Petition automatically granted by EFS-Web	PTO/SB/140 U.S. Patent and Trademark Office Department of Commerce

Electronic Petition Request	**PETITION TO WITHDRAW AN APPLICATION FROM ISSUE AFTER PAYMENT OF THE ISSUE FEE UNDER 37 CFR 1.313(c)**
Application Number	13245001
Filing Date	26-Sep-2011
First Named Inventor	David Strober
Art Unit	2172
Examiner Name	JOHN HEFFINGTON
Attorney Docket Number	30160-0002002
Title	PLAY CONTROL OF CONTENT ON A DISPLAY DEVICE

An application may be withdrawn from issue for further action upon petition by the applicant. To request that the Office withdraw an application from issue, applicant must file a petition under this section including the fee set forth in § 1.17(h) and a showing of good and sufficient reasons why withdrawal of the application from issue is necessary.

APPLICANT HEREBY PETITIONS TO WITHDRAW THIS APPLICATION FROM ISSUE UNDER 37 CFR 1.313(c).

A grantable petition requires the following items:
(1) Petition fee; and
(2) One of the following reasons:
(a) Unpatentability of one or more claims, which must be accompanied by an unequivocal statement that one or more claims are unpatentable, an amendment to such claim or claims, and an explanation as to how the amendment causes such claim or claims to be patentable;
(b) Consideration of a request for continued examination in compliance with § 1.114 (for a utility or plant application only); or
(c) Express abandonment of the application. Such express abandonment may be in favor of a continuing application, but not a CPA under 37 CFR 1.53(d).

Petition Fee

☐ Applicant claims SMALL ENTITY status. See 37 CFR 1.27.

☐ Applicant is no longer claiming SMALL ENTITY status. See 37 CFR 1.27(g)(2).

☒ Applicant(s) status remains as SMALL ENTITY.

☐ Applicant(s) status remains as other than SMALL ENTITY

Reason for withdrawal from issue

◯ One or more claims are unpatentable ◉ Consideration of a request for continued examination (RCE) (List of Required Documents and Fees) ◯ Applicant hereby expressly abandons the instant application (any attorney/agent signing for this reason must have power of attorney pursuant to 37 CFR 1.32(b)).
RCE request,submission, and fee. ☐ I certify, in accordance with 37 CFR 1.4(d)(4) that : The RCE request ,submission, and fee have already been filed in the above-identified application on ☒ Are attached.
THIS PORTION MUST BE COMPLETED BY THE SIGNATORY OR SIGNATORIES I certify, in accordance with 37 CFR 1.4(d)(4) that I am: ◉ An attorney or agent registered to practice before the Patent and Trademark Office who has been given power of attorney in this application. ◯ An attorney or agent registered to practice before the Patent and Trademark Office, acting in a representative capacity. ◯ A sole inventor ◯ A joint inventor; I certify that I am authorized to sign this submission on behalf of all of the inventors ◯ A joint inventor; all of whom are signing this e-petition ◯ The assignee of record of the entire interest that has properly made itself of record pursuant to 37 CFR 3.71

TRANSMITTAL OF A QUICK PATH INFORMATION DISCLOSURE STATEMENT (QPIDS) SUBMISSION

In accordance with the QPIDS Pilot Program, as described in the Federal Register, Vol. 77, No. 91, Thursday, May 10, 2012, page 27443, Applicant submits the following items:

1) an Information Disclosure Statement (IDS) including the fee under 37 CFR 1.17(p);
2) a Web-based ePetition to withdraw from issue under 37 CFR 1.313(c)(2), including the fee under 37 CFR 1.17(h);
3) an RCE (to be treated as "conditional" in accordance with the QPIDS Pilot Program).

Please apply any necessary charges to Deposit Account No. 06-1050.

Respectfully submitted,

Date: September 13, 2012

/Samuel Borodach/

Form PCT/ISA/210 (second sheet) (July 2009)

INTERNATIONAL SEARCH REPORT

International application No.
PCT/US2012/033314

Continuation of Box No. III:

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In order for all inventions to be examined, the appropriate additional examination fees must be paid.

Group I, claims 1-21, 27-38, 67, drawn to a machine implemented method of controlling presentation of video content on a display device by a media player, a system for controlling playing a video content on a display device and a server system for controlling presentation of content on a display device the system and an automated method of controlling presentation of content on a display device, having the steps of the server system converting the universal playback control command into corresponding code to control playing the video content, the converting includes selecting a specific command for a respective media player; storing a message for the display device in a database, the message specifies the video file, media player and corresponding code to control playing the video content.
Group II, claims 22-26, 39-47, 68, drawn to an automated machine-implemented method of presenting video content on a display device, by a media player, an apparatus for presenting content and an automated method of presenting content on a display device, having the steps of the display device retrieving information from a server system; the display device obtaining over the internet the media player; loading the media player in the display device; executing the playback control command using the media player; retrieving second information; the display device obtaining over the internet a second media player; loading the second media player; executing the second playback control command using the second media player.
Group III, claims 48-66, 69-70, drawn to a personal computing device, and a system for presenting and controlling content on a display device and a method of controlling content to be presented on a display device, having a transceiver to establish connections to a network; means for receiving user input; processing circuitry to process incoming and outgoing communications and user input; the device transmitting a message according to a specified format over the network to a server system; the device is operable to control playing the content on the display device based on user selected commands transmitted to the server system from the device.

The inventions listed as Groups I, II and III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the special technical feature of the Group I invention: the server system converting the universal playback control command into corresponding code to control playing the video content, the converting includes selecting a specific command for a respective media player; storing a message for the display device in a database, the message specifies the video file, media player and corresponding code to control playing the video content as claimed therein is not present in the invention of Groups II and III. The special technical feature of the Group II invention: the display device retrieving information from a server system; the display device obtaining over the internet the media player; loading the media player in the display device; executing the playback control command using the media player; retrieving second information; the display device obtaining over the internet a second media player; loading the second media player; executing the second playback control command using the second media player as claimed therein is not present in the invention of Groups I or III. The special technical feature of the Group III invention: a transceiver to establish connections to a network; means for receiving user input; processing circuitry to process incoming and outgoing communications and user input; the device transmitting a message according to a specified format over the network to a server system; the device is operable to control playing the content on the display device based on user selected commands transmitted to the server system from the device as claimed therein is not present in the invention of Groups I or II.

Groups I, II and III lack unity of invention because even though the inventions of these groups require the technical feature of a server system receiving signals from a personal computing device; information/signals specifying a video file to be acted upon, a media player for playing the video file and corresponding programming code to control playing the video file, this technical feature is not a special technical feature as it does not make a contribution over the prior art in view of US 2010/0027974 A1 (ANSARI) 04 February 2010 (04.02.2010) figures 2, 6; paragraphs 22-30.

Since none of the special technical features of the Group I, II or III inventions are found in more than one of the inventions, unity of invention is lacking.

Applicant TOUCHSTREAM TECHNOLOGIES, INC.

1. This opinion contains indications relating to the following items:

- ☒ Box No. I Basis of the opinion
- ☐ Box No. II Priority
- ☐ Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- ☒ Box No. IV Lack of unity of invention
- ☒ Box No. V Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- ☐ Box No. VI Certain documents cited
- ☐ Box No. VII Certain defects in the international application
- ☐ Box No. VIII Certain observations on the international application

2. **FURTHER ACTION**

If a demand for international preliminary examination is made, this opinion will be considered to be a written opinion of the International Preliminary Examining Authority ("IPEA") except that this does not apply where the applicant chooses an Authority other than this one to be the IPEA and the chosen IPEA has notified the International Bureau under Rule 66.1*bis*(b) that written opinions of this International Searching Authority will not be so considered.

If this opinion is, as provided above, considered to be a written opinion of the IPEA, the applicant is invited to submit to the IPEA a written reply together, where appropriate, with amendments, before the expiration of 3 months from the date of mailing of Form PCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later.

For further options, see Form PCT/ISA/220.

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US2012/033314

Box No. I Basis of this opinion

1. With regard to the **language**, this opinion has been established on the basis of:

   ☒ the international application in the language in which it was filed.

   ☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

2. ☐ This opinion has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43*bis*.1(a))

3. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, this opinion has been established on the basis of a sequence listing filed or furnished:

   a. (means)

      ☐ on paper

      ☐ in electronic form

   b. (time)

      ☐ in the international application as filed

      ☐ together with the international application in electronic form

      ☐ subsequently to this Authority for the purposes of search

4. ☐ In addition, in the case that more than one version or copy of a sequence listing has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

5. Additional comments:

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US2012/033314

Box No. IV Lack of unity of invention

1. ☒ In response to the invitation (Form PCT/ISA/206) to pay additional fees the applicant has, within the appicable time limit:

   ☐ paid additional fees

   ☐ paid additional fees under protest and, where applicable, the protest fee

   ☐ paid additional fees under protest but the applicable protest fee was not paid

   ☒ not paid additional fees

2. ☐ This Authority found that the requirement of unity of invention is not complied with and chose not to invite the applicant to pay additional fees.

3. This Authority considers that the requirement of unity of invention in accordance with Rule 13.1, 13.2 and 13.3 is

   ☐ complied with

   ☒ not complied with for the following reasons:

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In order for all inventions to be examined, the appropriate additional examination fess must be paid.

Group I, claims 1-21, 27-38, 67, drawn to a machine implemented method of controlling presentation of video content on a display device by a media player, a system for controlling playing a video content on a display device and a server system for controlling presentation of content on a display device the system and an automated method of controlling presentation of content on a display device, having the steps of the server system converting the universal playback control command into corresponding code to control playing the video content, the converting includes selecting a specific command for a respective media player; storing a message for the display device in a database, the message specifies the video file, media player and corresponding code to control playing the video content.
Group II, claims 22-26, 39-47, 68, drawn to an automated machine-implemented method of presenting video content on a display device, by a media player, an apparatus for presenting content and an automated method of presenting content on a display device, having the steps of the display device retrieving information from a server system; the display device obtaining over the internet the media player; loading the media player in the display device; executing the playback control command using the media player; retrieving second information; the display device obtaining over the internet a second media player; loading the second media player; executing the second playback control command using the second media player.
Group III, claims 48-66, 69-70, drawn to a personal computing device, and a system for presenting and controlling content on a display device and a method of controlling content to be presented on a display device, having a transceiver to establish connections to a network; means for receiving user input; processing circuitry to process incoming and outgoing communications and user input; the device transmitting a message according to a specified format over the network to a server system; the device is operable to control playing the content on the display device based on user selected commands transmitted to the server system from the device.

The inventions listed as Groups I, II and III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the special technical feature of the Group I invention: the server system converting the universal playback control command into corresponding code to control playing the video content, the converting includes selecting a specific command for a respective media player; storing a message for the display device in a database, the message specifies the video file, media player and corresponding code to control playing the video content as claimed therein is not present in the invention of Groups II and III. The special technical feature of the Group II invention: the display device retrieving information from a server system; the display device obtaining over the internet the media player; loading the media player in the display device; executing the playback control command using the media player; retrieving second information; the display device obtaining over the internet a second media player; loading the second media player; executing the second playback control command using the second media player as claimed therein is not present in the invention of Groups I or III. The special technical feature of the Group III invention: a transceiver to establish connections to a network; means for receiving user input; processing circuitry to process incoming and outgoing communications and user input; the device transmitting a message according to a specified format over the network to a server system; the device is operable to control playing the content on the display device based on user selected commands transmitted to the server system from the device as claimed therein is not present in the invention of Groups I or II.

Groups I, II and III lack unity of invention because even though the inventions of these groups require the technical feature of a server system receiving signals from a personal computing device; information/signals specifying a video file to be acted upon, a media player for playing the video file and corresponding programming code to control playing the video file, this technical feature is not a special technical feature as it does not make a contribution over the prior art in view of US 2010/0027974 A1 (ANSARI) 04 February 2010 (04.02.2010) figures 2, 6; paragraphs 22-30.

Since none of the special technical features of the Group I, II or III inventions are found in more than one of the inventions, unity of invention is lacking.

4. Consequently, this opinion has been established in respect of the following parts of the international application:

   ☐ all parts

   ☒ the parts relating to claims Nos. 1-21, 27-38, 67

Form PCT/ISA/237 (Box No. IV) (July 2011)

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US2012/033314

Box No. V **Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement**

1. Statement

Novelty (N)	Claims	1-21, 27-38, 67	YES
	Claims	None	NO
Inventive step (IS)	Claims	None	YES
	Claims	1-21, 27-38, 67	NO
Industrial applicability (IA)	Claims	1-21, 27-38, 67	YES
	Claims	None	NO

2. Citations and explanations:

Claims 1-2, 5-7, 11-12, 17-18, 27, 31-33, 38, 67, lack an inventive step under PCT Article 33(3) as being obvious over Ansari in view of Abramson.

Regarding claim 1, Ansari discloses a machine-implemented method of controlling presentation of video content on a display device by a media player (media player control 126 comprising a software process that executes a media playback to enable users to play a digital media such as a video, para 0023; FIG 1), the method comprising: receiving in a server system one or more signals from a remote personal computing device (the system has the capability to move or copy an asset to any home, car, portable, computer, or other computing device, para 0031, 0033; FIG 1 [wherein figure 1 shows multiple remote personal computing devices interfaced with server 106]); one or more signals specifying a video file to be acted upon and identifying a media player for playing the video content (video server 154 containing a library of video assets such as movies and other video productions, para 0022; playback device 104 includes autos; personal computers; cell phones; PDA's; media player devices; and work stations, para 0019; FIG 1); storing, in a database associated with the server system, a message for transmission to or retrieval by the display device (downloading or streaming media assets stored locally on the portal (server) 106, the media player control 126 connects to media asset sources 102 through the server and downloads and/or streams media assets, para 0021; media player control 126 comprises a software process that executes a media playback software application program, para 0023; FIG 1), wherein the message specifies the video file to be acted upon (metadata file 140 provides specific presentation control information for use in controlling playback of the received media, para 0019; FIG 3), identifies the media player for playing the video content (playback device 104 includes autos; personal computers; cell phones; PDA's; media player devices; and work stations, para 0019; FIG 1) but lacks the teaching wherein the one or more signals further including a universal playback control command for controlling playing of the video content on the display device by the media player; converting, by the server system, the universal playback control command into corresponding programming code to control playing of the video content on the display device by the media player; wherein converting the universal playback control command includes selecting from among a plurality of specific commands; each of which represents a corresponding playback control command for a respective media player; and includes the corresponding programming code to control playing of the video content on the display device by the media player in accordance with the universal playback control command. Abramson is in the field using retrieval and storage files to display the interactive elements semi-transparently over the video contents (abstract) and teaches wherein the one or more signals further including a universal playback control command for controlling playing of the video content on the display device by the media player (additional commands may be provided by the player application object to control the video; play( ), stop( ), pause( ), para 0073 [wherein paragraph 0073 display a list of standard universal commands used for interpreting and conversion via a standard playback control command]); converting, by the server system, the universal playback control command into corresponding programming code to control playing of the video content on the display device by the media player (play a video, the channel can call an open function exposed by the player application; var player = external.mediaPlayer; var file = program.getContentFileByName ("video.wmv"); para 0071); wherein converting the universal playback control command includes selecting from among a plurality of specific commands, each of which represents a corresponding playback control command for a respective media player (play( ), stop( ), pause( ), para 0073 [wherein paragraph 0073 display a list of standard universal commands used for interpreting and conversion via a standard playback control command]), and includes the corresponding programming code to control playing of the video content on the display device by the media player in accordance with the universal playback control command (As the media player opens and plays a media selection, it can go through several "play states"; "buffering" or "waiting" play states tell the user that something is going on even if no video is playing, para 0078 [wherein the universal playback control are shown in the table of paragraph 0073]). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to include one or more signals further including a universal playback control command for controlling playing of the video content on the display device by the media player; converting, by the server system, the universal playback control command into corresponding programming code to control playing of the video content on the display device by the media player; convert the universal playback control command from among a plurality of specific commands; and includes the corresponding programming code to control playing of the video content on the display device by the media player in accordance with the universal playback control command in the invention of Ansaris as taught by Abramson. The motivation would have been to control the video (Abramson, para 0073).

