ADDITIONAL MATERIALS

Attached as Exhibit 1 is a new drawing of Applicant's mark.

AMENDMENTS

- 1. Please amend the color claim as follows:
 - The colors green, white and black are claimed as distinctive features of the mark -
- 2. Please add the following color description to the application:
 - -- The word SHOP which forms part of the term MASTIHASHOP appears in the color green; the words MASTIHA, VOYAGE TO THE EAST MEDITERRANEAN, THE CHIOS MASTIHA GROWERS ASSOCIATION, ENOSI MASTICHOPARAGOGON CHIOU and 1938 appear in the color black; the spaces between the two concentric circles, between the inner circle and the four squares, the space between the four squares and bound in the square design appear in the color white --
- 3. Please enter the following disclaimer in respect of services in International class 35:
 - -- No claim is made to the exclusive right to use 1938 and EAST MEDITERRANEAN --
- 4. Please amend the identification of goods and services covered by Applicant's application as follows:

International class 3

Please amend "acne treating cosmetic creams" to "non-medicated acne treating cosmetic creams."

TRADEMARK LAW OFFICE 111
Serial No. 79/018,868
Mark: MASTIHASHOP VOYAGE
TO THE EAST MEDITERRANEAN
& Design

International class 30

- a. Please delete "sweets with biscuits."
- b. Please amend "mastic-based sweets" to "mastic-based sweets, namely, puddings."
- c. Please amend "delight" to "delight, namely, Turkish delight and loukoumi."
- d. Please delete the second reference to "waffles1."

International class 35

Please amend "business management and exploitation of business matters relevant to webpages and the internet, namely, licensing and merchandising services" to "business management and exploitation of business matters relevant to webpages and the internet, namely, licensing of computer software, intellectual property, technology and know-how and product licensing merchandising services."

REMARKS

A. Color Claim and Color Description

The examining attorney has asked Applicant to submit a color claim and color description. Applicant has complied with the examining attorney's requirement.

B. Drawing of Applicant's Mark

The examining attorney has asked Applicant to submit a new drawing. Applicant has submitted a new drawing of Applicant's mark. *See* Exhibit 1.

¹ The first reference to "waffles" (appearing after "dried bread" and before "pies") should be maintained.

TRADEMARK LAW OFFICE 111

Serial No. 79/018,868

Mark: MASTIHASHOP VOYAGE TO THE EAST MEDITERRANEAN

& Design

C. Disclaimer

The examining attorney has asked Applicant to disclaim 1938 and EAST

MEDITERRANEAN in respect of services in International class 35. Applicant has inserted a

properly worded disclaimer.

The examining attorney has also asked Applicant to disclaim the wording THE

CHIOS MASTIHA GROWERS ASSOCIATION, the non-Latin characters that mean CHIOS

MASTIHA GROWERS ASSOCIATION and the transliteration of those foreign characters

which is ENOSI MASTIOPARAGOGON CHUOU in respect of classes 3, 5, 29 and 30 apart

from the mark on the ground that the terms are merely descriptive. Applicant respectfully

disagrees with the examining attorney's position and requests that the examining attorney

reconsider and withdraw the refusal because Applicant is the sole and exclusive source of the

goods covered by classes 3, 5, 29 and 30 and the term THE CHIOS MASTIHA GROWERS

ASSOCIATION has acquired distinctiveness in relation to goods covered by classes 3, 5, 29

and 30 of Applicant's application, as stated in the attached declaration.

i. Applicant is the Only Source of Mastiha and Mastiha Products in the United

States

Applicant, The Chios Mastiha Growers Association, is an agricultural cooperative

engaged in the business of selling mastiha gum (hereinafter referred to as "mastiha") and

products derived from mastiha such as mastiha essential oil and chewing gum. See

Declaration of Konstantinos Ganiaris, President of Applicant, attached as Exhibit 2

4

TRADEMARK LAW OFFICE 111 Serial No. 79/018,868

Mark: MASTIHASHOP VOYAGE TO THE EAST MEDITERRANEAN

& Design

(hereinafter "Ganiaris Decl.") at ¶ 3-4 and 7. Mastiha is a resin-type gum, harvested exclusively from the mastiha tree, Pistacia Lentiscus L. var. Chia. This tree can only be grown in twenty-four (24) villages in the southern part of the Greek island of Chios in the north-eastern Aegean Sea. Ganiaris Decl. at ¶ 3. Owing to the fact that mastiha only originates in one place throughout the world, the European Union has recognized mastiha and mastiha products, namely, mastiha essential oil and mastiha chewing gum, as protected designations of origin (hereinafter "PDOs"). Ganiaris Decl. at ¶ 11.

Applicant was founded in 1938 by a special law, namely, Compulsory Law No. 1390 of 8/10 October 1938 (hereinafter "Law"), and continues to be in good standing. Ganiaris Decl. at ¶ 6. The Law requires all growers of mastiha to become members of Applicant. Ganiaris Decl. at ¶ 7. In addition, the Law requires each and every grower of mastiha to deliver its entire produce (except for a small quantity for personal consumption) to Applicant. Ganiaris Decl. at ¶ 9. Thus, under the Law, Applicant has an exclusive right over the mastiha grown by growers in the southern part of the island of Chios (the only place in the world where mastiha is grown). The Law also gives Applicant the sole and exclusive right to commercialize mastiha and mastiha products all over the world, including the United States.

Applicant first cleans and processes the mastiha crop that is delivered to it by the growers of mastiha. Ganiaris Decl. at ¶ 12. Applicant then packages the mastiha and mastiha products and sells them either directly or indirectly in numerous countries around the world, including the United States. Ganiaris Decl. at ¶ 13. Thus, one hundred percent

TRADEMARK LAW OFFICE 111

Serial No. 79/018,868

Mark: MASTIHASHOP VOYAGE

TO THE EAST MEDITERRANEAN

& Design

(100%) of mastiha and mastiha products, namely, mastiha essential oil and chewing gum,

sold in the United States and other countries emanate from Applicant. Ganiaris Decl. at ¶ 14.

Applicant's exclusive rights in mastiha and mastiha products are further safeguarded

by additional laws passed by the state of Greece. Ganiaris Decl. at ¶ 10.

Applicant has also been recognized as having exclusive rights in mastiha and mastiha

products outside Greece. The European Union which comprises twenty seven (27) countries

recognizes Applicant as the only legitimate rights holder of the PDOs, namely, Chios

Mastiha, Chios Mastiha oil and Chios chewing gum. Ganiaris Decl. at ¶ 11.

Thus, the only source of mastiha is the Greek island of Chios, all mastiha harvested on

Chios (except for a small quantity for personal consumption by the growers) must be turned

over to Applicant, and Applicant is the sole entity that is authorized to sell and sells mastiha

in the United States. It follows that the term THE CHIOS MASTIHA GROWERS

ASSOCIATION can not help but function as a source identifier for the goods bearing this

term. Ganiaris Decl. at ¶ 2. See In re Failure Analysis Associates, 1 USPQ2d 1144 (TTAB

1986) (term FAILURE ANALYSIS ASSOCIATES, which had not been used by other

entities to denote type of services rendered by applicant, held sufficient to establish, prima

facie, that the relevant public understands the term as nothing more than name of the services

rendered by applicant).

& Design

ii. The Term THE CHIOS MASTIHA GROWERS ASSOCIATION Has
Acquired Distinctiveness Through Substantially Exclusive and Continuous
Use For At least Five Years Prior to the Date of Applicant's Declaration

The term THE CHIOS MASTIHA GROWERS ASSOCIATION has become distinctive through Applicant's substantially exclusive and continuous use for at least five years on and in connection with mastiha and mastiha products in commerce between Greece and the United States or in U.S. interstate commerce.

Section 2(f) of the Trademark Act, 15 U.S.C. §1052(f), provides that "proof of substantially exclusive and continuous use" of a designation "as a mark by the applicant in commerce for the five years before the date on which the claim of distinctiveness is made" may be accepted as *prima facie* evidence that the mark has acquired distinctiveness as used with the applicant's goods in commerce. 37 C.F.R. §2.41(b); T.M.E.P. §1205.05. If an applicant chooses to seek registration under Section 2(f) of the Trademark Act, 15 U.S.C. §1052(f), by using the statutory suggestion of five years of use as proof of distinctiveness, the applicant should submit a claim of distinctiveness. T.M.E.P. §1205.05(d). The claim of distinctiveness is generally required to be supported by an affidavit or declaration under 37 C.F.R. §2.20, signed by a person properly authorized to sign on behalf of applicant under 37 C.F.R. §2.33(a). T.M.E.P. §1205.05(d).

Here, Applicant has used the term THE CHIOS MASTIHA GROWERS

ASSOCIATION substantially exclusively and continuously for at least five years on and in

TRADEMARK LAW OFFICE 111 Serial No. 79/018,868

Mark: MASTIHASHOP VOYAGE TO THE EAST MEDITERRANEAN

& Design

connection with mastiha and mastiha products in commerce between Greece and the United States or in U.S. interstate commerce. Ganiaris Decl. at ¶ 16. Applicant's claim of five years' use should be accepted as prima facie evidence that the term THE CHIOS MASTIHA GROWERS ASSOCIATION has acquired distinctiveness under Section 2(f) of the Trademark Act, 15 U.S.C. §1052(f).

iii. The Term THE CHIOS MASTIHA GROWERS ASSOCIATION Has Acquired Distinctiveness Through Use in the United States

Furthermore, a review of the evidence submitted along with the Ganiaris Declaration shows that the term THE CHIOS MASTIHA GROWERS ASSOCIATION has acquired distinctiveness by long and extensive use in commerce such that the U.S. press, trade, and public widely recognize it as a source identifier of goods emanating from Applicant.

Accordingly, Applicant should not be required to disclaim the term THE CHIOS MASTIHA GROWERS ASSOCIATION.

Applicant has sold mastiha and mastiha based products in the United States for close to five decades. Long use of the mark is one relevant factor to consider in determining whether a mark has acquired distinctiveness. T.M.E.P. 1212.06(a). These products have been distributed throughout the United States either directly by Applicant or through third-party distributors and retailers in packaging bearing the term THE CHIOS MASTIHA GROWERS ASSOCIATION. Such use of the term THE CHIOS MASTIHA GROWERS ASSOCIATION has helped establish consumer recognition of Applicant as the source of the

TRADEMARK LAW OFFICE 111 Serial No. 79/018,868

Mark: MASTIHASHOP VOYAGE TO THE EAST MEDITERRANEAN

& Design

mastiha and mastiha products. Ganiaris Decl. at ¶ 17. Moreover, as explained above, such use has been exclusive.

Furthermore, Applicant's use of THE CHIOS MASTIHA GROWERS

ASSOCIATION has been substantial. Applicant has enjoyed strong sales since the early days. Ganiaris Decl. at ¶ 17. Applicant's direct sales of mastiha during the period between 1959 through 2006 exceeded one hundred and thirty five thousand kilograms or three hundred thousand pounds. During the years 2000 through 2006, Applicant's direct sales of unprocessed mastiha exceeded thirty eight thousand kilograms or eighty five thousand pounds. The dollar value of this unprocessed mastiha was approximately 3 million Euros² or US\$ 4 million³. Ganiaris Decl. at ¶ 18 and 19. See In re Uncle Sam Chemical Co., Inc., 229 USPQ 233 (TTAB 1986) (§2(f) claim of acquired distinctiveness of SPRAYZON for "cleaning preparations and degreasers for industrial and institutional use" found persuasive where applicant had submitted declaration of its president supporting sales figures and attesting to over eighteen years of substantially exclusive and continuous use).

Applicant has also promoted the term THE CHIOS MASTIHA GROWERS ASSOCIATION as an indicator of source for its goods. Ganiaris Decl. at ¶ 20. Advertisements featuring the term THE CHIOS MASTIHA GROWERS ASSOCIATION in conjunction with the goods covered by Applicant's application have appeared in

² This figure has been calculated using a yearly average price per kilo.

³ The conversion from Euros into dollars has been done using the exchange rate as of March 24, 2007.

TRADEMARK LAW OFFICE 111

Serial No. 79/018,868

Mark: MASTIHASHOP VOYAGE

TO THE EAST MEDITERRANEAN

& Design

publications, including general interest magazines targeted towards the general public, as

well as specialty publications such as magazines targeted towards food connoisseurs and the

culinary industry. Ganiaris Decl. at ¶ 20. Applicant and Applicant's products have also

received unsolicited media coverage on the Today Show and Good Morning America.

Ganiaris Decl. at ¶ 21. These shows are watched by millions of people across the United

States.

In 2006 Applicant embarked on an aggressive advertising campaign which cost

Applicant close to one million three hundred forty thousand US\$ (1,340,000 US\$). Ganiaris

Decl. at ¶ 20. As part of this campaign, Applicant co-sponsored an event called "Passport to

a Taste of Greece" in which numerous well-known New York City restaurants participated.

Brochures and promotional materials distributed during this event prominently listed

Applicant as a co-sponsor of the event. Ganiaris Decl. at ¶ 22. Applicant's association with

mastiha and mastiha products has also been enhanced through presentations about mastiha in

major U.S. cities such as New York and Washington, D.C. In December 2006, Applicant

presented a program at the famous French Culinary Institute where chefs and beauty experts

presented the culinary and cosmetic uses of mastiha to an audience consisting of journalists

from prominent magazines, chefs and ordinary persons interested in mastiha. Ganiaris Decl.

at ¶ 23. Also, in December 2006, the Greek embassy in Washington, D.C. held a program for

journalists and media persons about mastiha. This program was hosted by the Greek

10

Serial No. 79/018,868

Mark: MASTIHASHOP VOYAGE TO THE EAST MEDITERRANEAN

& Design

ambassador to the United States and was sponsored, in part, by Applicant, thus increasing the exposure of Applicant and its products to the U.S. media and public. *Id*.

Not only has Applicant promoted THE CHIOS MASTIHA GROWERS

ASSOCIATION as a source identifier among the general public, it has also promoted itself among the members of the trade. Invoices issued to Applicant's retailers and distributors in the United States prominently display Applicant's name. Ganiaris Decl. at ¶ 17. Such use has helped in consumer recognition of Applicant as the source of the mastiha and mastiha products. *Id.*

Applicant has also participated in international Food & Drink trade shows in the United States, such as the *Summer and Winter Fancy Food Shows* in New York and San Francisco. Applicant's booths and promotional materials at these trade shows display Applicant's name such that the trade and other persons who visit these trade shows know that the mastiha and mastiha products emanate from Applicant. Ganiaris Decl. at ¶ 24.

