Docket No.: MOC-005

AMENDMENTS TO THE CLAIMS

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims

1. (Currently amended) A computer-implemented method comprising:
with a first device, receiving a message from a second device, wherein the message relates to joining a group;
based on receiving the message from the second device, participating in the group, wherein participating in the group includes sending first location information to a server and receiving second location information from the server, the first location information comprising a location of the first device, the second location information comprising a plurality of locations of a respective plurality of second devices included in the group;
presenting, via an interactive display of the first device, an interactive map comprising a plurality of user-selectable symbols corresponding to the plurality of second devices, wherein the symbols are positioned on the map at respective positions corresponding to the locations of the second devices; and
identifying user interaction with the interactive map selecting one or more of the user-selectable symbols corresponding to one or more of the second devices and user interaction with the display specifying an action and, based thereon, sending using an Internet Protocol to send data to the one or more second devices via the server,
wherein the first device does not have access to respective Internet Protocol addresses of the second devices.
2. (Previously presented) The method of claim 1, wherein the data includes a short message service message, a text message, an image, or a video.
- 3-7. (Canceled)
8. (Previously presented) The method of claim 1, wherein the first device is a personal digital assistant (PDA) or a personal computer (PC).

3

Docket No.: MOC-005

9. (Previously presented) The method of claim 1, further comprising:
sending, from the first device, a request for a second map, wherein the request specifies a map location; and
receiving, from the server, the second map.
10. (Canceled)
11. (Previously presented) The method of claim 1, wherein the map is a satellite image.
12. (Previously presented) The method of claim 1, further comprising sending, by the first device, updated location information comprising an updated location of the first device, the updated location information being sent based on passage of a predetermined time interval since sending previous location information comprising a previous location of the first device, displacement of the first device by a predetermined distance relative to a previous location of the first device, or both.
13. (Currently amended) A system comprising:
a first device programmed to perform operations comprising:
receiving a message from a second device, wherein the message relates to joining a group;
based on receiving the message from the second device, participating in the group, wherein participating in the group includes sending first location information to a server and receiving second location information from the server, the first location information comprising a location of the first device, the second location information comprising a plurality of locations of a respective plurality of second devices included in the group;
presenting, via an interactive display of the first device, an interactive map comprising a plurality of user-selectable symbols corresponding to the plurality of second

devices, wherein the symbols are positioned on the map at respective positions corresponding to the locations of the second devices; and

identifying user interaction with the interactive map selecting one or more of the user-selectable symbols corresponding to one or more of the second devices and user interaction with the display specifying an action and, based thereon, sending using an Internet Protocol to send data to the one or more second devices via the server,

wherein the first device does not have access to respective Internet Protocol addresses of the second devices.

14. (Previously presented) The system of claim 13, wherein the data includes a short message service message, a text message, an image, or a video.

15-19. (Canceled)

20. (Previously presented) The system of claim 13, wherein the first device is a personal digital assistant (PDA) or a personal computer (PC).

21. (Previously presented) The system of claim 13, wherein the operations further comprise: sending a request for a second map, wherein the request specifies a map location; and receiving, from the server, the second map.

22. (Canceled)

23. (Previously presented) The system of claim 13, wherein the map is a satellite image.

24. (Previously presented) The system of claim 13, wherein the operations further comprise sending updated location information comprising an updated location of the first device, the updated location information being sent based on passage of a predetermined time interval since sending previous location information comprising a previous location of the first device,

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