Supplemental Box

In case the space in any of the preceding boxes is not sufficient.

Continuation of:

Regarding claim 2, Ansari lacks the teaching wherein the identity of the media player identified in the one or more signals from the personal computing device (the system has the capability to move or copy an asset from any home, car, portable, computer, or other computing device, para 0033; FIG 1), [wherein figure 1 shows multiple remote personal computing devices interfaced with server 106]; loading an appropriate set of protocols or application programming interfaces from a library based on the identity of the media player (media player object library 120 supporting a plurality of media player decoder modules 122 responsive to and interactive with the media player program logic 118, para 0016) but lacks the teaching wherein converting the command from the personal computing device into a corresponding JavaScript code to control the media player. Abramson is in the field using retrieval and storage files to display the interactive elements semi-transparently over the video contents (abstract) and teaches wherein converting the command from the personal computing device into a corresponding JavaScript code to control the media player (player application 32 and the download manager may be written in JAVA, para 0023). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to convert the command from the personal computing device into a corresponding JavaScript code to control the media player in the invention of Ansari as taught by Abramson. The motivation would have been to provide a permanently stored application on the hard-drive (Abramson, para 0023).

Regarding claim 5, Ansari lacks the teaching wherein the universal command represents an instruction to play the video content, to stop playing the video content or to pause playing the video content. Abramson is in the field using retrieval and storage files to display the interactive elements semi-transparently over the video contents (abstract) and teaches wherein the universal command represents an instruction to play the video content, to stop playing the video content or to pause playing the video content (additional commands may be provided by the player application object to control the video; play( ), stop( ), pause( ), para 0073), [wherein paragraph 0073 display a list of standard universal commands used for interpreting and conversion via a standard playback control command]. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to include an instruction to play the video content, to stop playing the video content or to pause playing the video content in the invention of Ansari as taught by Abramson. The motivation would have been to control the video (Abramson, para 0073).

Regarding claim 6, Ansari discloses wherein the video content is an interactive video game (the system may be audio such interactive software games, or any media, para 0026).

Regarding claim 7, Ansari discloses wherein the video content is streaming media (streaming media assets stored locally on the portal106, para 0021).

Supplemental Box

In case the space in any of the preceding boxes is not sufficient.

Continuation of:

Regarding claim 11, Ansaris discloses wherein a system for controlling playing of video content on a display device by a media player (media player control 126 comprising a software process that executes a media playback to enable users to play a digital media such as a video, para 0023; FIG 1); the system comprising: a server system (video server 154 containing a library of video assets such as movies and other video productions, para 0022); a first database storing a relationship between a personal computing device and the display device (database server 146 maintains the user's database of assets "on-line" and a user obtains access to it by connecting to theportal106; The database server 146 keeps user and media information which is used by the web server 142, para 0028; FIG 4), [wherein figure shows the database server 146 to be within the portal 106 which is linked to the personal computing devices 104 of figure 1]; and a second database (media library server 144, para 0020; FIG 4 [wherein figure 4 shows two databases 144 and 146), wherein the server system is operable to receive one or more signals from a remote personal computing device (the system has the capability to move or copy an asset from any home, car, portable, computer, or other computing device, para 0033; FIG 1); the one or more signals specifying *a video file to be acted upon and identifying a media player for playing the video content (metadata file 140 provides specific presentation* control information for use in controlling playback of the received media, para 0019; FIG 3); the server system being further operable to store in the second database a message for transmission to or retrieval by the display device (media library server 144 serves as a central repository, para 0025; FIG 4 [wherein figure 4 shows two databases 144 and 146), wherein the message specifies the video file to be acted upon, identifies the media player for playing the video content (plurality of metadata files 140; each metadata file 140 provides specific presentation control information for use in controlling playback of the received media, para 0019; FIG 2 [wherein figure 2 shows the metadata linked via communication network 108 to the computing device 104), but lacks the teaching wherein the one or more signals further including a universal playback control command for controlling playing of the video content on the display device; one or more computer-readable media storing instructions that when executed by the server system, cause the server system to perform operations including converting the universal playback control command into corresponding programming code to control playing of the video content by the media player; wherein converting the universal playback control command includes selecting from among a plurality of specific commands, each of which represents a corresponding playback control command for a respective media player; and includes the corresponding programming code to control playing of the video content on the display device by the media player in accordance with the universal playback control command. Abramson is in the field using retrieval and storage files to display the interactive elements semi-transperently over the video contents (abstract) and teaches wherein the one or more signals further including a universal playback control command for controlling playing of the video content on the display device (additional commands may be provided by the player application object to control the video; play( ), stop( ), pause( ), para 0073 [wherein paragraph 0073 display a list of standard universal commands used for interpreting and conversion via a standard playback control command); one or more computer-readable media storing instructions that when executed by the server system, cause the server system to perform operations including converting the universal playback control command into corresponding programming code to control playing of the video content by the media player (play a video, the channel can call an open function exposed by the player application; var player = external.mediaPlayer; var file = program.getContentFileByName ("video.wmv"); para 0071); wherein converting the universal playback control command includes selecting from among a plurality of specific commands, each of which represents a corresponding playback control command for a respective media player (commands provided by the player application object to control the video, para 0073 [wherein the universal playback control are shown in the table of paragraph 0073); and includes the corresponding programming code to control playing of the video content on the display device by the media player in accordance with the universal playback control command (As the media player opens and plays a media selection, it can go through several "play states"; "buffering" or "waiting" play states tell the user that something is going on even if no video is playing, para 0078 [wherein the universal playback control are shown in the table of paragraph 0073). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to include one or more signals further including a universal playback control command for controlling playing of the video content on the display device by the media player; converting, by the server system, the universal playback control command into corresponding programming code to control playing of the video content on the display device by the media player; convert the universal playback control command from among a plurality of specific commands; and includes the corresponding programming code to control playing of the video content on the display device by the media player in accordance with the universal playback control command in the invention of Ansaris as taught by Abramson. The motivation would have been to control the video (Abramson, para 0073).

WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US2012/033314

Supplemental Box

In case the space in any of the preceding boxes is not sufficient.
Continuation of:

Regarding claim 12, Ansaris discloses wherein an application programming interfaces (processor 110 programmed with media request software 112, a network interface device 114 communicating information between the processor 110, para 0016; FIG 2); wherein the server system is operable to check the identity of the media player identified in the one or more signals from the personal computing device (player program logic 118, to integrate the selected media player decoder 122 with the media player control126 for use by the user, para 0018; FIG 1); load an application programming interfaces from the library based on the identity of the media player (library 120 supporting a plurality of media player decoder modules 122 responsive to and interactive with the media player program logic 118, para 0016; application in media player control of the user so that a user can access any licensed media asset from any of the user's media players, para 0028; FIG 2) but lacks the teaching wherein the media application convert the command from the personal computing device into a corresponding programming code to control the media player. Abramson is in the field using retrieval and storage files to display the interactive elements semi-transparently over the video contents (abstract) and teaches wherein the media application convert the command from the personal computing device into a corresponding programming code to control the media player (additional commands may be provided by the player application object to control the video; play( ), stop( ), pause( ), para 0073). [wherein paragraph 0073 display a list of standard universal commands used for interpreting and conversion via a standard playback control command]. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to include a media application to convert the command from the personal computing device into a corresponding programming code to control the media player in the invention of Ansari as taught by Abramson. The motivation would have been to control the video (Abramson, para 0073).

Regarding claim 17, Ansaris discloses wherein the video content is an interactive video game (The digital media assets distributed by the system may be interactive software games, para 0026).

Regarding claim 18, Ansaris discloses wherein the video content is streaming media (streaming media assets stored locally on the portal106, para 0021).