For all the above reasons, the term THE CHIOS MASTIHA GROWERS

ASSOCIATION has become widely recognized by the U.S. press, trade, and public as a source identifier of Applicant's goods.

Since Applicant should not be required to disclaim THE CHIO MASTIHA
GROWERS ASSOCIATION, it should also not be required to disclaim the non-Latin
characters that mean CHIOS MASTIHA GROWERS ASSOCIATION and the transliteration
of those foreign characters which is ENOSI MASTIOPARAGOGON CHUOU.

E. <u>Identification of Goods and Services</u>

Applicant responds to the examining attorney's requirements as follows:

Class 3: The examining attorney has asked Applicant to delete "acne treating cosmetic

creams" from the application. Applicant has clarified the nature of these creams by adding

the term "non-medicated." According to the Trademark Acceptable Identification of Goods

and Services Manual ("Manual"), non-medicated acne treatment preparations are properly

classified in class 3. See printout from Manual attached as Exhibit 3. A non-medicated acne

treating cosmetic cream is a type of non-medicated acne treatment preparation. Accordingly,

Applicant requests the examining attorney to withdraw the objection regarding these goods.

Class 30: The examining attorney has asked Applicant to specify "sweets made with

biscuits", "mastic based sweets" and "delight." Applicant has deleted "sweets made with

biscuits." Applicant has amended "mastic based sweets" to "mastic based sweets, namely,

puddings." Applicant has also amended "delight" to "delight, namely, Turkish delight and

loukoumi." Loukoumi is the Greek version of Turkish delight. See printout from website

located at www.greekproducts.com attached as Exhibit 4.

Lastly, the examining attorney states that "waffles" appears twice in the identification

of goods covered by this class. Applicant has deleted the second reference to "waffles."

12

TRADEMARK LAW OFFICE 111
Serial No. 79/018,868
Mark: MASTIHASHOP VOYAGE
TO THE EAST MEDITERRANEAN
& Design

Class 35: The examining attorney has asked Applicant to specify "licensing and merchandising services." Applicant has specified these services.

The identification of goods covered by classes 5 and 29 remain unchanged.

Pursuant to the amendments, the application covers the following goods and services:

BLEACHING PREPARATIONS FOR COSMETIC PURPOSES AND FOR Class 3: HOUSEHOLD USE; PREPARATIONS FOR LAUNDRY USE, NAMELY, FABRIC SOFTENERS, SEAWEED GELATINE; GENERAL PURPOSE PREPARATIONS FOR CLEANING AND POLISHING; ABRASIVE LIOUIDS AND POWDERS; SOAPS, NAMELY, LIQUID, HAND AND LAUNDRY SOAPS; AFTER-SHAVE LOTION; SHAVING FOAM; PERFUMERY; COSMETICS; HAIR DRESSING PREPARATIONS, NAMELY, SHAMPOOS, CONDITIONERS, POMADE; PERFUMES, ESSENTIAL OILS AND COSMETIC PREPERATIONS WITH OR WITHOUT PERFUME, NAMELY, SKIN CREAMS FOR THE NECK, TREATING COSMETIC CREAMS, NON-MEDICATED ACNE CLEANSING MILK FOR THE FACE, FACE SCRUB, BODY SCRUB, MOISTURIZING BODY MILK, CREAM FOR THE FEET; BATH SALTS; NON-MEDICATED BATH PREPARATIONS; BEAUTY CREAMS AND PREPARATIONS FOR BODY AND FACE CARE, SKIN HYDRATION CREAMS, CREAMS WITH PERFUME FOR BODY AND FACE, EYE CREAMS; CREAMS, LOTION AND CLEANING LOTION FOR THE BODY, FACE, SKIN AND HANDS; BREATH FRESHENERS; ESSENTIAL OIL, NAMELY, MASTIC OIL FOR COSMETIC USE AND FOR CLEANING; MOUTH WASHES, NOT FOR MEDICAL PURPOSES; TOOTHPASTES; TEETH AND MOUTH CLEANING AND WASHING PREPARATIONS, NOT FOR MEDICAL PURPOSES.

Mark: MASTIHASHOP VOYAGE TO THE EAST MEDITERRANEAN & Design

Serial No.: 79/018868

Filing Date: January 23, 2005

APPLICANT:

The Chios Mastiha Growers Association a Cooperative with Limited Liability organized

under the laws of Greece

ADDRESS:

K. Monomachou 1 GR-82 100 Chios, Greece

PRIORITY FILING:

International Registration No. 0871269 Registration Date: January 23, 2005

DESCRIPTION OF MARK:

The mark consists of the word MASTIHASHOP in lower case letters and a stylized font with the letters 'S', 'H', 'O' and 'P' printed in green; all other letters are printed in black. Under this are printed the words VOYAGE TO THE EAST MEDITERRANEAN, all in upper case letters and printed in black. To the right of this are two circles, one within the other, and between the two circles is written "Chios Mastiha Growers Association 1938", in black and in Greek letters. Within the smaller circle are four, maze-like squares of equal size also printed in black on a white background. To the right of the outer circle are the words THE CHIOS on first line; the word MASTIHA, on the second line; the word GROWERS, on the third line; and the word ASSOCIATION, on the fourth line. All are shown in upper case letters, in a stylized font and printed in black.

DECLARATION OF KONSTANTINOS GANIARIS

Konstantinos Ganiaris, pursuant to 28 U.S.C. § 1746 and Trademark Rule 2.20, declares:

- 1. I am the President of The Chios Mastiha Growers Association (hereinafter referred to as "Applicant"). As such, I am thoroughly familiar with the business operations of Applicant and I am authorized to make this Declaration on behalf of Applicant and the facts declared in this Declaration are within my own knowledge or have been provided from Applicant's records, and I believe them to be true.
- 2. Applicant is the owner of U.S. Application Ser. No. 79/018,868 for a mark that includes, among other words, the term THE CHIOS MASTIHA GROWERS

 ASSOCIATION. I understand that in an Office Action dated September 26, 2006, the

Examining Attorney has expressed the opinion that Applicant cannot claim exclusive rights in the term THE CHIOS MASTIHA GROWERS ASSOCIATION because it does not identify the source of goods that originate from Applicant. I respectfully disagree with the Examining Attorney's finding and submit this declaration to demonstrate that the term THE CHIOS MASTIHA GROWERS ASSOCIATION is understood by consumers to indicate the source of Applicant's goods. In fact, the term THE CHIOS MASTIHA GROWERS ASSOCIATION can not help but function as a source identifier for the goods bearing this term because Applicant is the only source of such goods. Moreover, because of the long and extensive use in commerce of the term THE CHIOS MASTIHA GROWERS ASSOCIATION, it has become widely recognized by the U.S. press, trade, and public as a source identifier for Applicant. Accordingly, Applicant should be allowed to claim exclusive rights in the term THE CHIOS MASTIHA GROWERS ASSOCIATION.

Mastiha and Mastiha Products

- 3. Chios Mastiha (or mastic in English) gum (hereinafter referred to as "mastiha") is a resin-type gum harvested exclusively from the mastiha tree, Pistacia Lentiscus L. var. Chia. This tree can only be grown in twenty-four (24) villages in the southern part of the Greek island of Chios in the north-eastern Aegean Sea. *See* Exhibit A.
- 4. Mastiha gum or mastiha, as it is commonly known, can either be sold in its raw form or it can be used to make mastiha essential oil, chewing gum and other products. *See* Exhibit A.
- 5. Mastiha has unique attributes that enable its use as a cosmetic, disinfectant and condiment and for medicinal purposes. *See* Exhibit A.

Applicant's History

- 6. Applicant was founded in 1938 by a special law, namely, Compulsory Law No. 1390 of 8/10 October 1938, and continues to be in good standing. Copies of Compulsory Law No. 1390 of 8/10 October 1938, the certificate of good standing and a certificate from the Trade Registry along with sworn English translations are attached as Exhibit B.
- 7. Applicant is an agricultural cooperative consisting of all the growers of mastiha in the island of Chios. A copy of extracts of Applicant's constitution and a sworn English translation is attached as Exhibit C.
- 8. Applicant has its seat in the island of Chios, which is the only place in the world where mastiha can be grown. *See* Exhibits A and C.
- 9. Under Compulsory Law No. 1390 of 8/10 October 1938 each and every grower of mastiha must deliver his entire crop (except for a small quantity for personal consumption) to Applicant. See Exhibit B.
- 10. In addition to Compulsory Law No. 1390 of 8/10 October 1938, there are other laws which give Applicant the sole and exclusive right to regulate the production and processing of mastiha. Copies of these laws and sworn English translations are attached as Exhibit D.
- 11. Owing to unique circumstances in which mastiha is produced, the European Union has recognized mastiha and mastiha products, namely, mastiha essential oil and mastiha chewing gum, as protected designations of origin. Furthermore, Applicant is the only legitimate rights holder of the protected designations of origin "Chios Mastiha" (Chios Mastic), "Chios Mastiha oil," and "Chios chewing gum" in the European Union.

Applicant's Activities

- 12. Applicant cleans and processes the mastiha crop that is delivered to it by the growers of mastiha.
- 13. The mastiha and mastiha products are then packaged and sold by Applicant either directly or indirectly in numerous countries around the world, including the United States. Attached as Exhibit E is an article dated September 28, 2003 that appeared in the Greek newspaper, *Express*, which states that mastiha and mastiha products are exported by Applicant to the United States. A sworn English translation of the article is also attached.
- 14. Thus, one hundred percent (100%) of mastiha and mastiha products, namely, mastiha essential oil and chewing gum, sold in the United States and other countries emanate from Applicant.
- 15. In the United States, Applicant sells mastiha and mastiha products either directly or through third-parties in packaging bearing the term THE CHIOS MASTIHA GROWERS ASSOCIATION. Representative samples of Applicant's packaging are attached as Exhibit F. Thus, consumers who see such packaging will know that mastiha and mastiha products originate from Applicant.

The Term THE CHIOS MASTIHA GROWERS ASSOCIATION Has Become <u>Distinctive Through Substantially Exclusive and Continuous Use</u>

16. The term THE CHIOS MASTIHA GROWERS ASSOCIATION has become distinctive through Applicant's substantially exclusive and continuous use for at least five years before the date of this declaration on and in connection with mastiha and mastiha products in commerce between Greece and the United States or in U.S. interstate commerce.

Applicant's Use of the Term THE CHIOS MASTIHA GROWERS ASSOCIATION in the United States

- 17. Applicant has enjoyed strong sales of mastiha and mastiha products in the United States since at least as early as 1959 and continues to do so till the present day. Copies of representative invoices issued by Applicant to U.S. customers during the years 1982-1983 and from 2000 to the present are enclosed as Exhibit G. Applicant uses the term THE CHIOS MASTIHA GROWERS ASSOCIATION prominently on invoices issued to U.S. customers. Such use has helped in consumer recognition of Applicant as the source of the mastiha and mastiha products. As evidenced by these invoices, Applicant's branded products that bear the term THE CHIOS MASTIHA GROWERS ASSOCIATION have been distributed throughout the United States.
- 18. Applicant's direct sales of mastiha during the period between 1959 through 2006 exceeded one hundred and thirty five thousand kilograms or three hundred thousand pounds.
- 19. During the years 2000 through 2006, Applicant's direct sales of unprocessed mastiha exceeded thirty eight thousand kilograms or eighty five thousand pounds. The dollar value of this unprocessed mastiha was approximately 3 million Euros¹ or US\$ 4 million².
- 20. Applicant has promoted the term THE CHIOS MASTIHA GROWERS

 ASSOCIATION as an indicator of source for its goods. In 2006 alone, Applicant expended close to 1,030,000 Euro or US\$ 1,340,000 million to advertise products bearing the term

 THE CHIOS MASTIHA GROWERS ASSOCIATION. Advertisements and articles prominently featuring THE CHIOS MASTIHA GROWERS ASSOCIATION on mastiha and

¹ This figure has been calculated using a yearly average price per kilo.

25034/004/785658.1

_

² The conversion from Euros into dollars has been done using the exchange rate as of March 24, 2007.

mastiha goods have appeared in publications such as *The National Herald, Food and Wine* magazine, and *Gourmet Retailer Magazine*. A representative sample of an advertisement that appeared in *The National Herald* is attached. *See* Exhibit H. These advertisements further cement consumers' association of the term THE CHIOS MASTIHA GROWERS ASSOCIATION as designating goods originating from Applicant.

- 21. Applicant and Applicant's mastiha and mastiha products have also received unsolicited coverage in U.S. media. For instance, in August 2004, Katie Couric talked about the cosmetic properties of mastiha (referring to cosmetics bearing the term THE CHIOS MASTIHA GROWERS ASSOCIATION) on the *Today Show*, and in December 2006, mastiha ice cream received coverage on *Good Morning America*. *See* Exhibit I. These shows are seen by millions of people all over the United States.
- 22. In October-November 2006, Applicant co-sponsored an event called "Passport to a Taste of Greece" in which numerous well-known New York City restaurants participated. A brochure for the event is attached as Exhibit J which shows that The Chios Mastiha Growers Association was listed as a co-sponsor of the event. Upon information and belief this event was attended by thousands of people.
- 23. Applicant's association with mastiha and mastiha products has also been enhanced through presentations about mastiha in major U.S. cities such as New York and Washington, D.C. In December 2006, Applicant presented a program at the French Culinary Institute where chefs and beauty experts presented the culinary and cosmetic uses of mastiha. *See* Exhibit K. The attendees included journalists from prominent magazines, chefs and ordinary persons interested in mastiha. Also, in December 2006, the Greek embassy held a program

for journalists and media persons about mastiha. This program was hosted by the Greek ambassador to the United States and was sponsored, in part, by Applicant, thus increasing the exposure of Applicant and its products to the U.S. media and public. *See* Exhibit L.

24. Applicant has also participated in international Food & Drink trade shows in the United States, such as the *Summer and Winter Fancy Food Shows* in New York and San Francisco. Applicant's booths and promotional materials at these trade shows display Applicant's name such that the trade and other persons who visit these trade shows know that the mastiha and mastiha products emanate from Applicant. *See* Exhibit M.

