(57) **ABSTRACT**

A method, a combined cellular, PDA communication device and system having specialized software applications for allowing a plurality of combined cellular phone/PDA device users to monitor each others' locations and status, to initiate cellular phone calls by touching a symbol on the touch screen display with a stylus which can also include point to call conferencing calling. Each participant's cellular phone/PDA device includes a GPS navigation receiver with application software for point to call cellular phone initiation to participants and geographical entities including vehicles, persons or events, conference calls and video transfers. The method, device and system also includes several features that allow each individual cell phone to poll the network participants to create a network of participants who have symbols displayed on each user's PDA display screen and providing application software in each cell phone with a server to allow individual users to create, by polling the network, a group of network participants having a common interest, or a network of friends and family for a network of all active participants. The method, device and system employed herein can also be used to establish an anonymous dating service that allows individual participants using their cell phones to identify and contact others for dating or social interaction without giving away their actual name and phone number.