Regarding claim 27, Ansaris discloses wherein a server system for controlling presentation of content on a display device (The portal 106 is a computer server or group of servers that functions to allow for the storage, stream and download of media assets to a media player control126, para 0024; FIG 1); the server system comprising one or more servers (group of servers that functions to allow for the storage, para 0024); the server system storing a relationship between a personal computing device and a display device (The portal 106 may be accessible directly from a media player control and through one or more web sites and may provide a customizable interface or view to each user, para 0025; FIG 1); wherein the server system is operable, in response to receiving from the personal computing device a message including a command for controlling the playing of the specified content (media player program logic 118 analyzes the received media to determine the format received, and then automatically selects a media player decoder module 122 from the plurality of media player, para 0017; FIG 2 [wherein figure 2 show the media module linked to the server system via the communication network 108); and further identifying a media player for playing the specified content, to convert the command into a corresponding command recognizable by the media player if the command received from the personal computing device is not recognizable by the media player (client media player device has a stored protection key that is capable of decrypting and executing the object that has been downloaded. Each client media player device key is unique, but will have some level of identity with the other client media player devices used by the user's family of devices, para 0033) but lacks the teaching wherein providing a further message to the display device, wherein the further message includes the corresponding command and identifies the specified content and the media player. Abramson is in the field using retrieval and storage files to display the interactive elements semi-transparently over the video contents (abstract) and teeches wherein a message to the display device, wherein the message includes the corresponding command and identifies the specified content and the media player (to play a video the channel can call an open function exposed by the player application object, passing in the local filename of the video to be played, para 0071). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to include a message to the display device, wherein the message includes the corresponding command and identifies the specified content and the media player in the invention of Ansaris as taught by Abramson. The motivation would have been to provide commands to the player to control the video (Abramson, para 0073).

Regarding claim 31, Ansaris discloses wherein the server system operable to convert a command from the personal computing device into corresponding programming code used by the display device to control the media player (client media player device has a stored protection key that is capable of decrypting and executing the object that has been downloaded. Each client media player device key is unique, but will have some level of identity with the other client media player devices used by the user's family of devices, para 0033).

Regarding claim 32, Ansaris lacks the teaching wherein the command from the personal computing device specifies one of the following actions to be performed with respect to playing of the content by the display device: pause, stop, rewind or fast forward. Abramson is in the field using retrieval and storage files to display the interactive elements semi-transparently over the video contents (abstract) and teaches wherein the universal command represents an instruction to play the video content, to stop playing the video content or to pause playing the video content (additional commands may be provided by the player application object to control the video; pause( ), stop(), rewind() para 0073). [wherein paragraph 0073 display a list of standard universal commands used for interpreting and conversion via a standard playback control command]. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to include a universal command representing an instruction to play the video content, to stop playing the video content or to pause playing the video content in the invention of Ansari as taught by Abramson. The motivation would have been to control the video (Abramson, para 0073).

Supplemental Box

In case the space in any of the preceding boxes is not sufficient.
Continuation of:

Regarding claim 33, Ansaris discloses wherein the server system operable to receive another message from the personal computing device (the system has the capability to move or copy an asset from any home, car, portable, computer, or other computing device, para 0033; FIG 1), [wherein figure 1 shows multiple remote personal computing devices interfaced with server 106]; wherein the other message includes a command to control the playing of the specified content on the display device (media player program logic 118 analyzes the received media to determine the format received, and then automatically selects a media player decoder module 122 from the plurality of media player, para 0017; FIG 2), [wherein figure 2 show the media module linked to the server system via the communication network 108]; Abramson is in the field using retrieval and storage files to display the interactive elements semi-transparently over the video contents (abstract) and teaches wherein in response to receiving the other message, the server system converts the command in the other message into a second corresponding command recognizable by the media player (additional commands may be provided by the player application object to control the video; play( ), stop( ), pause(), para 0073), [wherein paragraph 0073 display a list of standard universal commands used for interpreting and conversion via a standard playback control command]; and provides an additional message to the display device (As the media player opens and plays a media selection, it can go through several "play states"; "buffering" or "waiting" play states tell the user that something is going on even if no video is playing, para 0078), [wherein the universal playback control are shown in the table of paragraph 0073]; wherein the additional message includes the second corresponding command (play( ), stop( ), pause(), para 0073), [wherein paragraph 0073 display a list of standard universal commands used for interpreting and conversion via a standard playback control command]). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to include a server system which converts the command in the other message into a second corresponding command recognizable by the media player in the invention of Ansaris as taught by Abramson. The motivation would have been to control the video (Abramson, para 0073).

Regarding claim 38, Ansaris discloses wherein the server system operable to receive the message from the personal computing device over the internet and operable to provide the further message to the display device over the internet (The portal 106 connects to the media asset sources 102 by any suitable means, such as the Internet, para 0021), [wherein figure 1 shows two way communication via the computing devices and server through the communication network 108].

Regarding claim 67, Ansaris discloses wherein an automated method of controlling presentation of content on a display device (automatically selects a media player decoder module from the plurality of media player decoder modules for playback of the received media, para 0003; FIG 2 [wherein figure 2 show the media module linked to the server system via the communication network 108), the method comprising: receiving a message from a personal computing device (the system has the capability to move or copy an asset from any home, car, portable, computer, or other computing device, para 0033; FIG 1 [wherein figure 1 shows multiple remote personal computing devices interfaced with server 106), the message including a command for controlling the presentation of specified content (media player program logic 118 analyzes the received media to determine the format received, and then automatically selects a media player decoder module 122 from the plurality of media player, para 0017; FIG 2 [wherein figure 2 show the media module linked to the server system via the communication network 106); identifying a media player for playing the specified content, in response to receiving the message (Once the media has been received the method continues with analyzing which format is presented, and automatically selecting a media player for playback of the received media, para 0005; FIG 2); converting the command into a corresponding command recognizable by the media player (client media player device has a stored protection key that is capable of decrypting and executing the object that has been downloaded. Each client media player device key is unique, but will have some level of identity with the other client media player devices used by the user's family of devices, para 0033), but lacks the teaching wherein providing a further message to the display device; wherein the further message includes the corresponding command and identifies the specified content and the media player. Abramson is in the field using retrieval and storage files to display the interactive elements semi-transparently over the video contents (abstract) and teaches wherein providing a further message to the display device, wherein the further message includes the corresponding command and identifies the specified content and the media player (to play a video the channel can call an open function exposed by the player application object, passing in the local filename of the video to be played, para 0071). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to include a message to the display device, wherein the message includes the corresponding command and identifies the specified content and the media player in the invention of Ansaris as taught by Abramson. The motivation would have been to provide commands to the player to control the video (Abramson, para 0073).

Claims 3-4, 13-16, 19-20, 28-30, 34-36, lack an inventive step under PCT Article 33(3) as being obvious over Ansari in view of Abramson and further in view of Boswell et al., hereinafter referred to as Boswell.

Regarding claim 3, Ansari lacks the teaching wherein converting the command into corresponding programming code to control the media player includes using information in a look-up table. Boswell is in the field using method to protect against unauthorized playback or copying of video (abstract) and teaches wherein converting the command into corresponding programming code to control the media player includes using information in a look-up table (The DVD encryption and extraction module 18 or conversion module 19, can be pre-programmed to make a decision as to what cropping and/or stretching is required on the basis of a look-up table, para 0064). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to convert the command into corresponding programming code to control the media player includes using information in a look-up table in the invention of Ansari as taught by Boswell. The motivation would have been to relate the course aspect ratios to target device (Boswell, para 0064).

Supplemental Box

In case the space in any of the preceding boxes is not sufficient.

Continuation of:

Regarding claim 4, Ansari does not explicitly state in regards to the embodiment of figure 1 wherein the table stores a plurality of specific commands, each of which represents, respectively, a corresponding command for a different media player. However, Ansari teaches a plurality of media modules and player commanded by a media library (table) server (library 120 supporting a plurality of media player decoder modules 122 responsive to and interactive with the media player program logic 118, para 0016; library supporting a plurality of media player decoder modules responsive to and interactive with the media player program logic, para 0035; FIG 4). It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate the teachings of this embodiment in the invention of Ansari for the purpose of automatically selecting a media player decoder module 122 from the plurality of media player decoder modules for playback of the received media (Ansari, para 0017).