Conclusion

Given the fact that the only source of mastiha is the Greek island of Chios, and all mastiha harvested on Chios (except for a small quantity for personal consumption by the growers) must be turned over to Applicant, the term THE CHIOS MASTIHA GROWERS ASSOCIATION can not help but function as a source identifier for the goods bearing this term. Even were that not the case, however, because of the long and extensive use in commerce of the term THE CHIOS MASTIHA GROWERS ASSOCIATION, this term has become widely recognized by the U.S. press, trade, and public as a source identifier for Applicant.

Declaration

Pursuant to Trademark Rule 2.20, the undersigned, having been warned that willful false statements and the like are punishable by fine or imprisonment, or both (U.S.C. §1001), and may jeopardize the validity of this document or the application or any registration resulting therefrom, hereby declares that all of the foregoing statements made from his own knowledge are true and that all of the foregoing statements made on information and belief are believed to be true.

I HEREBY DECLARE UNDER PENALTY OF PERJURY UNDER THE LAWS OF THE UNITED STATES OF AMERICA THAT THE FOREGOING IS TRUE AND CORRECT. EXECUTED AT Chios. Greece ON March 25, 2007.

Dated: March 25, 2007

Respectfully submitted.

THE CHOS MASTIHA GROWER

HEADLINE: Greek Coffeeway To Open Mastiha Shops Throughout Greece

SOURCE: Naftemporiki

BODY:

Greek coffee shops chain Coffeeway, owned by coffee retailer Coffee Connection, is currently in negotiations with the Chios Mastiha Growers Association, with the aim of opening Mastiha shops selling mastic, the unique substance produced only on the eastern Aegean island of Chios.

The agreement would authorise Coffeeway to sell the island's mastic gum (mastiha) through special Mastiha Corner Shops, which will open in all 74 coffee shops run by Coffeeway.

The Chios mastic gum is widely used in the production of many alcoholic drinks, especially liqueurs and ouzo. The liqueur "Chios Masticha" and the drink "Masticha Ouzo" are well-known Greek drinks.

The Chios Mastiha Growers Association (www.gummastic.gr) was established in 1938 and currently numbers 6,000 members. It employs around 58.

Coffee Connection (www.coffeeway.com), which sells freshly ground coffee, opened its first store in the centre of Athens, in Kolonaki, in 1994 when Coffee Connection was established by I.V. Benopoulos, president and CEO. The company was set up with the aim to offer a wide range of types of coffee in the local market which was until then limited to the Greek/Arabic type of coffee bought from traditional coffee shops.

AGRICULTURAL AND FOOD CHEMISTRY

Chemical Composition and Antibacterial Activity of the Essential Oil and the Gum of *Pistacia lentiscus* Var. chia

CHRISTINA KOUTSOUDAKI, MARTIN KRSEK, AND ALISON RODGER*,

Department of Chemistry and Department of Biological Sciences, University of Warwick, Warwick, Coventry CV4 7AL, United Kingdom

The essential oil and gum of *Pistacia lentiscus* var. *chia*, commonly known as the mastic tree, are natural antimicrobial agents that have found extensive uses in medicine in recent years. In this work, the chemical composition of mastic oil and gum was studied by GC-MS, and the majority of their components was identified. α -Pinene, β -myrcene, β -pinene, limonene, and β -caryophyllene were found to be the major components. The antibacterial activity of 12 components of mastic oil and the oil itself was evaluated using the disk diffusion method. Furthermore, attempts were made to separate the essential oil into different fractions in order to have a better picture of the components responsible for its antibacterial activity. Several trace components that appear to contribute significantly to the antibacterial activity of mastic oil have been identified: verbenone, α -terpineol, and linalool. The sensitivity to these compounds was different for different bacteria tested (*Escherichia coli*, *Staphylococcus aureus*, and *Bacillus subtilis*), which suggests that the antibacterial efficacy of mastic oil is due to a number of its components working synergistically. The establishment of a correlation between the antibacterial activity of mastic oil and its components was the main purpose of this research. Mastic gum was also examined, but it proved to be more difficult to handle compared to the essential oil.

KEYWORDS: Mastic oil; antibacterial activity; GC-MS; disk diffusion

INTRODUCTION

Mastic is a white, semitransparent, natural resin that is obtained as a trunk exudate from mastic trees. The mastic tree is an evergreen bush that thrives in the Eastern Mediterranean area, but only in the southern part of the island of Chios, a Greek island, does the plant produce resin that congeals. Its scientific name is Pistacia lentiscus, of the Anacardiaceae family. Mastic gum has numerous qualities and uses and is now exported to many countries. In medicine, a lot of research has been undertaken on the properties of mastic gum. For example, mastic gum has been used in clinical trials on patients with peptic ulcers (1). The administration of mastic (1 g daily) relieved the pain and healed the stomach and duodenal ulceration in the majority of the patients within 2 weeks. The same group of researchers (2) confirmed that mastic gum kills Helicobacter pylori, at concentrations as low as 0.06 mg/mL. In an earlier study (3), the effect of mastic has been studied on experimentally induced gastric and duodenal ulcers in rats. Mastic at an oral dose of 500 mg/kg produced a significant reduction of gastric secretions, protected cells, and reduced the intensity of gastric mucosal damage. The in vitro antimicrobial activity of P. lentiscus extracts has also been tested on bacteria and fungi (4).

In surgery, byproducts of mastic gum are used for the production of special stitches that are eventually absorbed by the human body. In dentistry, mastic acts as an oral antiseptic and tightens the gums (5), and for that reason it is used in toothpastes and chewing gums. The essential oil of mastic gum is also used in perfumery and in the cosmetic industry (creams and other facial products) (6). Moreover, there are culinary uses of mastic, for example, in biscuits, ice cream, and mastic "sweets of the spoon".

The chemical composition of the mastic oil and mastic gum has recently been studied (7, 8), but as yet no correlation between the antibacterial activity and the composition of mastic has been reported for the variety *chia*. The purpose of this study was to examine the chemical composition of this oil and gum and to examine the antibacterial activity of 12 individual components of mastic oil against three test organisms.

MATERIALS AND METHODS

Mastic oil (100% pure) and mastic gum, both of the harvest of 2002, were kindly provided by Chios Gum Mastic Growers Association

† Department of Chemistry. ‡ Department of Biological Sciences.

Of the different plant extractions (decoctions, infusions, macerations, and extracts from petroleum ether and from ethanol), decoctions showed the best antibacterial activity. It has also been found that chewing mastic gum prevents plaque formation or reduces it when it has already been formed on those teeth surfaces that can be reached by the mass of mastiche during its methodical chewing (5).

^{*} Corrrsponding author. Telephone: +44(0)-24-76574696/76523234. Fax: +44(0)-24-76575795. E-mail: a.rodger@warwick.ac.uk.

7682

(Chios, Greece) and VIORYL S. A. (Athens, Greece). Five oil samples were used in the analysis: mastic oil as received, three successive fractions from distillation (see below), and the fraction of the oil that remained in the flask after the distillation. The oil was diluted in ethanol (50% v/v) in order to reduce the concentration of the pure oil and identify even its trace components. The distillate fractions (see below) were analyzed as collected. Mastic gum was ground with the help of a pestle and mortar and was then partially dissolved in ethanol (30 mg/mL), and the undissolved part of the gum was removed by filtration and disgarded. The ethanol soluble part of the gum was analyzed by GC-MS and GC-FID and was also tested for its antibacterial activity. Standards were also analyzed and tested for their antibacterial activity: α -pinene. β -myrcene, p-cymene, β -caryophyllene, verbenone, α -terpineol, methyl isoeugenol, limonene, β -pinene, linalool, γ -terpinene, and trans-anethole. All of the above components were of the highest purity available (above 97%) and were obtained from Sigma-Aldrich Chemical Co. (Dorset, UK), with the exception of a-terpineol and trans-anethole, which were obtained from Fisher Scientific (Leicestershire, UK). A 1% v/v solution in ethanol was prepared for each standard in order to be analyzed by GC-MS and GC-FID.

Distillation of Mastic Oil. A microdistillation setup was used to separate the mastic oil (2 mL) into fractions of differing volatilities. The sample was heated by an oil bath and the pressure in the distillation system was reduced to 20 mmHg. The first fraction was collected without any heating (maximum temperature 20 °C). When the distillation stopped, the mastic oil that remained in the flask was gradually heated to 21 °C and the distillate collected (fraction 2) until distillation ceased. No further distillate was collected, despite increasing the temperature of the oil bath to 140 °C. When the apparatus was removed from the oil bath, it was observed that the remaining essential oil had become very viscous and its color had changed from very pale yellow to very intense yellow. The flask was rinsed twice with ethanol. The first rinse became fraction 3 and the second fraction 4.

Chemical Composition of Mastic Oil and Gum. The GC-MS analysis of the samples was undertaken using a Shimadzu GC-17A, OP-5000 GC-MS system, operating in electron ionization (EI) mode with an ionization energy of 70 eV. The instrument was equipped with a Supelco SPB TM-1 capillary column (30 m, 0.25 mm i.d., 0.25 μm film thickness) with helium as carrier gas at 0.7 mL/min flow rate. Column temperature was initially kept for 1 min at 60 °C, gradually increased to 180 °C at a rate of 3.5 °C/min, and finally increased to 280 °C at a rate of 20 °C/min and kept there for 2 min. The injector and interface were set at 220 and 250 °C, respectively. The gas chromatograph operated in the split mode with a split ratio of 93:1. The mass spectrum was monitored starting at m/z 60 and ending at m/z 350, with a scan interval of 0.5 and a threshold of 400, and the solvent cut was set at 4 min. The injection volume was 1 µL. The injected solutions were (i) solution of mastic oil in ethanol (50% v/v), (ii) ethanol solutions of each standard (1% v/v), (iii) the ethanol-soluble part of mastic gum (30 mg/mL original sample before filtration), and (iv) the collected fractions from the distillation (see Distillation of Mastic Oil).

The chemical composition of mastic oil and gum was also analyzed using GC-FID, since the flame ionization detector is known to have higher sensitivity and the signal magnitude is to a reasonable approximation proportional to the analyte concentration, independent of its identity. The samples were prepared as for the GC-MS analysis. The GC-FID analysis of the samples was undertaken with a Shimadzu GC-17A, system, equipped with a capillary column SGE-BPX5 (30 m, 0.32 mm i.d., 0.5 μ m film thickness). The carrier gas used was helium, the makeup gas was nitrogen, while hydrogen and air were used as ignition gases for the detector. The data system used was Shimadzu Class VP Chromatography Software. The method used was similar to that of GC-MS. Column temperature was initially kept for 1 min at 60 °C, gradually increased to 180 °C at a rate of 3.5 °C/min, and finally increased to 280 °C at a rate of 20 °C/min and kept there for 2 min. The injector and detector were set at 280 and 340 °C, respectively. The flow rate of the carrier gas in the column was kept constant at 1.0 mL/min, and the gas chromatograph operated in the split mode with a split ratio of 100:1. One microliter of the samples was injected manually, as for the GC-MS analysis.

Antibacterial Activity of Mastic Oil, Its Components, and Its Fractions. Three representative bacteria were selected for this study: Escherichia coli (Gram-negative rod), Staphylococcus aureus (Grampositive cocci), and Bacillus subtilis (Gram-positive rod). The 12 individual components of mastic oil tested were α -pinene, β -myrcene, p-cymene, β -caryophyllene, verbenone, α -terpineol, methyl isoeugenol, limonene, β -pinene, linalool, γ -terpinene, and trans-anethole. All of the above components were of the highest purity available (above 97%) and were obtained from Sigma-Aldrich Chemical Co. (Dorset, UK), with the exception of α -terpineol and trans-anethole, which were obtained from Fisher Scientific (Fisher Scientific, Leicestershire, UK).

The disk diffusion susceptibility method (11-13) was used in order to examine the sensitivity of the bacteria of interest toward mastic oil, its components, and its collected fractions. Essential oils and many of their components have limited solubility in aqueous media, and this property was expected to cause difficulty in susceptibility test methods. To overcome this difficulty, a modified disk diffusion method was also tried. In preliminary experiments to examine the effect of solubilizing agent on the diffusion of components through the agar, two sets of media were prepared: one without the presence of detergent and one with the presence of Tween 80 detergent. Mueller—Hinton (MH) Agar was used, prepared according to the instructions of the manufacturer (OXOID Ltd., Basingstoke, Hampshire, UK).

All agar plates were prepared in 90-mm Petri dishes with 20 mL of agar, giving a final depth of 4 mm. Overnight broth cultures were prepared in Bacto heart infusion broth which was prepared according to the instructions of the manufacturer (Becton, Dickinson and Co., Sparks, MD), appropriately adjusted in PBS (phosphate-buffered saline) or in Saline 0.9% in order to yield approximately 1.0×10^6 cfu/mL (colony forming units/mL). Whatman paper disks (Whatman International Ltd, Maidstone, UK) of 6-mm diameter were placed on the inoculated agar surfaces and were impregnated with 20 μ L of each chemical to be tested.

Standard antibiotics were used in order to provide a control for the sensitivity of the test organisms in the experiments. For each bacterium, two antibiotics (15, 16) were chosen as controls: for E. coli, gentamicin and tetracycline, and for both S. aureus and B. subtilis, gentamicin and vancomycin. Standard graphs for each antibiotic were prepared by testing paper disks containing varying amounts of the antibiotic against a standard organism. The concentrations of each antibiotic used for that purpose were 500, 200, 100, 50, and 10 μ g/mL (in 18.2 M Ω water). Each test was performed in duplicate and plates with and without Tween 80 were used for E. coli. Standard graphs for each antibiotic and each bacterium were prepared by plotting the logarithm of the concentration of the antibiotic versus the mean zone of inhibition, and a very good linearity was observed. The same procedure was followed for mastic oil, mastic gum, the mastic oil distillation fractions, selected standards (see below), and ethanol. Each sample (20 µL of the liquids and 20 μ L of a 30 mg/mL solution of the gum extracts) was applied to the paper disks, and they were tested on plates containing MH agar (without Tween 80).

