DOTA-Peptide Conjugates (see p. 391)

Bioconjugate Chemistry

Bioconjugate Chemistry (ISSN 1043-1802) is published monthly by the American Chemical Society at 1155 16th Street, N.W., Washington, DC 20036. Periodicals postage paid at Washington, DC, and additional mailing offices. POSTMASTER: Send address changes to *Bioconjugate Chemistry*, Subscription Services, P.O. Box 3337, Columbus, OH 43210.

EDITORIAL INFORMATION

Instructions for Authors and Copyright Status Form: See the first printed issue of each volume or visit the Publications Division Web site (<http://pubs.acs.org>). Please conform to these instructions when submitting manuscripts.

Manuscript Submission: Submit via the secure ACS Web site (<http://pubs.acs.org/bc>).

Accepted Papers and Proofs: Direct correspondence to Journal Production & Manufacturing Operations, Columbus, OH. Tel: (614) 447-3665. Fax: (614) 447-3745. E-mail: acsproof@acs.org.

Journal Policies: The American Chemical Society and its Editors assume no responsibility for the statements and opinions advanced by contributors. Registered names and trademarks, etc., used in this publication, even without specific indication thereof, are not to be considered unprotected by law.

Document Number: At the end of each document is a 9- or 14-character code that serves as a link between the printed and electronic products and facilitates retrieval of the document in electronic form.

Digital Object Identifier (DOI): The DOI identification system for digital media has been designed to provide persistent and reliable identification of digital objects. Information on the DOI and its governing body, the International DOI Foundation, can be found at <http://www.doi.org>. In the Web editions of ACS journals, the DOI appears at the top of the HTML version of an article and at the bottom of the first page in its PDF version; in the printed editions, the DOI appears in the same location as in the PDF version.

CPC Sales Agreement #2976285: Return undeliverable Canada addresses to: IMEX, PO Box 4332, Station Rd., Toronto, ON M5W 3J4.

REVIEWS

The Synthesis and Chelation Chemistry of DOTA–Peptide Conjugates

391 Luis M. De León-Rodríguez and
Zoltan Kovacs*

COMMUNICATIONS

A family of linear-dendritic “hybrid” polymers containing multiple modular functionalities are designed and synthesized using a three-step, aqueous approach. These polymers are functionalized with a peptide targeting ligand that specifically binds to glucose-regulated protein-78 kDa (GRP-78), a clinically relevant tumor antigen identified in human cancer patients. The resultant systems can condense plasmid DNA into small nanoparticle structures and transfect cells expressing GRP-78 with efficiencies that exceed branched polyethylenimine (bPEI). As such, they may be useful in clinical cancer gene therapy applications.

Kris C. Wood, Samira M. Azarin, Wadih Arap,
Renata Pasqualini, Robert Langer,* and
Paula T. Hammond*

Bioconjugate Chem. 2008, 19, 403 ■

**Tumor-Targeted Gene Delivery Using
Molecularly Engineered Hybrid Polymers
Functionalized with a Tumor-Homing Peptide**

Activation of the A_{2A} receptor, a G protein-coupled receptor (GPCR), for extracellular adenosine, is anti-aggregatory in platelets and anti-inflammatory. PAMAM dendrimers were covalently coupled to multiple copies of an A_{2A} agonist, the nucleoside CGS21680, and characterized spectroscopically. A fluorescent PAMAM-CGS21680 conjugate **5** inhibited aggregation of washed human platelets and was internalized. We envision that our multivalent dendrimer conjugates may improve overall pharmacological profiles compared to the monovalent GPCR ligands.

Yoonkyung Kim, Béatrice Hechler, Athena M. Klutz, Christian Gachet, and Kenneth A. Jacobson*

Bioconjugate Chem. 2008, 19, 406 ■

Toward Multivalent Signaling across G Protein-Coupled Receptors from Poly(amidoamine) Dendrimers

The detection of the human α -thrombin protein by MRI is reported by designing a thrombin targeted MRI contrast agent. The contrast agent is composed of thrombin aptamer functionalized superparamagnetic iron oxide nanoparticles. The detection of thrombin is based on the increase in the size of nanoparticle assembly, which leads to a change in brightness of the image. A detectable change in MR signal is observed with 25 nM thrombin in human serum.

Mehmet Veysel Yigit, Debapriya Mazumdar, and Yi Lu*

Bioconjugate Chem. 2008, 19, 412

MRI Detection of Thrombin with Aptamer Functionalized Superparamagnetic Iron Oxide Nanoparticles

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