Regarding claim 13, Ansari does not explicitly state in regards to the embodiment of figure 1 wherein the table stores a plurality of specific commands, each of which represents, respectively, a corresponding command for a different media player. However, Ansari teaches a plurality of media modules and player commanded by a media library (table) server (library 120 supporting a plurality of media player decoder modules 122 responsive to and interactive with the media player program logic 118, para 0016; library supporting a plurality of media player decoder modules responsive to and interactive with the media player program logic, para 0035; FIG 4). It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate the teachings of this embodiment in the invention of Ansari for the purpose of automatically selecting a media player decoder module 122 from the plurality of media player decoder modules for playback of the received media (Ansari, para 0017) but lacks the teaching wherein the server system is operable to convert the command into corresponding programming code to control the media player based on information in the look-up table. Boswell is in the field using method to protect against unauthorized playback or copying of video (abstract) and teaches wherein the server system is operable to convert the command into corresponding programming code to control the media player based on information in the look-up table (server 100 identifies a product code for the requested track at step S5. This can occur in any suitable way, for example using a look-up table, para 0250). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to include a server system operable to convert the command into corresponding programming code to control the media player based on information in the look-up table in the invention of Ansari as taught by Boswell. The motivation would have been to uniquely identifies the requested track (Boswell, para 0250).

Regarding claim 14, Ansaris lacks the teaching wherein the look-up table stores a correspondence between the universal command and specific commands. Boswell is in the field using method to protect against unauthorized playback or copying of video (abstract) and teaches wherein the look-up table stores a correspondence between the universal command (server 100 identifies a product code for the requested track at step S5. This can occur in any suitable way, for example using a look-up table, para 0250). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to include a look-up table storing a correspondence between the universal commands in the invention of Ansari as taught by Boswell. The motivation would have been to uniquely identifies the requested track (Boswell, para 0250).

Regarding claim 15, Ansaris lacks the teaching wherein the server system is operable to convert the universal command by selecting from among the plurality of specific commands stored in the lookup table. Boswell is in the field using method to protect against unauthorized playback or copying of video (abstract) and teaches wherein the server system is operable to convert the universal command by selecting from among the plurality of specific commands stored in the lookup table (The DVD encryption and extraction module 18 or conversion module 19, can be pre-programmed to make a decision as to what cropping and/or stretching is required on the basis of a look-up table, para 0064). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to include a the server system operable to convert the universal command by selecting from among the plurality of specific commands stored in the lookup table in the invention of Ansari as taught by Boswell. . The motivation would have been to relate the course aspect ratios to target device (Boswell, para 0064).

Regarding claim 16, Ansaris lacks the teaching wherein the universal command represents an instruction to play the video content, to stop playing the video content or to pause playing the video content. Abramson is in the field using retrieval and storage files to display the interactive elements semi-transparently over the video contents (abstract) and teaches wherein the universal command represents an instruction to play the video content, to stop playing the video content or to pause playing the video content (additional commands may be provided by the player application object to control the video; play( ), stop( ), pause( ), para 0073), [wherein paragraph 0073 display a list of standard universal commands used for interpreting and conversion via a standard playback control command]. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to include a universal command representing an instruction to play the video content, to stop playing the video content or to pause playing the video content in the invention of Ansari as taught by Abramson. The motivation would have been to control the video (Abramson, para 0073).

Supplemental Box

In case the space in any of the preceding boxes is not sufficient.

Continuation of:

Regarding claim 19, Ansaris lacks the teaching wherein the server system is operable to receive a code from the personal computing device; wherein the code is uniquely associated with the display device on which the video content is to be played; the server system further being operable to store the record establishing a connection between the personal computing device and the display device based on the code. Boswell is in the field using method to protect against unauthorized playback or copying of video (abstract) and teaches wherein the server system is operable to receive a code from the personal computing device (The DVD encryption and extraction module 18 or conversion module 19, can be pre-programmed to make a decision as to what cropping and/or stretching is required on the basis of a look-up table, para 0064); wherein the code is uniquely associated with the display device on which the video content is to be played (step S4, the broadcast server 100 identifies a product code for the requested track at step S5; product code uniquely identifies the requested track, para 0250), [wherein this code allow client access to media data file]; the server system further being operable to store the record establishing a connection between the personal computing device and the display device (access code then is stored in a billing/DRM configuration store 130, para 0170; the media player 120 includes a menu option for registering for television and/or radio services, para 0245). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to include unique code associated with the display device on which the video content is to be played in the invention of Ansari as taught by Boswell. The motivation would have been to send access code from the billing module to the billing verification module (Boswell, para 0170).

Regarding claim 20, Ansari lacks the teaching wherein the code is different from an IP address associated with the display device and is different from a MAC address associated with the display device. Abramson is in the field using retrieval and storage files to display the interactive elements semi-transparently over the video contents (abstract) and teaches wherein the code is different from an IP address associated with the display device and is different from a MAC address associated with the display device (player application 32 and the download manager may be written in JAVA, para 0023). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to in the invention to include a code which is different from an IP address associated with the display device and is different from a MAC address associated with the display device in the invention of Ansari as taught by Abramson. The motivation would have been to provide a permanently stored application on the hard-drive (Abramson, para 0023). The motivation would have been to control the video (Abramson, para 0073).

Regarding claim 28, Ansaris lacks the teaching wherein the server system includes a look-up table to store the relationship between the personal computing device and the display device; server system including a look-up table to store the relationship between the personal computing device and the display device. Boswell is in the field using method to protect against unauthorized playback or copying of video (abstract) and teaches wherein server system including a look-up table to store the relationship between the personal computing device and the display device (server 100 identifies a product code for the requested track at step S5. This can occur in any suitable way, for example using a look-up table, para 0250); server system including a look-up table to store the relationship between the personal computing device and the display device (The DVD encryption and extraction module 18 or conversion module 19, can be pre-programmed to make a decision as to what cropping and/or stretching is required on the basis of a look-up table, para 0064). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to include a server system having a look-up table to store the relationship between the personal computing device and the display device in the invention of Ansari as taught by Boswell. The motivation would have been to send access code from the billing module to the billing verification module (Boswell, para 0170).

Regarding claim 29, Ansaris lacks the teaching wherein the server system including a look-up table storing a listing of commands that can be received in messages from the personal computing device; and a listing of corresponding commands recognizable by the media player. Boswell is in the field using method to protect against unauthorized playback or copying of video (abstract) and teaches wherein the server system including a look-up table storing a listing of commands that can be received in messages from the personal computing device (The DVD encryption and extraction module 18 or conversion module 19, can be pre-programmed to make a decision as to what cropping and/or stretching is required on the basis of a look-up table, para 0064); and a listing of corresponding commands recognizable by the media player (step S4, the broadcast server 100 identifies a product code for the requested track at step S5; product code uniquely identifies the requested track, para 0250), [wherein this code allow client access to media data file]. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to store a listing of commands that can be received in messages from the personal computing device in the invention of Ansari as taught by Boswell. The motivation would have been to send access code from the billing module to the billing verification module (Boswell, para 0170).

WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US2012/033314

Supplemental Box

In case the space in any of the preceding boxes is not sufficient.
Continuation of:

Regarding claim 30, Ansaris lacks the teaching wherein the server system including a look-up table storing a listing of commands that can be received in messages from the personal computing device; and a listing of corresponding commands each of which is recognizable by at least one of a plurality of media players. Boswell is in the field using method to protect against unauthorized playback or copying of video (abstract) and teaches wherein the server system including a look-up table storing a listing of commands that can be received in messages from the personal computing device (The DVD encryption and extraction module 18 or conversion module 19, can be pre-programmed to make a decision as to what cropping and/or stretching is required on the basis of a look-up table, para 0064); and a listing of corresponding commands each of which is recognizable by at least one of a plurality of media players (server 100 identifies a product code for the requested track at step S5. This can occur in any suitable way, for example using a look-up table, para 0250), [wherein the server interface with the media player]. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to include a server system including a look-up table storing a listing of commands that can be received in messages from the personal computing device in the invention of Ansari as taught by Boswell. The motivation would have been to send access code from the billing module to the billing verification module (Boswell, para 0170).