RESULTS AND DISCUSSION

Chemical Composition of Mastic Oil and Gum. The oil, gum, and distillation fractions were analyzed by GC-MS using the method described above. Table 1 contains the identified peaks of fractions 1-4, along with their percentages, in comparison with those of mastic oil and of the ethanol-soluble components of mastic gum. GC-MS analysis of the oil and the gum led to the identification of the majority of the components, which are listed in Table 1 along with their semiquantitative data. A typical GC-MS chromatogram of mastic oil, obtained with the analytical method described above, is illustrated in Figure 1. The GC-FID analysis of mastic oil and gum showed no significant difference compared to that obtained by GC-MS. The identification of the components was based on comparison of their mass spectra with those of NIST12.LIB and NIST62.LIB libraries, as well as on comparison of their retention indices (17) and of the standard components analyzed (see Materials and Methods).

Table 1. Chemical Composition of Mastic Oil and Mastic Gum As Determined by GC-MS and GC-FID Analysis and Comparison of Their Chemical Composition with the Collected Fractions, Assuming That the Chromatogram Peaks Areas Are Proportional to the Concentration of Analytes

^a Percentages obtained by GC_FID. ^b Retention index relative to *n*-alkanes on SGE-BPX-5 capillary column (similar type to DB-5 capillary column). ^c Methods: GC, identification based on retention times of standard compounds on SGE-BPX-5 capillary column; MS, tentatively identified based on computer matching of the mass spectra of peaks with NIST12.LIB and NIST62.LIB libraries and published data. ^d An en-dash denotes that the percentage was below the limit of detection. ^e Less than 0.1%.

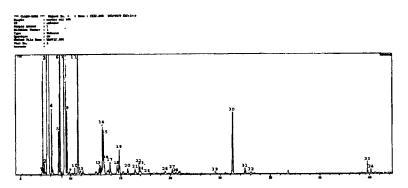

Figure 1. GC-MS chromatogram of mastic oil obtained with the method described previously.

The major constituents of the essential oil of *P. lentiscus* var. *chia* were α -pinene (63%), β -pinene (3.3%), β -myrcene (25%), limonene (1.5%), and β -caryophyllene (1%), assuming that TIC (total ion current) as integrated over the peak in the GC-MS chromatogram is proportional to their concentration in the sample. Other constituents therefore account for 6.2% of the total concentration. For the gum, the major ethanol-soluble constituents were the same, but the relative percentages differed

from those found in the oil: α -pinene (40%), β -pinene (1.5%), β -myrcene (9%), limonene (1.0%), and β -caryophyllene (5%). This difference is presumably due to the different ways the gum and the oil are produced.

As was intended, the distillation process separated the more volatile components from the less volatile ones. Fraction 1 has a similar chromatogram to that of mastic oil up to where verbenone (Figure 1) is eluted, although some peaks are more

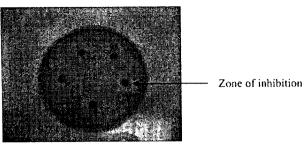

Figure 2. Zones of inhibition of *E. coli* against gentamicin on medium without Tween 80.

enhanced in the first fraction. The later eluting peaks of mastic oil either do not appear in the chromatogram of the fraction or they are very small. Fraction 2 is very similar to fraction 1, but some peaks are enhanced (e.g. β -myrcene, β -caryophyllene) and there is less of the major compound α -pinene. There is a clear enhancement of the later eluting peaks in fraction 3 (which was the first washing of the undistilled fraction) compared to mastic oil and fractions 1 and 2, which is consistent with the aims of distillation procedure. Fraction 4 is very similar to Fraction 3.

Antibacterial Activity of Mastic Oil, Its Components, and Its Fractions. E. coli and S. aureus were inoculated in agar plates with and without Tween 80, and several interesting observations were made: for E. coli, the growth of bacteria was quite similar on MH agar with and without the detergent, which indicated that the latter did not play a significant role. On the other hand, the addition of Tween 80 to the medium inhibited significantly the growth of S. aureus for reasons that were not clear. According to Carson et al. (14), the reduction in zone size observed when the detergent is added to the MH agar may be due to the Tween 80 allowing better distribution of components through the agar, resulting in a lower overall concentration. Alternatively, the Tween 80 may have enhanced the growth of the test organisms, as it is a source of oleic acid, or it could act as an antagonist to the oil components. Therefore, it was decided that plates containing the detergent would be used mainly in the disk diffusion tests with E. coli. As already mentioned, for that bacterium, there was essentially no difference between the detergent and nondetergent plates, suggesting that the solubility of the analytes was not the key issue in the different effectiveness of the analytes.

Figure 2 shows the Zones of Inhibition (Zol) of growth of *E. coli* against gentamicin on medium without the detergent around the paper disks impregnated with different concentrations of the antibiotic.

The results of the antibacterial assays for *E. coli*, *S. aureus*, and *B. subtilis* are reported in **Table 2**, along with the corresponding amount of antibiotic (gentamicin, vancomycin, and tetracycline) that would give the same zone of inhibition as the chemical. The calculation of the corresponding amount of antibiotic is based on the respective equation of graph when plotting the logarithm of the concentration of the antibiotic versus the mean zone of inhibition.

As seen in Table 2, all three bacteria are resistant to α-pinene, which is the most abundant compound of mastic oil (65%), and this is in agreement with literature reference (21). A variation in the antibacterial activity of the other tested chemicals against the three bacteria is noticed; $E.\ coli$ is resistant to β -myrcene, while S. aureus shows an intermediate response to that chemical and B. subtilis is sensitive to its presence. It should be noted that β -myrcene is the compound with the second highest percentage (25%) in the composition of mastic oil. p-Cymene, β -caryophyllene, methyl isoeugenol, limonene, γ -terpinene, and trans-anethole show only moderate antibacterial activity, and in some cases the bacteria are resistant to them. Furthermore, E. coli and S. aureus are resistant to β -pinene, while it inhibits only slightly the growth of B. subtilis. Verbenone (0.07%), α-terpineol (0.01%), and linalool (0.5%) are some of the trace components of mastic oil, but they show higher antibacterial activity than all other components, which is comparable to that of mastic oil itself.

A number of the fractions collected by microdistillation were also tested for antibacterial properties. Fractions 1 and 3 were chosen, since they were the ones that differed the most from a chemical point of view, and they were tested using the same procedure against the three bacteria. As observed in **Table 3**, fraction 3, which shows an enhancement of the later eluting peaks, has a stronger antibacterial activity than fraction 1, which, on the other hand, shows an enhancement of the earlier eluting peaks. It is, however, interesting that neither of them have the activity that mastic oil shows, although the antibacterial activity of fraction 3 is closer to that of the essential oil compared to the activity of fraction 1. This implies that the compounds that

Table 3. Zones of Inhibition of the Three Bacteria against the Fractions of Mastic Oil and against the Essential Oil

		ZoI (mm) of bacte	ria	
fractions of mastic oil	E. coli	S. aureus	B. subtilis	
mastic oil	12	18.5	17	
fraction 1	0	7	7	
fraction 3	6.5	10	11	

contribute the most in the antibacterial activity of mastic oil are the ones that appear in the middle of its chromatogram (e.g. verbenone, linalool, α -terpineol) and are clearly enhanced in fraction 3. This conclusion is in agreement with the observations made from **Table 2** and **Figure 1**. However, we cannot overlook the fact that many of the components of mastic oil contribute to its antibacterial activity.

Reasons for the effectiveness of mastic oil against the bacterium *H. pylori* are of particular interest, given the difficulties encountered in treating such infections. As *H. pylori* and *E. coli* are both Gram-negative rods, the observations made for mastic oil and *E. coli* may be relevant for *H. pylori*.

In conclusion, the antibacterial activity of mastic oil can be attributed to the combination of several components rather than to one particular compound. It is also interesting to note that different bacteria are susceptible or not to different compounds of the essential oil. So it can be assumed that the antibacterial activity of mastic oil against the bacteria tested is due to its cocktail of components, including some of the trace elements, not all of which have been identified in this study.

Passport to a Taste of Greece By New York's TOP RESTAURANTS Oct16-Nov18/2006

Chios Mastiha

Chios Mastiha, which most people might know as gum mastic, is a unique, appellation-of-origin product that is produced only on the island of Chios, in the eastern Aegean.

Chios Mastiha, a strange but beguiling crystal that flavors Greek cakes and breads, an ouzo-like liqueur, and a chewing gum is also used in making an impressive catalogue of potions and lotions that seem to be good for whatever ails you. It is salutary for all sorts of stomach ailments, including ulcers, and chewing it is good for the gums.

It is sold in many different forms. When used as a spice, it is probably best to buy the crystals, which keep their flavor as all whole spices do, and grind them according to need. The crystals should be

ground in a mortar with a pestle with the addition of a little salt or sugar, to keep them from sticking.

Roasted Red Peppers from Florina

These are long, fleshy, thin-skinned peppers from Florina and other northern Greek environs that are surprisingly mild when fresh, but change dramatically when grilled.

Grilled or roasted, the famed red peppers of Florina, in Northern Greece, impart a wonderful, sweet fragrance, one of the telltale signs of the rustic cooking of western Macedonia. Their robust flavor, ruby-red color and glossy sheen make them one of the most renowned local products. Greek food manufacturers now produce excellent quality grilled Florina peppers, put up either in brine or olive oil.

Giorgos Korres (photo), founder of the Korres line of natural cosmetics, discusses the origin and growth of his company, which is distributing its distinctively Greek cosmetics in some of the finest stores in the world.

Q: The cosmetic industry in Greece has radically changed during the last decade. What are some of the most significant differences between now and the early 1990s?

A: Being a member of the EU has enabled us to operate more effectively on a European level rather than being limited to a local level. On the one hand, we now have exactly the same laws and follow the same GMP regulations with the other European countries, and on the other, our scientists and our professionals have had the opportunity to prove that they can deliver quality of the highest level. Entering the Eurozone has also helped the industry a lot in that it is less complicated nowadays to present our products to other markets and build our business there.

Q: What are the activities of Korres in the domestic and international markets?

A: Having started in 1996, we currently list in Greece about 5.000 clients, exclusively pharmacies, throughout the whole country, even in small villages and islands.

In the international market we have expanded to more than 20 countries, and operate in the UK and the USA through our own subsidiaries. We already have two stand-alone stores, one in London and one in Barcelona. We are active in the USA, Canada, UK, France, Italy, Germany, Spain, the Netherlands, Austria, Switzerland, Cyprus, Kuwait, Dubai, Singapore, Hong Kong, Malaysia, Philippines, Thailand, Russia, Australia, and Colombia. To give you some insight into our distribution channel abroad, I would like to provide just a few indicative examples of stores that carry our products:

Bendel's, Fred Segal Essentials and Sephora in the USA: Harvey Nichols, Liberty, Selfridges and John Lewis in the UK; Le Bon Marché, Sephora, La Samaritaine and Galeries Lafayette in France; La Rinascente and Sephora in Italy; Ludwig Beck, Quartier 206, Apropos and Harald Lubner in Germany; De Bijenkorf and Parfumerie Louise in the Netherlands; Nana De Bary in Austria; SaSa and Joyce in Southeast Asia and Villa Moda in the Middle East.

Q:Korres has created a strong name in the "natural" market. What prompted you to enter this niche area?

A: I started working in Greece's oldest homeopathic pharmacy as a pharmacist in 1988 and took it over in 1992. It was for us the natural next step and was based on our experience with the use of the herbs in the pharmacy. We invested in a perfect laboratory for Homeopathic remedies and gradually created a clientele whose demands drove us to a wider variety of natural products. These products were so successful that friends of mine, also pharmacists, asked to carry them in their own stores, and that signalled the start of the company. Entering this field was not a marketing choice, but a self-evident step for us. Taking this direction, we have used our experience, our beliefs, the science, the technology, and our research to create products with herbs, offering the highest quality, fully avoiding mineral oil (petroleum derivative), propylene glycol, and silicones, and maintaining reasonable prices.

Q: What are the advantages of operating from Greece in the natural products area?

A: The Greek flora is absolutely unique and gives us a wide variety of herbs. We have already created a product range based on **mastiha**, a resin found only on a Greek island, in cooperation with the **Mastiha** Growers Association. There are also a lot of other Greek herbs and natural products focus on, such as the olive tree, honey, thyme, anise and others. We also work with the University of Athens in industrial research programs for the better study of herbs and natural products. And last, this great tradition in the use of herbs acts as our guide, supported by the science and technology available.

Q: Korres has also been very successful at packaging, design, and branding. How do consumers in international markets respond to natural products made in Greece?

A: For us, the response of the consumers, in a lot of different markets and different cultures, was a great and welcome surprise. It was really unbelievable to receive wonderful comments from places as far away as Oslo, Hong Kong, Sydney, New York, Cape Town, Moscow and Tokyo, regarding the products and the brand. It seems

that it was appreciated in the same way in many different countries. I am sure that sometimes it looks quite exotic to find a product from Greece in a store abroad, and other times it may be also intimidating, as you need a certain level of confidence in a brand to use this category of products.

But the total impression we have obtained through these years is that people highly understand what we are doing, they accept it and support it. Not just because it comes from Greece, but because of the qualities that the products carry. It is true that we have received several awards for the packaging and the design, which really help the first impression, but we have also been awarded prizes for innovation, manufacturing procedures, products, and I believe that the proper combination of quality, results, design, and pricing has given us the opportunity to be exposed so successfully in so many competitive markets.

Q: What kinds of opportunities do you see for cooperation by foreign investors in the Greek cosmetics industry?

A: It is absolutely certain that not one Greek company can really compete in the international cosmetics field without the help of investors, as the levels of the markets are different. Just think that Greece has a population of only 10 million. I am sure that foreign investors will find Greek companies of many professional fields—and not only in the cosmetics industry—that are professionally managed, with great scientists and great potential for growth under the proper synergies.