Regarding claim 34, Ansari lacks the teaching wherein the server system includes a synchronization code uniquely associated with the display device; wherein the message from the personal computing device includes code; and wherein in response to receiving the message from personal computing device, the server system uses the synchronization code and the look-up table to identify the display device that is to receive the further message including the corresponding command. Boswell is in the field using method to protect against unauthorized playback or copying of video (abstract) and teaches wherein the server system includes a synchronization code uniquely associated with the display device (media code displayed by the media player 58. The media code is 11 bytes (i.e. 11 alphanumeric characters) long, para 0088), [wherein the characters represent a synchronization code]; wherein the message from the personal computing device includes code (media identification code, which identifies the corresponding media item, and the serial number of the media player 58, para 0088); and wherein in response to receiving the message from personal computing device, the server system uses the code and the look-up table to identify the display device that is to receive the further message including the corresponding command (The DVD encryption and extraction module 18 or conversion module 19, can be pre-programmed to make a decision as to what cropping and/or stretching is required on the basis of a look-up table, para 0064). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to in the invention to include a server system with a synchronization code uniquely associated with the display device in the invention of Ansari as taught by Boswell. The motivation would have been to send access code from the billing module to the billing verification module (Boswell, para 0170).

Regarding claim 35, Ansari lacks the teaching wherein the synchronization code is different from an IP address associated with the display device. Abramson is in the field using retrieval and storage files to display the interactive elements semi-transparently over the video contents (abstract) and teaches wherein the synchronization code is different from an IP address associated with the display device (player application 32 and the download manager may be written in JAVA, para 0023). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to in the invention to include a code which is different from an IP address associated with the display device in the invention of Ansari as taught by Abramson. The motivation would have been to provide a permanently stored application on the hard-drive (Abramson, para 0023). The motivation would have been to control the video (Abramson, para 0073).

Regarding claim 36, Ansaris discloses wherein the synchronization code is different from a MAC address associated with the display device (portal106 allows for synchronization and replication of a user's licensed assets with each of the user's media player control 126, para 0024), [wherein figure 1 shows a plurality of computing devices including a PC and MAC which would indicate different relative to the coding].

Claims 8-10 lack an inventive step under PCT Article 33(3) as being obvious over Ansari in view of Abramson and furthure in view of Arumugam.

Regarding claim 8, Ansari lacks the teaching wherein receiving, in the server system, a code from the personal computing device; wherein the code is uniquely associated with the display device on which the video content is to be played; and storing in the server system a record establishing a connection between the personal computing device and the display device based on the code. Arumugam is in the field using in-process payer authorization systems for e-commerce purchases (abstract) and teaches wherein receiving, in the server system, a code from the personal computing device (transaction request includes an indication that the consumer intends to use in-process payer authorization; transaction processor generates a random code and sends the code to a communication device (e.g., cell phone, PDA, personal computer), para 0036; FIG 2), [wherein in-process authorization indicate a connection to the server]; wherein the code is uniquely associated with the display device on which the video content is to be played (transaction processor generates a random code and sends the code to a communication device, para 0036; FIG 2); and storing in the server system a record establishing a connection between the personal computing device and the display device based on the code (program code or code segments to perform the necessary tasks may be stored in a machine readable medium such as storage medium, para 0018). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to in the invention to include receive in the server system, a code from the personal computing device; wherein the code is uniquely associated with the display device on which the video content is to be played in the invention of Ansari as taught by Arumugam. The motivation would have been to match the random code to allow the transaction (Arumugam, para 0037).

Supplemental Box

In case the space in any of the preceding boxes is not sufficient.
Continuation of:

Regarding claim 9, Ansari lacks the teaching wherein the code is different from an IP address associated with the display device and is different from a MAC address associated with the display device. Abramson is in the field using retrieval and storage files to display the interactive elements semi-transparently over the video contents (abstract) and teaches wherein the code is different from an IP address associated with the display device and is different from a MAC address associated with the display device (player application 32 and the download manager may be written in JAVA, para 0023). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to in the invention to include a code which is different from an IP address associated with the display device and is different from a MAC address associated with the display device in the invention of Ansari as taught by Abramson. The motivation would have been to provide a permanently stored application on the hard-drive (Abramson, para 0023). The motivation would have been to control the video (Abramson, para 0073).

Regarding claim 10, Ansari lacks the teaching wherein assigning a randomly generated code to the display device each time the display device connects to the server system. Arumugam is in the field using in-process payer authorization systems for e-commerce purchases (abstract) and teaches wherein assigning a randomly generated code to the display device each time the display device connects to the server system (transaction request includes an indication that the consumer intends to use in-process payer authorization; transaction processor generates a random code and sends the code to a communication device (e.g., cell phone, PDA, personal computer), para 0036; FIG 2 [wherein in-process authorization indicate a connection to the server]). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to assign a randomly generated code to the display device each time the display device connects to the server system in the invention of Ansari as taught by Arumugam. The motivation would have been to match the random code to allow the transaction (Arumugam, para 0037).

Claims 21, 37 lack an inventive step under PCT Article 33(3) as being obvious over Ansari in view of Abramson and Boswell, and further in view of Arumugam.

Regarding claim 21, Ansari lacks the teaching wherein assigning a randomly generated code to the display device each time the display device connects to the server system. Arumugam is in the field using in-process payer authorization systems for e-commerce purchases (abstract) and teaches wherein assigning a randomly generated code to the display device each time the display device connects to the server system (transaction request includes an indication that the consumer intends to use in-process payer authorization; transaction processor generates a random code and sends the code to a communication device (e.g., cell phone, PDA, personal computer), para 0036; FIG 2 [wherein in-process authorization indicate a connection to the server]). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to assign a randomly generated code to the display device each time the display device connects to the server system in the invention of Ansari as taught by Arumugam. The motivation would have been to match the random code to allow the transaction (Arumugam, para 0037).

Regarding claim 37, Ansari lacks the teaching wherein the server system operable to assign a randomly generated synchronization code to the display device each time the display device connects to the server system. Arumugam is in the field using in-process payer authorization systems for e-commerce purchases (abstract) and teaches wherein the server system operable to assign a randomly generated synchronization code to the display device each time the display device connects to the server system (transaction request includes an indication that the consumer intends to use in-process payer authorization; transaction processor generates a random code and sends the code to a communication device (e.g., cell phone, PDA, personal computer), para 0036; FIG 2 [wherein in-process authorization indicate a connection to the server]). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to assign a randomly generated code to the display device each time the display device connects to the server system in the invention of Ansari as taught by Arumugam. The motivation would have been to match the random code to allow the transaction (Arumugam, para 0037).

Claims 1-21, 27-36, 67 meet the criteria set out in PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in industry.

FISH & RICHARDSON P.C. (NY)
P.O. BOX 1022
MINNEAPOLIS, MN 55440-1022

EXAMINER
HEFFINGTON, JOHN M

ART UNIT	PAPER NUMBER
2172	

DATE MAILED: 10/10/2012

APPLICATION NO.	FILING DATE	FIRST NAMED INVENTOR	ATTORNEY DOCKET NO.	CONFIRMATION NO.
13/245,001	09/26/2011	David Strober	30160-0002002	4575

TITLE OF INVENTION: PLAY CONTROL OF CONTENT ON A DISPLAY DEVICE

APPLN. TYPE	SMALL ENTITY	ISSUE FEE DUE	PUBLICATION FEE DUE	PREV. PAID ISSUE FEE	TOTAL FEE(S) DUE	DATE DUE
nonprovisional	YES	$15	$0	$870	$15	01/10/2013

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

PTOL-85 (Rev. 02/11)

PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: Mail **Mail Stop ISSUE FEE**
Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450
or Fax (571)-273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

26211 7590 10/10/2012
FISH & RICHARDSON P.C. (NY)
P.O. BOX 1022
MINNEAPOLIS, MN 55440-1022

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

Certificate of Mailing or Transmission

I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO (571) 273-2885, on the date indicated below.

1. Change of correspondence address or indication of "Fee Address" (37 CFR 1.363).

☐ Change of correspondence address (or Change of Correspondence Address form PTO/SB/122) attached.

☐ "Fee Address" indication (or "Fee Address" Indication form PTO/SB/47; Rev 03-02 or more recent) attached. **Use of a Customer Number is required.**

2. For printing on the patent front page, list

(1) the names of up to 3 registered patent attorneys or agents OR, alternatively,

(2) the name of a single firm (having as a member a registered attorney or agent) and the names of up to 2 registered patent attorneys or agents. If no name is listed, no name will be printed.

1 _____
2 _____
3 _____

3. ASSIGNEE NAME AND RESIDENCE DATA TO BE PRINTED ON THE PATENT (print or type)

PLEASE NOTE: Unless an assignee is identified below, no assignee data will appear on the patent. If an assignee is identified below, the document has been filed for recordation as set forth in 37 CFR 3.11. Completion of this form is NOT a substitute for filing an assignment.