Korres: A Natural

Growth Story

USING NATIVE GREEK FLORA, AGE-OLD WISDOM, AND MODERN PHARMACEUTICAL RESEARCH, KORRES NATURAL PRODUCTS HAVE RAPIDLY CAPTURED BOTH GREEK AND INTERNATIONAL MARKETS

Launched in 1996, the Korres company uses scientific research to develop safe and beneficial products for skin and hair care. Naturally derived, top quality active ingredients are the basis for Korres products. The Korres company showcases the value of native Greek herbs and plants, supports local growers' cooperatives and has developed uniquely Greek products with an international appeal. As a result of working with the Chios Mastiha Growers Association, the Korres company developed the product line, Korres Greek Flora - Mastiha, based on mastiha, a resin unique to the mastic trees (Pistacia lentiscus var. chia). Korres also supports the high quality organic Red Saffron grown by the Saffron Cooperative in Kozani in northern Greece. Long prized for the unique flavor and deep yellow color it lends to foods and beverages, saffron also has significant antioxidant and anti-inflammatory properties that the company intends to highlight. Korres products are sold at stand-alone stores or through other distribution channels. In Greece, the products are available in more than 5,000 pharmacies throughout the country, and in two new stores in Athens, one in the elegant new Attica department store, and the other at the Athens International Airport. Korres products are sold in twenty countries around the world, including the U.S., Canada, U.K., France, Italy, Spain, Switzerland, Kuwait, Dubai, Australia, Singapore, Hong Kong, Thailand and the Philippines. Points of sale in the U.S. include such well known beauty supply stores as Sephora, Henri Bendel, Flight OO1, and Beauty Collection. The newest Korres company venture in New York is the launch of a shop-in-shop at the unique concept store, Emerge NYC. Korres products are the only skin and personal care brand being sold there. The Korres company's great success and excellent quality has attracted many investors who are eager to carry Korres products or open stores around the world. The company's rapid growth has enabled it to invest in new production facilities on a 7,500 square-meter property in an industrial area outside Athens. This larger facility will enable the company to expand its product range, address new market needs, and begin producing its own herbal ingredients.

The company's newest beauty products, the Korres Color line, will feature about 70 color products, ranging from foundation, powders to lipstick and mascara. Korres is also branching out by creating nutritional food products with the collaboration of Stelios Parliaros, the popular and award-winning Greek confectioner. This newest line will kick off with a fig, prune, and honey jam.

Points of sale in the U.S. include such well known beauty supply stores as Sephora, Henri Bendel,

Flight OO1, and Beauty Collection.

Natural Greek Chios Gum Mastic 100g Box 100% natural product.

This auction is about an unopened 100g Box of Mastic Resin, produced by the Chios Gum Mastic Growers Association. (Original product Guaranteed.).

A unique product with many beneficial qualities and wide-ranging uses since antiquity. Nowadays, it is used in pharmaceuticals, perfumes, cosmetics, beverages, bakery goods, sweets as well as in cooking. Mastiha is the natural resin of pistacia lentiscus var. Chia, a tree which grows only on the Aegean island of Chios, Greece.

Mastiha, having travelled along the trading routes of the East, constantly changing uses and forms, now introduces itself to a wider audience that is sensitive to environmental and organic issues and seeks an "experience" out of the ordinary things of every day life.

*Mastiha stands for the Greek name of mastic gum(or Skinos in Ancient Greek).

History

In ancient times well known greek and Roman doctors like Hippocrates, Galen, Dioskurides and later on other Greek and latin doctors, studied the beneficial pharmaceutical attributes of "mastiha resin". Great historians like Herodotus, Diodorus Siculus and Plinius have recorded numerous references and information on various uses of mastiha in ancient Carthage, Egypt and Arabia.

In Roman times, Emperor Heliogavalus for the first time blended mastiha essential oil (mastichium oleum) with wine and produced "masticatum". The ladies of the aristocracy in Rome as well as the women of the harem later on in Constantinople, used toothpicks made from wood of the mastiha tree as a teeth whitener, a practice that continued until the Midle Ages in France, England ,Holland and Spain.

During the Byzantine period, mastiha held one of the highest places on the list of the exported luxury goods, bringing an income of 120,000 coins to the island 's Imperial Commander.

The island's Genoese occupation (1346-1566 AD.) marked a new era in mastiha trade. The restless Genoese traders systematically organized and tightly controlled the trade of the precious resin, bringing mastiha to the big markets of the East as well of the West. Mastiha gained prestige and traveled to the major cities of the famous trading routes of the times: Yerevan, Rhodes, Cyprus, Damascus, Alexandria, Proussa, Odessa, Bagdad, Venice, Pisa, Florence, Trieste, Marseille, London ... cities where various people, cultures, religions, customs, flavors and aromas coexisted in a colorful setting.

In the period of the Ottoman Empire the island of Chios was self-ruled, emjoying special privileges only beacouse of mastiha. The finest quality mastiha of the year's harvest was sent to the Sultan in Constantinople for the 300 ladies of his harem.

Nowdays, mastiha continues its voyage in time in multicultural and colourful area of the Eastern Mediterranean, bringing closer different people and cultures, exchanging exlriences and beliefs. It is exactly this area, these people and this mosaic of cultures that mastiha reflects in its ever changing forms and uses, making life 'sweeter' either as a spice or as a medicament.

Pharmaceutical and Cosmetic attributes of Mastiha

Hippocrates, Greek physician(460-377 B.C.), known as the "Father of Medicine", in his work Galen (78,603) reports:

"...the inner part of the resin, when mixed with honey, can be chewed as well as

an ointment for the nostrils (for disorders of the nasal mucosa)...'

Dioskurides (100 A.D), a doctor and a herbalist from Cilicia, has an extensive reference on mastiha in his work De Materia Medica which was extensively used up to the 16th century A.D.:

"...the mastiha tree roots, its bark, its leafs and its fruits, they all have therapeutic attributes. Mastiha has anti-thrombotic properties, prevent dysentery and uterine bleeding and helps preserving a good bone mass. It has diuretic properties and its essential oil is antiseptic.

...mastiha resin is extremely good for the stomach, helps digestion and teeth whitening..."(de Materia Medica, 1,70)

in addition, Dioskurides, who owned a pharmacy for about 35 years, emphasizes the beneficial effect of mastiha in cosmetic and oral hygiene.

"... mastiha cleanses deeply the skin, making it radiant and shinning and it helps to thicken the eyelashes... mastiha refreshes the breath and helps to keep healthy gums..."

After Hippocrates and Dioskurides, some other brilliant scientists of the time such as Rebasius, Soranos the Ephesian, Etius Medicus, Scibonius Largus and others, suggested numerous remedies with mastiha and other herbs.

Recent studies conducted in the University of Nottingham reveal that even in small quantities (1gr per day, for a period of two weeks) mastiha can cure peptic ulcers caused by Helicobacter pylory. In adition, extensive research has been carried out on the activity of mastiha's essential oil. It indicates that this oil has a significant anti-microbiological activity, a positive effect on cardiac conditions, a healing activity against peridonitis, esophagitis, colitis and other inflammatory conditions. This scientific information has sparked a widespread interest in mastiha and its essential oil and has encouraged its use in the pharmaceutical and cosmetics industries.

Mastiha has been well known for its therapeutic attributes since antiquity. The most famous doctors of the time systematically studied mastiha's medicinal properties and extensively used it in various pharmaceutical preparations.

BUSINESS

Sticky business

Harry Papachristou | Athens, Greece

17 November 2004 12:00

Ancient Greeks knew it as a cure for bellyaches. Roman emperors used to spice their wine with it. And Turkish Sultans' harem ladies chewed it for fresh breath and fighting boredom.

Mastic, the aromatic resin produced by a small, eponymous evergreen tree that grows around the Mediterranean sea, has been a big hit for more than 2 000 years. Armies of Roman, Byzantine, Genoese and Turkish merchants carried the natural chewing gum from the Greek island of Chios to the great trade capitals of the world.

To this day, Chios inexplicably remains the only place on earth where mastic trees produce resin as plentiful and pure. But only recently did local producers find out what it takes to sell "mastiha" (pronounced "masteeha") in the modern, brand-driven marketplace.

"Producers just didn't know how to present the product to people who don't know about it. Growers tried to present mastiha's various uses at commercial fairs, but these attempts always bordered on the rustic," said Yiannis

Mandalas, a young Greek manager who runs mastihashop, a start-up retail chain for the resin's various products.

The thick, transparent, sticky liquid has multiple uses. In the Middle East mastiha adds spice to local cuisine and pastry. The French buy its distilled oil for perfumes and firms in the United States apply it in bandages, pharmaceuticals and varnishes.

Sales took an initial blow in the 1960s when nationalist regimes in the Middle East, the biggest market, insisted on prohibitive trade terms. Adulterations with lower-grade resins abounded and continue to this day. Synthetic substitutes started crowding out the product in the industry. And the labour force shrank as young

men from the 22 villages in southern Chios where the mastic tree grows increasingly turned their backs on the fields, lured by tourism and shipping.

In the late 1990s, the producers pulled their act together, got a business-minded management team and set out to conquer new markets, said Constantine Ganiaris, president of the Chios Gum Mastic Growers Association (EMX) which has about 6 500 members.

"This year, we expect to break the annual production mark of 150 tonnes for the first time in 20 years," he said.

Mastihashop is a key initiative to expand the retail market. The shops try to attract customers by evoking the leisurely, sensual Eastern Mediterranean culture.

Wrapped up in packages evoking nostalgic images of the 19th and early 20th century, mastina-based spices, alcoholic drinks, cookies, chocolates, Turkish delights, oils and perfumes from Greece and Turkey dominate the shelves in mastinashop's downtown Athens branch. Japanese mastina-toothpaste and nutritional supplements round up the multicultural picture.

"Mastihashop is basically a lifestyle grocery... it would be a mistake to become just a Greek shop," said Mandalas.

The fist mastihashop opened in the summer of 2002 on Chios and was a runaway success, Mandalas said. "We broke even after 72 days.

The shop is earning us around 600 000 euros a year," he said.

Planning to set up masthihashops in Cyprus, Beirut, Jeddah and Dubai is under way. Wealthy Chios ship owners with property in New York and London are offering commercial space for expansion there.

Technology-driven mastiha collection methods were dropped to safeguard the product's traditional image. Mastic is still collected the old-fashioned way: farmers prick mastic trees in high summer. The outpouring resin is left to dry on the tree trunk, branches and surrounding soil and is collected in mid-September.

Other commercial agreements include the first-ever professional sales pitch for mastiha-based, Chios chewing gum Elma by Greek food major ELGEKA. The firm expects the deal to generate 6,5-million euros a year.

And EMX is widely expected to make a foray into the nascent Japanese market on the back of a Greek retailer.

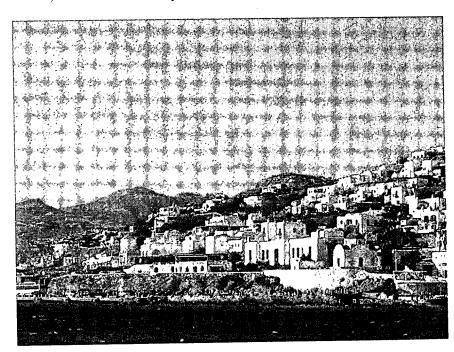

Results are already showing. "Young people are returning to the fields. Mastiha is one of the very few agricultural products the price of which has risen," Ganiaris said. - Sapa-AFP

All Things Greek

Years ago, towards the end of a long year spent in Europe, a group of us decided to take a "last-hurrah" trip to Greece. Hearing that Athens was "too crowded and polluted", we were told that the Greek islands had more in store for us. Landing in Mykonos on a hot August day, I immediately agreed.

One of the first things you notice about Greece is the landscape. The deep blue water is contrasted along side stark white architecture, a reddish brown hillside and of course, a cloudless blue sky.

One of the next things you notice about Greece is that although the beautiful culture and country both date back thousands of years, it is still one of the most desirable vacation spots for a lot of Europeans and some pretty lucky Americans. The allure, charm and hospitality of Greece never ceases to intrigue and captivate.

With hundreds of memories stored away from my week spent indulging in endless slabs of feta and soaking up as much sun and culture as I could, to this day I have an affinity for all things Greek.

So when I discovered <u>Korres Natural Products</u>, you can imagine that it was like traveling back in time, to that week spent amongst Grecian gods. This line of skin and hair care products to me represent what Greece is about: pure and natural ingredients, some found only in Greece, mixed with the needs of a modern American girl.

For example, **Mastiha** is an essential oil found in a tree native to Greece, that as antimicrobial and healing properties. Korres uses **Mastiha** instead of mineral oils and silicones, in an ongoing effort to create the most natural, healthy and quality products available.

Just as Greece played host to me 8 years ago, I love that this country has etched out a place in my heart once again. Having a bathroom filled with Yogurt Body Butter, Yellow Hibiscus Eye Serum, Sweet Orange Sunscreen, Olive Stones Natural Scrub and a Sugar Crystal Multivitamin Skin Shield for the winter months to come makes me the happiest I've been since Greek-island-hopping.

MASTIHA—ANCIENT FOOD, HEALTH & BEAUTY SECRET—IN U.S. SPOTLIGHT

Americans Discovering Precious Crystalline "Tears" From Greek Isle of Chios

NEW YORK, December 14—A first-ever seminar on the culinary, health and cosmetic uses of Chios Mastiha introduces chefs, healers and beauty experts to this ancient ingredient.

The French Culinary Institute in Manhattan is the venue for a series of two-hour presentations on the mystical ingredient Mastiha, the product of mastiha trees that grow only in the South part of the Aegean island of Chios. For nearly four thousand years, the resinous crystals of Chios Mastiha have been used in Mediterranean foods and beverages ranging from chewing gum to confections to liquor, while its proven anti-inflammatory and anti-microbial properties make it a key ingredient in herbal remedies. In cosmetics, Mastiha has for millennia been used in soaps, perfumes and essential oils.

Today, the consortium of producers known as the Chios Mastiha Growers Association is launching a campaign to educate American chefs, healers, beauty experts and consumers on the myriad uses of this all-natural product. The awareness campaign begins with a series of professional seminars and builds to the grand opening in late spring 2007 of a Manhattan retail store that will feature food, health and personal care products containing this wonder ingredient.

"Mastiha is the original functional food," said John Mandalas Commercial Manager of CMGA. "For thousands of years people have relied on Mastiha to improve their health, their beauty and their pleasure. It's time for Americans to discover what we Greeks have known forever."

More...