(A) NAME OF ASSIGNEE (B) RESIDENCE: (CITY and STATE OR COUNTRY)

Please check the appropriate assignee category or categories (will not be printed on the patent) : ☐ Individual ☐ Corporation or other private group entity ☐ Government

4a. The following fee(s) are submitted:

☐ Issue Fee
☐ Publication Fee (No small entity discount permitted)
☐ Advance Order - # of Copies _____

4b. Payment of Fee(s): **(Please first reapply any previously paid issue fee shown above)**

☐ A check is enclosed.
☐ Payment by credit card. Form PTO-2038 is attached.
☐ The Director is hereby authorized to charge the required fee(s), any deficiency, or credit any overpayment, to Deposit Account Number _____ (enclose an extra copy of this form).

5. **Change in Entity Status** (from status indicated above)

☐ a. Applicant claims SMALL ENTITY status. See 37 CFR 1.27. ☐ b. Applicant is no longer claiming SMALL ENTITY status. See 37 CFR 1.27(g)(2).

NOTE: The Issue Fee and Publication Fee (if required) will not be accepted from anyone other than the applicant; a registered attorney or agent; or the assignee or other party in interest as shown by the records of the United States Patent and Trademark Office.

Authorized Signature _____ Date _____

Typed or printed name _____ Registration No. _____

This collection of information is required by 37 CFR 1.311. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, Virginia 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 4 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 4 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Notice of Allowability	Application No.	Applicant(s)	
	13/245,001	STROBER, DAVID	
	Examiner	Art Unit	
	JOHN HEFFINGTON	2172	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--

All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. **THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS.** This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

1. ☒ This communication is responsive to *the Request for Continued Examination filed 13 September 2012*.

2. ☐ An election was made by the applicant in response to a restriction requirement set forth during the interview on _____; the restriction requirement and election have been incorporated into this action.

3. ☐ The allowed claim(s) is/are *1-4 and 6-27*.

4. ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
   a) ☐ All b) ☐ Some* c) ☐ None of the:
      1. ☐ Certified copies of the priority documents have been received.
      2. ☐ Certified copies of the priority documents have been received in Application No. _____ .
      3. ☐ Copies of the certified copies of the priority documents have been received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

   * Certified copies not received: _____.

Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application.
THIS THREE-MONTH PERIOD IS NOT EXTENDABLE.

5. ☐ A SUBSTITUTE OATH OR DECLARATION must be submitted. Note the attached EXAMINER'S AMENDMENT or NOTICE OF INFORMAL PATENT APPLICATION (PTO-152) which gives reason(s) why the oath or declaration is deficient.

6. ☐ CORRECTED DRAWINGS (as "replacement sheets") must be submitted.
   (a) ☐ including changes required by the Notice of Draftsperson's Patent Drawing Review (PTO-948) attached
      1) ☐ hereto or 2) ☐ to Paper No./Mail Date _____.
   (b) ☐ including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No./Mail Date _____.

   Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the front (not the back) of each sheet. Replacement sheet(s) should be labeled as such in the header according to 37 CFR 1.121(d).

7. ☐ DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.

Attachment(s)

1. ☐ Notice of References Cited (PTO-892)
2. ☐ Notice of Draftperson's Patent Drawing Review (PTO-948)
3. ☒ Information Disclosure Statements (PTO/SB/08), Paper No./Mail Date 9/13/12
4. ☐ Examiner's Comment Regarding Requirement for Deposit of Biological Material
5. ☐ Notice of Informal Patent Application
6. ☐ Interview Summary (PTO-413), Paper No./Mail Date _____ .
7. ☐ Examiner's Amendment/Comment
8. ☐ Examiner's Statement of Reasons for Allowance
9. ☒ Other *Response to 312 amendment, printer rush*.

PART B – FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: Mail **Mail Stop ISSUE FEE**
Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450
or Fax (571) 273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 4 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Legibly mark-up with any corrections or use Block 1)

26211 7590 10/10/12

FISH & RICHARDSON P.C.
P.O. Box 1022
Minneapolis, MN 55440-1022

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

Certificate of Mailing or Transmission
I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO, on the date indicated below.

1. Change of correspondence address or indication of "Fee Address" (37 CFR 1.363).

[ ] Change of correspondence address (or Change of Correspondence Address form PTO/SB/122) attached.

[ ] "Fee Address" indication (or "Fee Address" Indication form PTO/SB/47; Rev 03-02 or more recent) attached. **Use of a Customer Number is required.**

2. For printing on the patent front page, list (1) the names of up to 3 registered patent attorneys or agents OR, alternatively, (2) the name of a single firm (having as a member a registered attorney or agent) and the names of up to 2 registered patent attorneys or agents. If no name is listed, no name will be printed.

1. **Fish & Richardson P.C.**
2.
3.

3. ASSIGNEE NAME AND RESIDENCE DATA TO BE PRINTED ON THE PATENT (print or type)

PLEASE NOTE: Unless an assignee is identified below, no assignee data will appear on the patent. Inclusion of assignee data is only appropriate when an assignment has been previously submitted to the USPTO or is being submitted under separate cover. Completion of this form is NOT a substitute for filing an assignment.

(A) NAME OF ASSIGNEE (B) RESIDENCE (CITY and STATE OR COUNTRY)

Touchstream Technologies, Inc. **Valhalla, NY**

Please check the appropriate assignee category or categories (will not be printed on the patent): [ ] individual [X] corporation or other private group entity [ ] government

4a. The following fee(s) are enclosed:
[X] Issue Fee
[ ] Publication Fee (No small entity discount permitted)
[ ] Advance Order - # of Copies .....

4b. Payment of Fee(s):
[ ] A check in the amount of the fee(s) is enclosed.
[ ] Payment by credit card. Form PTO-2038 is attached.
[X] The Director is hereby authorized to charge the required fee(s), or credit any overpayment, to Deposit Account Number 06-1050. (enclose an extra copy of this form)

5. **Change in Entity Status** (from status indicated above)

[ ] a. Applicant claims SMALL ENTITY status. See 37 CFR 1.27. [ ] b. Applicant is no longer claiming SMALL ENTITY status. See 37 CFR 1.27(g)(2).

The Director of the USPTO is requested to apply the Issue Fee and Publication Fee (if any) or to re-apply any previously paid issue fee to the application identified above.
NOTE: The issue Fee and Publication Fee (if required) will not be accepted from anyone other than the applicant, a registered agent or, or the assignee or other party in interest as shown by the records of the United States Patent and Trademark Office.

(Authorized Signature) /Samuel Borodach/ (Date) **October 12, 2012**

Typed or Printed Name **Samuel Borodach** Registration No. 38,388

This collection of information is required by 37 CFR 1.311. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, Virginia 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450.
Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111
If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371
If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office
If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

PART B – FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: Mail Mail Stop ISSUE FEE
Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450
or Fax (571) 273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 4 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Legibly mark-up with any corrections or use Block 1)

26211 7590 10/10/12

FISH & RICHARDSON P.C.
P.O. Box 1022210/15/2012 CCHAU2 00000001 061050 13245001
Minneapolis, MN 55440-1022 01 FC:2501 885.00 DA

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

Certificate of Mailing or Transmission
I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO, on the date indicated below.

TITLE OF INVENTION: PLAY CONTROL OF CONTENT ON A DISPLAY DEVICE

APPLN. TYPE	SMALL ENTITY	ISSUE FEE	PUBLICATION FEE	TOTAL FEE(S) DUE	DATE DUE
nonprovisional	YES	$15	$0	$15	01/10/2013

EXAMINER	ART UNIT	CLASS-SUBCLASS
HEFFINGTON, JOHN M.	2173	715-740000

1. Change of correspondence address or indication of "Fee Address" (37 CFR 1.363).
[ ] Change of correspondence address (or Change of Correspondence Address form PTO/SB/122) attached.
[ ] "Fee Address" indication (or "Fee Address" Indication form PTO/SB/47; Rev 03-02 or more recent) attached. Use of a Customer Number is required.

2. For printing on the patent front page, list (1) the names of up to 3 registered patent attorneys or agents OR, alternatively, (2) the name of a single firm (having as a member a registered attorney or agent) and the names of up to 2 registered patent attorneys or agents. If no name is listed, no name will be printed.
1. Fish & Richardson P.C.
2.
3.

3. ASSIGNEE NAME AND RESIDENCE DATA TO BE PRINTED ON THE PATENT (print or type)
PLEASE NOTE: Unless an assignee is identified below, no assignee data will appear on the patent. Inclusion of assignee data is only appropriate when an assignment has been previously submitted to the USPTO or is being submitted under separate cover. Completion of this form is NOT a substitute for filing an assignment.
(A) NAME OF ASSIGNEE (B) RESIDENCE (CITY and STATE OR COUNTRY)
Touchstream Technologies, Inc. Valhalla, NY

Please check the appropriate assignee category or categories (will not be printed on the patent): [ ] individual [X] corporation or other private group entity [ ] government

4a. The following fee(s) are enclosed:
[X] Issue Fee
[ ] Publication Fee (No small entity discount permitted)
[ ] Advance Order - # of Copies

4b. Payment of Fee(s):
[ ] A check in the amount of the fee(s) is enclosed.
[ ] Payment by credit card. Form PTO-2038 is attached.
[X] The Director is hereby authorized to charge the required fee(s), or credit any overpayment, to Deposit Account Number 06-1050 (enclose an extra copy of this form).

5. Change in Entity Status (from status indicated above)
[ ] a. Applicant claims SMALL ENTITY status. See 37 CFR 1.27. [ ] b. Applicant is no longer claiming SMALL ENTITY status. See 37 CFR 1.27(g)(2).

The Director of the USPTO is requested to apply the Issue Fee and Publication Fee (if any) or to re-apply any previously paid issue fee to the application identified above.
NOTE: The issue Fee and Publication Fee (if required) will not be accepted from anyone other than the applicant, a registered agent or, or the assignee or other party in interest as shown by the records of the United States Patent and Trademark Office.

(Authorized Signature) /Samuel Borodach/ (Date) October 12, 2012

Typed or Printed Name Samuel Borodach Registration No. 38,388

This collection of information is required by 37 CFR 1.311. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, Virginia 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450.
Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

PUBLICATION NOTICE

Title:PLAY CONTROL OF CONTENT ON A DISPLAY DEVICE

Publication No.US-2012-0272148-A1
Publication Date:10/25/2012

NOTICE OF PUBLICATION OF APPLICATION

The above-identified application will be electronically published as a patent application publication pursuant to 37 CFR 1.211, et seq. The patent application publication number and publication date are set forth above.

The publication may be accessed through the USPTO's publically available Searchable Databases via the Internet at www.uspto.gov. The direct link to access the publication is currently http://www.uspto.gov/patft/.

The publication process established by the Office does not provide for mailing a copy of the publication to applicant. A copy of the publication may be obtained from the Office upon payment of the appropriate fee set forth in 37 CFR 1.19(a)(1). Orders for copies of patent application publications are handled by the USPTO's Office of Public Records. The Office of Public Records can be reached by telephone at (703) 308-9726 or (800) 972-6382, by facsimile at (703) 305-8759, by mail addressed to the United States Patent and Trademark Office, Office of Public Records, Alexandria, VA 22313-1450 or via the Internet.

In addition, information on the status of the application, including the mailing date of Office actions and the dates of receipt of correspondence filed in the Office, may also be accessed via the Internet through the Patent Electronic Business Center at www.uspto.gov using the public side of the Patent Application Information and Retrieval (PAIR) system. The direct link to access this status information is currently http://pair.uspto.gov/. Prior to publication, such status information is confidential and may only be obtained by applicant using the private side of PAIR.

Further assistance in electronically accessing the publication, or about PAIR, is available by calling the Patent Electronic Business Center at 1-866-217-9197.

Office of Data Managment, Application Assistance Unit (571) 272-4000, or (571) 272-4200, or 1-888-786-0101

Subject: Private PAIR Correspondence Notification for Customer Number 26211

Oct 26, 2012 05:28:01 AM

Dear PAIR Customer:

FISH & RICHARDSON P.C. (NY)
P.O. BOX 1022
MINNEAPOLIS, MN 55440-1022
UNITED STATES

The following USPTO patent application(s) associated with your Customer Number, 26211 , have new outgoing correspondence. This correspondence is now available for viewing in Private PAIR.

The official date of notification of the outgoing correspondence will be indicated on the form PTOL-90 accompanying the correspondence.

Disclaimer:
The list of documents shown below is provided as a courtesy and is not part of the official file wrapper. The content of the images shown in PAIR is the official record.

Application	Document	Mailroom Date	Attorney Docket No.
13245001	NTC.PUB	10/25/2012	30160-0002002

To view your correspondence online or update your email addresses, please visit us anytime at https://sportal.uspto.gov/secure/myportal/privatepair.

If you have any questions, please email the Electronic Business Center (EBC) at EBC@uspto.gov with 'e-Office Action' on the subject line or call 1-866-217-9197 during the following hours:

Monday - Friday 6:00 a.m. to 12:00 a.m.

Thank you for prompt attention to this notice,

ISSUE NOTIFICATION

The projected patent number and issue date are specified above.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(application filed on or after May 29, 2000)

The Patent Term Adjustment is 4 day(s). Any patent to issue from the above-identified application will include an indication of the adjustment on the front page.

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Application Assistance Unit (AAU) of the Office of Data Management (ODM) at (571)-272-4200.

APPLICANT(s) (Please see PAIR WEB site http://pair.uspto.gov for additional applicants):

David Strober, Rye, NY;

The United States represents the largest, most dynamic marketplace in the world and is an unparalleled location for business investment, innovation, and commercialization of new technologies. The USA offers tremendous resources and advantages for those who invest and manufacture goods here. Through SelectUSA, our nation works to encourage and facilitate business investment. To learn more about why the USA is the best country in the world to develop technology, manufacture products, and grow your business, visit SelectUSA.gov.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111
If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371
If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office
If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

STATEMENT UNDER 37 CFR 3.73(b)

Applicant/Patent Owner: TOUCHSTREAM TECHNOLOGIES, INC.

Application No./Patent No.: 8,356,251 Filed/Issue Date: 01-15-2013

Titled: PLAY CONTROL OF CONTENT ON A DISPLAY DEVICE

TOUCHSTREAM TECHNOLOGIES, INC. , a CORPORATION

(Name of Assignee) (Type of Assignee, e.g., corporation, partnership, university, government agency, etc.

states that it is:

1. [X] the assignee of the entire right, title, and interest in;

2. [ ] an assignee of less than the entire right, title, and interest in (The extent (by percentage) of its ownership interest is _____ %); or

3. [ ] the assignee of an undivided interest in the entirety of (a complete assignment from one of the joint inventors was made)

the patent application/patent identified above, by virtue of either:

A. [X] An assignment from the inventor(s) of the patent application/patent identified above. The assignment was recorded in the United States Patent and Trademark Office at Reel 027688, Frame 0957, or for which a copy therefore is attached.

OR

B. [ ] A chain of title from the inventor(s), of the patent application/patent identified above, to the current assignee as follows:

1. From: _____ To: _____

The document was recorded in the United States Patent and Trademark Office at

Reel _____, Frame _____, or for which a copy thereof is attached.

2. From: _____ To: _____

The document was recorded in the United States Patent and Trademark Office at

Reel _____, Frame _____, or for which a copy thereof is attached.

3. From: _____ To: _____

The document was recorded in the United States Patent and Trademark Office at

Reel _____, Frame _____, or for which a copy thereof is attached.

[ ] Additional documents in the chain of title are listed on a supplemental sheet(s).

[X] As required by 37 CFR 3.73(b)(1)(i), the documentary evidence of the chain of title from the original owner to the assignee was, or concurrently is being, submitted for recordation pursuant to 37 CFR 3.11.

[NOTE: A separate copy (*i.e.*, a true copy of the original assignment document(s)) must be submitted to Assignment Division in accordance with 37 CFR Part 3, to record the assignment in the records of the USPTO. See MPEP 302.08]

The undersigned (whose title is supplied below) is authorized to act on behalf of the assignee.