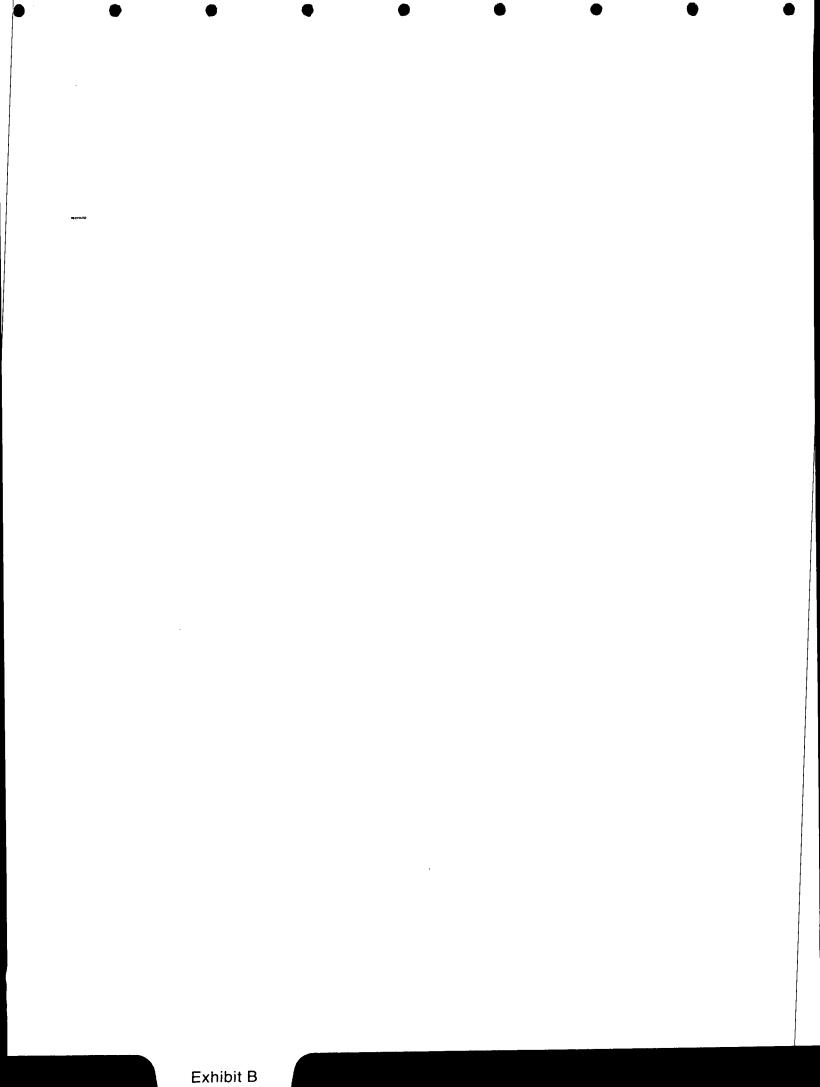

Americans Discover Mastiha From Chios, page 2

Mastiha is produced from the mastiha tree (Pistacia Lentiscus var. Chia), cultivated only in the South part of Chios Island, at the East part of Greece. Growers use a sharp, pointed tool to incise the trunk and branches of the tree, which oozes a thick, clear liquid that, in two or three weeks, hardens into crystalline "tears" and drop to the ground.

The resinous granules are gathered by local villagers, hand-washed and turned over to the Chios Mastiha Growers Association for sorting, grading and distribution. Chefs, use it in a wide range of products, including baked goods, sweets, preserves, ice cream, chocolate, beverages, pasta, and sauces, among others. Chios Mastiha is also widely used in oral hygiene products, surgical sutures, compresses for burns, and as a dietary supplement and treatment for digestive disorders. The cosmetics industry uses Chios Mastiha in soaps, cosmetics and scented oils. The aphrodisiac properties of Mastiha are legendary.

Compulsory Law No. 1390 of October 8/10 1938. About Chios Mastiha Growers Cooperative and about some provisions "for agricultural cooperatives" [Offic.Gov. Gaz, b. A', p. 364]

Article 1.To the purpose of the protection of Chios Mastic through the systematization of the production, gathering, packaging, elaboration and its common distribution, the compulsory cooperative organization of all the Chios Mastic growers is herewith imposed.

Article 2. Into the district of each one or more communities of the Chios mastic villages is established one cooperative of limited liability to which are inscribed as members all the adult mastic owners, or planters, or beneficiaries, or tenants, or tenant-farmers of mastic-tree. Minors are represented through those that have the parental control, from the other side whoever can not administer his property (is represented) and are registered as associates under this capacity. Those who have mastic-trees as above in the district of several cooperatives, are not compulsory made associates to every such but to one only.......

Article 8. Towards accomplishment of Article's 1 aims, the cooperatives, which are established in accordance with the above-mentioned, are compulsory united into a union with seat at Chios under the title "The Chios Mastiha Growers Cooperative". — The constitution of the union following the approval of the commission of Article 3 of the present, is approved by a decision of E.S.S.E., which is published in Official's Government Gazette. The cooperative is governed by a nine members board of directors, consisting of three permanent and six elected members.

Article 10. The Union, in order to fulfill its aims, carries out every action in order to protect the cultivation and trade of the product.

More particularly: a) Obtains loans and grants them to its members.

.....

- b) Obtains warehouses or roofed places for housing and packaging of the
- C) packages and sells on behalf of the cooperatives the mastic which is delivered to it, and may give down payments up to 3/4 of its value.
- D) Obtains installations on behalf of its members for the industralisation of the mastic and sells the products or by-products of the industralization.
- E) takes care for the balance between supply and demand of mastic and makes advertisements for taking care of finding new markets and ways of increasing the consuming of the product.
- F) Acts on behalf of the co-partners and under their declaration of provision of useful products for their cultivating needs.

Article 11. All members of the cooperatives are obliged to deliver all their mastic production to the cooperative, to which they belong, and through this to the Union– Exceptionally it is permitted to each producer to retain from his production up to two okades (1.282 grams x 2) for the purpose that this amount is used for personal domestic use. The way of delivery and receipt of the mastic is decided by the Union of the cooperative or. – Every associate,

who is not complying to the above, pays penalty equal to the value of the non delivered mastic, imposed under decision of the board of directors. Towards the decision of the board of directors an appeal is allowed to the supervising board of directors which decides irrevocably. - Members of the board of directors are responsible to the Union for every negligence concerning the enforcement of the dispositions of the previous paragraphs. - Starting four months after the entering into force of the present traders, who buy directly from producers any amount of mastic, are persecuted after complaint of the Union and are punished by the competent District court with monetary penalty of one hundred and fifty drachmas for every oka of mastic purchased. After relapse the penalty is doubleb. The said deadline can be extended to one year after the decision of the supreme council of agricultural cooperatives and the opinion of the board of directors of the Union. The product delivered according to the provisions of the law, either to the cooperative or for consuming, must be completely clear and free from every foreign substance. -To the responsible who mixes the product, monetary penalty is imposed, after complaint of the one suffering damage or the Union, from the competent court to thousand two drachmas.....

The above constitutes an exact translation from Greek into English of the attached document.

KATASTATIKO

Της Ένωσης Μαστιχοπαραγωγών Χίου (Σύμφωνα με τις διατάξεις του Ν. 2810/2000)

ΚΕΦΑΛΑΙΟ ΠΡΩΤΟ

ΓΕΝΙΚΕΣ ΔΙΑΤΑΞΕΙΣ

Άρθρο 1

Σύσταση - Επωνυμία - Έδρα

1. Σύμφωνα με τον Α.Ν. 1390 της 10^{ης} Οκτωβρίου 1938 « Περί Ένωσης Μαστιχοπαραγωγών Χίου κλπ» όπως τροποποιήθηκε με τον Νόμο 142/1945 και τον Α.Ν. 1154 της 28/3/1938, ιδρύθηκε το έτος 1938 δευτεροβάθμιος Συνεταιριστική Οργάνωση όλων των Συνεταιρισμών Μαστιχοπαραγωγών Χίου που διέπεται από τις διατάξεις του παρόντος Καταστατικού και τις Νομοθεσίες για τις αγροτικές Συνεταιριστικές Οργανώσεις.

2. Η Ένωση Μαστιχοπαραγωγών Χίου θα λειτουργεί με την επωνυμία «ΕΝΩΣΗ ΜΑΣΤΙΧΟΠΑΡΑΓΩΓΩΝ ΧΙΟΥ ». Για τις συναλλαγές της Ένωσης με το εξωτερικό, θα χρησιμοποιείται η επωνυμία της Ένωσης σε πιστή μετάφραση σε οποιαδήποτε γλώσσα. για την μεν Γαλλική " UNION DES PRODUCTEURS DE GOMME MASTIC DE CHIO" για δε την Αγγλική " THE CHIOS' GUM MASTIC GROWERS ASSOCIATION". Ο διακριτικός τίτλος στην αγγλική θα είναι " CHIOS' MASTIHA GROWERS

ASSOCIATION"
Στο παρόν καταστατικό, για συντομία η Ένωση Μαστιχοπαραγωγών Χίου, θα αναφέρεται στο εξής με μόνη την λέξη «ΕΝΩΣΗ».

3. Έδρα της Ένωσης ορίζεται ο Δήμος Χίου, όπου είναι εγκατεστημένη η διοίκησή της.

Η Ένωση για την πληρέστερη εκπλήρωση των σκοπών της, μπορεί να ιδρύει παραρτήματα, μέσα στην Περιφέρειά της. Μπορεί επίσης, με απόφαση του Διοικητικού Συμβουλίου, να ιδρύει υποκαταστήματα και πρακτορεία ή να εγκαθιστά αντιπροσωπείες, όπου κρίνει σκόπιμο ή όπου υπάρχει ανάγκη ανάλογα με τις συνθήκες τις αγοράς στο εσωτερικό ή το εξωτερικό.

•

Αρθρο 2

Law 4381 of August 13/16 1929, Protecting measures of Chios Mastiha

Article - 1. The embroidery of the brushes and the collection therefrom of the Chios mastic before July 15th and after October 15th of each year is prohibited. The last date may be extended for a fortnight after a Prefect's permission.

- 2 The collection of the "kokologi" is also forbidden.
- 3 The planting of new bushes is allowed only after a Prefect's special permission and payment of 1000 drachmas per 1000 m2 to the relevant community fund.
- 4 The renewal of the old or drained bushes is allowed without payment.
- 5 Anyone not complying with the provisions of the present law is liable to a fine of 500-3000 drachmas as well as personal detention of 5-20 days. The same punishment is inflicted on any trader who has under his possession the least quantity of the species "kokologi".

Legislative Decree 48/1968/A-294 Measures for the increase of the chios mastic production

Article 1

1. Any proprietor or possessor of mastic trees having any real right, is obliged until the April 30th of each year to file in the respective Cooperative of Mastic Producers a written statement in which he will declare the mastic trees that are under his possession and on the other hand, whether he is going to cultivate them himself or through tenant, who will be named. In the second case, the statement will also be signed by the tenant.

Article 2

...........

The mastic trees which are grown in the island of Chios for which there has been filed a Statement that they are not going to be cultivated by their proprietors or possessors themselves or by a tenant as well as the trees for which either the filing of the Statement, according to the article 1 of the present, was omitted or were not cultivated, despite the Statement was filed by the one who owns, are compulsorily removed by virtue of the present, in accordance with the above mentioned.

Article 3

Any person whishing to rent mastic trees for cultivation must submit each year and, until the end of April 30th, a Statement to the relevant Cooperative of Mastic Producers defining the number of mastic trees that he intends to cultivate

The above constitutes an exact translation from Greek into English of the attached document.

Date:28-9-2003

The Chios Mastina Growers Association

On plan is the creation of Mastixashop in markets abroad

Outside the Greek borders is channelled the 70% of the yearly production of mastiha, thus making <u>The Chios Mastiha Growers Association rank amongst the most dynamics</u> and profitable cooperative organizations in Greece.

Cashing the <u>fame and the quality of the products that the Union (Association) produces</u> - it is stated that its products are Protected Denominations of Origin, whereas from 2001 following the needs of the modern economic environment the Organization was certified by ISO 9001 - it created <u>last July the first mastihashop in Chio and the second in Athens in May of 2003.</u>

After the success that these shops have made, it aims to the expansion of **mastihashops**, in Athens and Thessaloniki within 2003 but also in abroad with priority the Eastern Mediterranean region which is identical with the historic markets of mastiha.

Already from last year it is programmed the operation of the first **mastihashop** outside the Greek borders in Cyprus, whereas in the business plan for the next 5years —total budget 10 million euro—it has already been decided that 3 million euro will be given for the further enhancement of the network of shops inside and outside the Greek frontiers. Markets where it is considered to create **mastihashop** are the historic markets of mastic, as in Constantinople, Alexandria, Beirut, Dubai etc. It is worth mentioning that it is not excluded that mastihashop will open in the period of 2004-2005 also in New York where there is great interest.

Today the greater part of exports of the Union is channeled to <u>Egypt</u>, <u>Saudi Arabia</u>, <u>Syria</u>, <u>Lebanon</u>, <u>United Arab Emirates and Turkey</u> whereas exports are also made in countries of the western Europe, such as <u>Germany and France</u> - which offers the quantities of its imports to Algeria, Morocco and Tunis.

Exports are also made to the <u>US markets and of Canada</u> countries which import around 8-10 tones per year, as well as the <u>Japanese</u> market, where 3 tones are channeled yearly, where certain increase have been mentioned.

It is stated that the Chios Mastiha Growers Association which has multiplied by 10 its profits for the last 3 years completed the first phase of its reorganisation, creating the qualifications for profitability and having materialize three investments that have to do with the modernisation of the chewing gum and mastic factory, as well as the creation of the museum for mastic.

Special mention must be made in the aspects of the business plan, that aim in the gradual transformation of the mastic region of the island into a biological cultivated and the transformation of the Chios Mastiha Growers Association and its subsidiary companies into ecological organisations, with ultimate goal the incorporation of social responsibility into the co-operative company's procedures and operations.

Today the main activities of the union have to do with the complete support of the producers and the cultivation of mastiha, the process, cleaning and packaging of natural mastic, the production and commerce of mastic products (ELMA chewing gums, mastic oil etc) and the development of a network of **mastihashop**.

The above constitutes an exact translation from Greek into English of part of the text in Greek of the attached document.

Dec. 6, 2006 --

Ice cream that tastes like Christmas trees? That's what the staff of "Good Morning America" thought before trying Chios Mastiha ice cream on Wednesday morning's show. Chios Mastiha is derived from the sap of a tree found on the Greek island of Chios; the tree is thought to have healing properties.

• To try the ice cream for yourself, vsit the New York Greek restaurant Ammos Estiatorio located at 52 Vanderbilt Ave. and 45th Street. For more information about the restaurant, go to its Web site at:

http://www.ammosnewyork.com/

Q: Brand name of Greek skin care line (Answered ****, 0 Comments)

Question

Subject: Brand name of Greek skin care line

医电影 医克格里 经分

Category: <u>Health > Beauty</u> Asked by: **murphie2-ga**

List Price: \$5.00

Posted: 25 Aug 2004 14:37 PDT Expires: 24 Sep 2004 14:37 PDT Question ID: 392582

What is the name of the skin care line made in Greece that Katie Couric did a spot on the Today Show, today, (Wednesday August 25th). It is a luxury brand made with "masticha" from one of the Greek Islands.

Request for Question Clarification by <u>jackburton-ga</u> on 25 Aug 2004 15:32 PDT

"Mastic Spa" series (Sodis Laboratories) http://www.masticspa.com/welcomeEN.htm

... Is this the one?

Clarification of Question by murphie2-ga on 25 Aug 2004 18:01 PDT

No. That's not it.

Request for Question Clarification by pinkfreud-ga on 25 Aug 2004 18:22 PDT

Could this be the line of skin care products you're seeking?

"KORRES GREEK FLORA mastiha

Korres natural products, in cooperation with the Chios Mastiha Growers Association, has developed a special product line, based on the invaluable resin called Mastiha.

Mastiha is the resinous, aromatic extract that comes from the trunk and the thickest branches of the mastiha tree (Pistacia lentiscus var. chia). The mastiha tree, indigenous to the Mediterranean islands, only thrives in the south part of the Greek island of Chios, due to the mild climate and the characteristics of the soil."

http://www.korres.com/

Clarification of Question by murphie2-ga on 26 Aug 2004 07:22 PDT

pinkfreud, that's the one. Thanks!

I'm glad I was able to find the Greek skincare line that you were looking for.

"KORRES GREEK FLORA_mastiha

Korres natural products, in cooperation with the Chios Mastiha Growers Association, has developed a special product line, based on the invaluable resin called Mastiha.

Mastiha is the resinous, aromatic extract that comes from the trunk and the thickest branches of the mastiha tree (Pistacia lentiscus var. chia). The mastiha tree, indigenous to the Mediterranean islands, only thrives in the south part of the Greek island of Chios, due to the mild climate and the characteristics of the soil."

Korres
http://www.korres.com/

Korres mastiha products are available at the MastihaShop in Athens, and there are plans for other MastihaShops:

"Mastiha Shop

Panepistimiou 6 & Krizotou, Historic Centre (210 363 2750). Metro Syntagma.

Open 9am-9pm Mon-Fri; 9am-5pm Sat.

Credit MC, V.

Just about everything you can imagine made with the famous mastic gum from southern Chios, which is said to be a panacea for all ills, from stomach ulcers to cancer. Whether you wish for mastic chewing gum, sweets, essential oils, candles, beauty products or just a book about Chios island, this is the place to find it. Don't miss the line of natural cosmetics made by Korres especially for the Mastiha Shop."

TimeOut: Athens Shops & Services http://www.timeout.com/athens/shop/9.html

"At the Mastihashops, the range of products is constantly getting broader. Currently, visitors to the shops will find a variety of products, ranging from Korres natural products based on mastic (exclusively produced for Mastihashops, these include their Mastiha and natural clay mask, Mastiha body butter and Mastiha oil and avocado night creams); a series of Mylelia products - the organic food company is also working on a series of new products such as tyrokafteri with

mastic; Turkish delight, natural soaps with or without essential oils, kourabiedes, ouzo, liqueurs, fresh juices (kept in freezers), homemade cookies and sweet rusks, as well as books and engravings."

Chian Federation Forum
http://www.chianfed.org/mos/component/option,com simpleboard/Itemid,31
/func,view/id,10/catid,4/

"The first mastihashop was launched on Chios' bustling port in July 2002 with an Athens branch following about a year later. A Thessaloniki store will open soon. Now the company is looking to expand abroad, at 'a surprisingly rapid pace' according to Mandalas. One or two new shops will open by next year in countries that already have a taste for mastiha in the Eastern Mediterranean, North Africa and the Arab world...

At the two mastihashops, traditional items and snazzily-packaged new ones (from pharmaceuticals to Korres natural cosmetics) are found in neat, contemporary interiors."

GreeceNow: Viscous Success
http://www.greece.gr/BUSINESS/BusinessDirectory/hios.stm

It appears that the Mediterra MastihaShops website is under construction. There is some contact information on the front page, including a fax number and an email address:

MEDITERRA A.E. Fax: 22710 26700

e-mail: info@mastihashop.com

Mediterra MastihaShop http://www.mastihashop.gr/

Sephora carries many products from the Korres line, but not the ones containing mastiha. Possibly Katie Couric's mention of these products will have an influence on the online availability of mastiha skincare.

Google search strategy:

Google Web search: "korres" + "mastiha" ://www.google.com/search?hl=en&ie=UTF-8&q=korres+mastiha

Best regards, Pinkfreud

Passport to a Taste of Greece By NEW YORK'S TOP RESTAURANTS Oct16-Nov18/2006

A Section of the Contract of t

ATaste of Greece is a first for Greek cuisine in New York City, a citywide culinary festival embraced by New York's top Greek and American chefs and restaurants.

Inspired by the unique flavors of Greece, by the country's exquisite raw ingredients, and by the convivial nature of Greek cooking, 25 top restaurants have joined forces to create their own Greek and Greek-inspired plates and to highlight Greece's superb raw ingredients and wines on their menus.

From bar food to desserts, Greek food is hot in New York this month.

A Taste of Greece caps a year of Greek cuisine promoted internationally, via a worldwide campaign called Kerasma (KE-raz-ma), which means treat in Greek, something savory and tasty to offer a guest. These treats, a whole range of plates big and small, are the Greek way of conveying friendship and hospitality. From the era of ancient symposia to modern restaurant times, with Greek food

03

is both homey and haute, Greeks have always known how to make people feel welcome and at ease. It's always been through food, wine and spirits, such as ouzo. We've always been hosts par excellence.

So, enjoy some Greek hospitality by savoring a Taste of Greece by New York's Top Restaurants and sampling the creations of the city's best chefs as they work with some of our most unusual spices, such as Chios Mastic and Greek saffron, incorporate our enormous range of cheeses into their cooking, drizzle our excellent extra-virgin olive oils over everything from bread to fish, and pour our wines, so many of which are produced from unique, local Greek grapes.

Kali Orexi! That's Greek for Bon Appetit! The Hellenic Foreign Trade Board

09 All About Greek Ingredients

Greek Extra-Virgin Olive Oil (EVOO)

Most of the olive oil produced in Greece is extra virgin by nature, thanks to the country's predominant oil olive, the Coroneiki, and to the care and pride with which farmers tend their trees, harvest their fruits, and extract their oil. Greece is the third largest producer of olive oil in the Mediterranean and the first in consumption.

The olive variety and terrain, among other things, help shape the final taste profile of an olive oil.

WHAT TO LOOK FOR

Peloponnese Coroneiki olives generally impart a deeply herbaceous tone to the olive oils produced from them. EVOO from the southern Peloponnese, Kalamata and the Mani. When made with pure Coroneiki olives these oils tend to be robust, with plenty of grassy tones, bitter almond skins and spicy pepper. Oils from Messinia, also in the Peloponnese, are sometimes made with a mixture of Coroneiki and two other varieties, the local Manaki and the Athinolia, which result in a lighter oil, with more citrus and nutty tones.

Further south, down the Mani peninsula, the Coroneiki olives offer softer, gentler oils but still with those characteristic herbaceous tones. This is a remote area which sticks to traditional methods and many of the oils are certified organic.

Over the Taigetos mountains, Laconia offers more first-class oils with three PDO regions and a more general PGI (Protected Geographical Indication) for the whole region. The Greeks themselves praise the sweeter oils of Lygourio and Kranidi, also PDO areas, in the eastern Peleponnese, where the Manaki olive is dominant. These oils offer subtle aromas of apples and citrus fruits with only a touch of bitterness and pepper.

Islands

Crete leads the islands in production and international presence. The two best known regions are situated at either end of the island at Kolimvari in the west and Sitia in the east. Most production is in co-operatives but there are also a number of smaller producers who press excellent oils. Coroneiki dominates here as it does on the mainland but there are some local varieties such as

Tsounati in Chania, Throumbalia in Rethymnon, and Hondrolia in Heraklion and the taste and flavors of the oils are quite varied.

Olive oils from Mytilene, which is the island of Lesvos are also much admired.

Kalamata

& Other Greek Olives
Most consumers recognize Greek
table olives either by their place
names (Kalamata, Atalanti, Amfissa,
Halkidiki, etc.) or by their curing
and processing (cracked, split, saltcured, brine-cured, etc.)

While there are dozens of "different" kinds of olives, only three main varieties are commercially important as table olives. The confusion starts here - these few types of olives just happen to come in many sizes, and from many different parts of Greece, so that

they all look different and are all called by different names.

All olives change from green to black as they mature, and all are bitter and inedible unless cured. Depending on the variety and the curing method, some olives are processed unripe, or green, while others are left to mature and darken on the tree. Others still are purposely harvested late, when their skins are leathery and wrinkled.

Following is a list and brief description of Greek table olives as they are most commonly called at the market.

Ol. Kalamata

The king of Greek table olives and one of the best-known olives in the world. Kalamata olives are shiny,

brownish-black, tight-skinned with a characteristic "almond" shape. The Kalamata is the most highly prized black olive, and it usually slit on two sides and preserved in vinegar and/or olive oil.

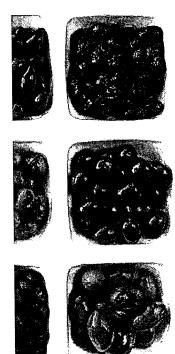

02. Olives that are recognized under the names Volos, Amfissa, Agrinio, Stylida, and Atalanti all belong to the Conservolia variety. This is the large, oval olive which accounts for a large part of the table olive production in Greece. It starts off a rich dark green when it is unripe and changes into a whole spectrum of different colors as it matures: greenish-yellow, greenish-red, mahogany, and finally, dark, bluish-black. Conservolia is the most versatile Greek olive, processed with equal success as

both a green and black olive.

03.Tsakistes

These generally belong to the Megaritiki variety and colloquially are called tsakistes, or "cracked." Tsakistes grow mainly in Attica. They are almost always cured as a green olive, often flavored with garlic and lemon wedges.

04. Wrinkled Black Olives There are many different wrinkled olives in the Greek larder. The best known is the throumba, closely associated with the island of Thassos in the northern Aegean. These are the wrinkled, reddishbrown, mealy olives that are left to ripen on the tree and are saltcured.

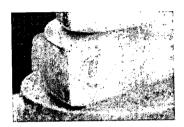

| 4 Greek Cheeses

Feta

Greeks are very particular about their Feta. Some like it soft and moist and rather mild, others prefer it as hard and crumbly as you can make it. Others want the distinct flavor of the goat-hide. Still others like their Feta to be lemony-sour. Although the differences are subtle, cheese shops and markets throughout Greece carry at least a dozen types from different parts of the country. The most striking display is barrel-aged Feta, glistening with whey in the barrel, and cut in neat triangular wedges.

Feta is arguably the best-known Greek food abroad. In 2004, the European Union granted Greek Feta a PDO (Protected Designation of Origin) status and issued a decree, prohibiting European countries other than Greece to use the name Feta. In Europe, similar cheeses are called "brined white cheese." Within Greece, Feta can be made only in specific regions: Macedonia, Thrace, Thessaly, Central Mainland Greece, the Peloponnese, and Lesvos.

Greek Feta production abides by very specific rules that control the manufacture and the allowed percentage of goat's milk in the cheese. Feta is made predominantly with sheep's milk, although a small percentage of goat's milk (up to 30%) can be added. Cow's milk is never used in the production of true Feta.

What to look for

Avoid domestically produced America feta cheeses, which are almost always made in an ersatz way, with cow's milk or with milk solids. These tend to be exceedingly salty. While texture varies from feta to feta, one telltale sign to help you discern the quality of the cheese is to press a little of it between your tongue and the roof of your mouth; if you get a grainy, almost floury feel on the palate, chances are the cheese has been made with milk solids. Real feta, whether sharp, mild, hard or soft, always has a creamy finish.

Other Greek Cheeses

Anthotyro [an-THO-tee-ro]

The word literally means "blossom" cheese, after the way the curds "blossom" as they are stirred, the curds rise to the tops of the vats and open in a shape resembling blooms. The cheese is similar to ricotta, but lightly salted. It is eaten fresh with jam or honey, and often baked into sweet pastries, especially around Easter time.

Graviera [Gra-vee-AIR-a]

One of the best table cheeses in Greece, produced in several areas. Graviera is generally a nutty, pale yellow cheese with a hard rind made either from sheep's milk or from cow's milk, depending on the region. Graviera, sweet, mellow, and nutty, is one of the most delicious Greek cheeses. The

sheep's milk gravieras come from Crete, Mytilene, Dodoni, Arta and Kalpaki. (Crete is actually the most famous graviera-producing region, and here one of the unusual ways to serve the cheese is with honey and walnuts.) Cow's milk graviera, which is yellower and a little creamier, is made mostly in Tinos, Syros, Naxos, Corfu, Larissa, and Serres.

Kasseri [Ka-SE-ree]

Kasseri is the most popular table cheese after feta. It is a mild, yellow, spun-curd cheese made from either ewe's or cow's milk.

Kefalograviera [ke-fa-lo-gra-vee-AIR-a] Another pale-vellow chees

Another pale-yellow cheese with a hard rind and an abundance of small air holes. As its name indicates, in both flavor and texture it falls somewhere between

graviera and Kefalotyri. It can range from sweet and mild to quite piquant. Kefalograviera is the cheese of choice for grilling and frying, but it can also be eaten as a table cheese.

Kefalotyri [ke-fa-lo-TEE-ree]

A very hard, light-yellow sheep's or goat's milk cheese with a sharp tangy flavor. The cheese is made mainly in Crete, as well as in Naxos, Cephalonia, Thessaly, and Epirus. It is a popular grating cheese.

Ladotyri [la-tho-TEE-ree]

Another unusual product, the name of which means "oil cheese." The cheese, which is shaped like miniature barrels, is steeped in olive oil and aged for several months. Lesvos is the most famous place in Greece for ladotyri and most of what is in the U.S. is

produced there. The cheeses is sharp, nutty and with a distinct, almost crunchy, texture. It's excellent as a table cheese.

Manouri [ma-NOO-ree]

This is a creamy, buttery mild white cheese that is sold in log-shaped loaves. It is excellent as a dessert cheese, topped with honey, or with poached fruits, and complements the sweet wines of Greece exceptionally well.

Metsovone [me-tsoe-VOE-ne]

This is a rich, hard, smoked yellow cheese made in Metsovo, Epirus. It resembles smoked Provolone. Metsovone is made in large sausage-like loaves, usually from raw cow's milk. It is delicious as a table cheese, but also is delicious fried (saganaki), as the local tavernas serve it-with a sprinkling

of paprika-and melted into cheese

Myzithra [mee-ZEE-thra]

The word dates to the l6th century, when it referred to a kneaded cheese. Myzithra is a feta byproduct. Traditionally the whey from feta is combined with some whole milk, and curdled for several days. The curds are collected, drained, lightly salted and pressed. Myzithra is sold either as a soft table cheese, or aged into rockhard balls and used as a grating cheese.

Greek Yogurt

Greek yogurt, called yiaourti, is thick and creamy, nothing like the runny commercial yogurts found in Western Europe and in the U.S. Yogurt has been a tradition in Greece, indeed throughout the Balkans, probably since the first itinerant shepherds tried to store milk in their goat skins only to find that the agitation and the heat had turned the milk into something else, sour, unusually refreshing, and delicious.

Traditional Greek yogurt is made either with sheep's milk or with goat's milk, although today cow's milk yogurt prevails in most supermarkets. There is unstrained yogurt, which is somewhat like the plain yogurt known to Americans, only a bit smoother in texture; and there is the strained, or strangismeno, yogurt which has the consistency of American sour

cream. It is available widely in the United States.

Avgotaraho

Avgotaraho is botargo, the pressed, sun-dried whole roe of certain types of fish. In Greece it is culled from the grey mullet, which goes to mate in the wetlands off the western coast of mainland Greece. The fish is trapped as it swims out to open sea to spawn, its egg sacs removed. Avgotaraho comes in small logs that have been dipped in beeswax to preserve it. It is a delicacy, savored sparingly, usually sliced into thin sheaths and served alone with a little olive oil, pepper and lemon or paired with dried fruits such as succulent Greek figs.

Greek Dried Herbs

In a country that boasts more than 300 days a year of sunshine, it stands to reason that the herbs, born of arid, mountainous but

often sea-sprayed terrain, are some of the most flavorful in the world. In the traditional Greek kitchen, most herbs are used in their dried form, which means an even more intense, concentrated flavor.

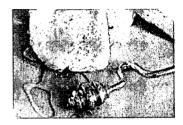

Among the most popular and easily accessible Greek herbs is Greek oregano, which is sweet and highly aromatic, with none of the bitter undertones one finds in oregano from California and Mexico, the two most commonly available types in the U.S.

Greek dried thyme, wild sage varieties, mint, and more are some of the dried herbs culled from the sun-drenched Greek landscape that are now available in the U.S. Teas and tisanes, especially unusual varieties of mountain sage, are also available.

20

Greek Farmed Fish Greece, with its seemingly endless coastline, is ideally suited to the farmed fish industry, and the industry, although relatively new, is vibrant and works harmoniously within the country's natural environment. With annual production of around 100,000 tons and sales turnover of 460 million Euros, mariculture is now the country's second biggest export sector. Greece is the world's leading exporter of Mediterranean sea bream and sea bass., Greek producers are developing new species like turbot, blue-fin tuna, and octopus, as well as improving processing facilities for smoked, canned, and filleted fish.

Greek Honey
The quality of Greek honey
remains as stunning today as it has
been throughout time. There is
good reason: Greece's countryside

continues to yield an unrivaled variety of vegetation. Most of the plants from which Greek bees gather are wild and sun-baked until their flavors maximize. (In most other honey-producing countries, bees feed off cultivated monocultures.) Greek honey also undergoes a minimum or processing, therefore retaining all the nutrients, flavor, and texture dictated by nature.

In the incredibly rich and varied Greek flora, there are at least 120 different flowering plants and trees that provide fodder for Greek bees, and theoretically just as many different types of honey, but only a handful are commercially viable. Among them: dark, thick pine and fir honey, orange-blossom and flower-blossom honey, heather, and, of course, arguably the best-known of all, thyme honey.

Chios Mastiha

Chios Mastiha, which most people might know as gum mastic, is a unique, appellation-of-origin product that is produced only on the island of Chios, in the eastern Aegean.

Chios Mastiha, a strange but beguiling crystal that flavors Greek cakes and breads, an ouzo-like liqueur, and a chewing gum is also used in making an impressive catalogue of potions and lotions that seem to be good for whatever ails you. It is salutary for all sorts of stomach ailments, including ulcers, and chewing it is good for the gums.

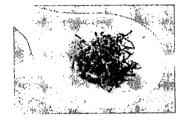

It is sold in many different forms. When used as a spice, it is probably best to buy the crystals, which keep their flavor as all whole spices do, and grind them according to need. The crystals should be

ground in a mortar with a pestle with the addition of a little salt or sugar, to keep them from sticking.

Roasted Red Peppers from Florina

These are long fleshy, thin-skinned peppers from Florina and other northern Greek environs that are surprisingly mild when fresh, but change dramatically when grilled.

Grilled or roasted, the famed red peppers of Florina, in Northern Greece, impart a wonderful, sweet fragrance, one of the telltale signs of the rustic cooking of western Macedonia. Their robust flavor, ruby-red color and glossy sheen make them one of the most renowned local products. Greek food manufacturers now produce excellent quality grilled Florina peppers, put up either in brine or olive oil.

Kozani Red Saffron Greece is one of the world's major producers of saffron, which is called Krokos Kozanis, after the wispy purple crocus flower from which the crimson stigmas are culled. The crocus flower has been cultivated in Kozani for two centuries, although saffron is a spice indigenous to Greece for thousands of years. It was esteemed by the ancient Greeks and highly valued during the Byzantine era. Greek saffron/krokos is renowned for the density of its color, the main factor in

Greek Pasta

There are, indeed, dozens, if not more, different traditional Greek pastas, and certainly dozens of ways to cook them. Some are truly unusual.

determining saffron's quality.

Most Greek pasta traditionally was

made and dried at the end of the summer. Among the most common, and most widely available today, are the Greek hilopites. These are noodles that come in two basic shapes: small squares or thin, fettuccine-like strands.

Trahana

Trahana is a granular grain product made with either semolina or wheat flour, or bulgur or cracked wheat, mixed with either milk (sweet trahana), or yogurt or buttermilk (sour trahana). The mass is broken up into smaller pieces which are dried outdoors at the end of summer in the scorching, arid Greek heat. The product is one of the most captivating in the whole Greek larder, extremely versatile and flavorful. It may be used in soups, stuffings, pilafs, and creamy risotto-type dishes, blended to a silky puree.

Spoon Sweets Called glyka tou koutaliou in Greece, spoon sweets, the colorful preserves of fruits, nuts, and some vegetables put up in sugar syrup, are age-old hallmarks of Greek hospitality and deliciously versatile products with applications way beyond dessert in the international kitchen. These preserves are made in every season: delicately threaded orange peels, bergamot, citron, lemon, and bitter oranges in winter, apricots, cherries, and immature nuts such as walnuts and pistachios in late spring and early summer, sour cherries, sweet cherries, watermelon rind, pumpkin, even tiny eggplants and whole tomatoes in summer and early fall. They match well with cheese and yogurt; some creative chefs are using them in sauces and marinades, too.

24 Wines and Spirits

Ouzo

Ouzo is the national spirit of Greece, an anise-scented liqueur that turns pearly white when ice or water is added to it. It is the de riguer accompaniment to meze and other savory treats. The spirit is made from at least 30% grape residuals. Although the main flavor component of ouzo is anise, the range of aromatic nuances in the drink may derive from a whole host of other spices, such as: fennel and anise seeds, star anise, coriander seeds, cloves, Mastiha, even rosemary. The final flavor of ouzo is a reflection of each producer's individual preferences and recipe. There are sweet ouzos and dry ouzos and a whole spectrum in between.All of them are well-suited to the robust flavors of typical Greek mezedes.

25 Greek Wines

About, Greek Wines Wine is one of the oldest products of the Greek earth. The vine is basic to Greece's agricultural traditions, and it has always flourished -literally- in the same area as wheat and olive trees, an agricultural trinity whose roots are lost in time.

Today, the wine industry is one of the most vibrant and progressive in Greece. The country produces wines with great regional diversity. Island wines are highly distinct from those produced in Greece's mountainous regions and in inland valleys.

Arguably, though, the most promising aspect of the entire Greek wine-making landscape is the country's singular range of indigenous grapes. The world wine market is dominated more and more by varietal-driven, as opposed to terroir-driven, wines.

That's great news for Greek wines. There are more than 300 local grape varietals that are exclusively Greek many of which have existed by the same name since antiquity. These lend a specific, unique identity to Greek wines and a point of differentiation, which is their greatest selling point. International grape varieties have also adapted well to the Greek growing environment, and Greece offers an excellent range of varietal wines made from international grapes as well as some beguiling blends with native grapes.

There are 28 appellation of origin vineyards in Greece and 80 areas designated as Vin de Pays. Greek wines are food-friendly; wine has always been part of the Greek table and an integral part of Greek gastronomy. Because of their aromatic qualities, though, many of our wines may also be drunk as aperitifs.

Whites

The Greek white varieties display an array of floral and fruity aromas with crisp, clean, mineral flavors. They have wonderful acidity that goes well with a variety of international cuisines. Producers largely support the new trend away from the over-oaked whites that have dominated the international wine scene.

Reds

The red varieties show character and typicity and are not overly manipulated. The native red varieties combine fruit and earthy aromas with firm acidities that lend themselves to the production of many different styles of wine that range from fresh, pleasing aromatic reds and rosés to extraordinarily complex, full-bodied red wines with long aging potential.

Dessert wines

Greeks have been producing world-class sweet wines since ancient times and continue to produce outstanding dessert wines that still rival the best from around the world.

To put it simply: There is something new to be discovered in the world's oldest wine-making tradition.

Major Greek Grape Varieties White Skinned Grape Varieties

Assyrtiko [a-SEER-tee-ko]

The finest Greek white variety and arguably one of the best in the Mediterranean. Planted in the volcanic soils of Santorini, it

produces wines with extract, body, mineral and acidity.

Athiri [a-THEE-ree] Grown widely in the Cyclades and Dodecanese islands. Quite soft and round.

Malagousia
[ma-la-ghoo-zee-A]
It can impress purely by its
remarkable character and
individuality. Wines are
characterized as intense, aromatic,
rich and complex.

Muscat Traditionally used for the production of sweet wines.

Robola [ro-BO-la] The most important grape the lonian Islands. It can produce

powerful, rich, alcoholic wines when ripe. Earlier harvesting can result in wines with a leaner palate, attractive lemony flavors and aroma.

Roditis [ro-THEE-tees]

Broad and rich, without any heaviness. Acidity is moderately low with aromas of white peaches and melon.

Savatiano [sa-va-tee-a-NO]

Greece's most widely planted white variety. It produces wines that are powerful, dense and aromatic.

Pink Skinned Grape Varieties

Moschofilero [mo-scho-FEE-le-ro] Light with vibrant acidity, floral aromas, and incredible elegance.

Red Skinned Grape Varieties

Aghiorgitiko
[a-gee-or-GEE-tee-ko]
Closely associated with Nemea in the Peloponnese, it produces a huge variation in styles ranging from fresh young reds to dark, complex, oak-aged wines rich in tannins with intense fruit character, spicy aromas, soft texture with an underlying bright acidity.

Kotsifali [ko-tsee-FA-lee] Mainly planted in Crete. It has the ability to attain high sugar levels with low acidity.

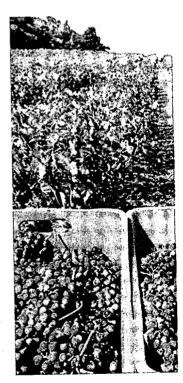

Limnio

[lee-mnee-O] It produces full bodied wines with high alcohol.

Mavrodaphne [ma-vro-DAF-nee] Planted in Northwest Peloponnese and Ionian Islands, the "black laurel" grape, as it 's name translates, is deeply colored, with intense aromas.

Xinomavro

[xee-NO-mav-ro]
It can produce wines of great
character, breathtaking complexity
that have the ability to age well and complement a wide range of foods.

First Annual Christmas Press Party

More than 30 U.S. journalists and media people, representing print and electronic media that included The Washington Post, Washington Times, New York Daily Post, Financial Times, National Geographic, Washington Diplomat, CBS, PBS, Pappas Telecasting, and Voice of America, as well as Greek correspondents in Washington, were hosted by Ambassador and Mrs. Alexandros Mallias at their residence, at the first annual Christmas press party, organized by the Press Office of the Greek Embassy on December 20, 2006

The sixty plus guests who attended this particularly warm holiday gathering included State Department press officials, as well as representatives of the Union of Mastic Gum Producers of Chios, who supported the event in collaboration with the Hellenic Trade Board, whose Chief Executive Officer, Mr. Panagiotis Drossos, also attended.

Mastic was highlighted during the evening with recipes, a brief presentation and gifts that featured the "healthiest spice in the world."

The Embassy of Greece Press Office looks forward to establishing this as an annual event that brings together media representatives in an informal holiday setting.

About Loukoumi

small squares and coated with confectioners' throughout Greece. It is made from gelatin or rubbery-textured candy is extremely popular Chopped almonds, pistachio nuts, pine nuts of the so-called "Turkish Delight". This powdered sugar is the Greek version Once the candy becomes firm, it is cut into cornstarch, sugar, honey and fruit juice or oukoumi, a chewy candy dusted in elly, and is often tinted pink or green. or hazelnuts are frequently added.

oukoumi must be 99% sugar and it is packed in powdered sugar just in case it wasn't sweet enough to begin with.

The best loukoumi it is produced in the Cycladic island of Syros, where its preparation is a real art. Not only Many Greek industries of the confectionery sector produce the same traditional loukoumi in large quantities by Syros produces loukoumi, but one can find this traditional candy in the whole of the country using the same raw materials in its preparation.

Loukoumi is an important export product of Greece and can be found in candy shops and supermarkets throughout the world.
