Alexandria, VA 22313-1450

SUPPLEMENTAL RESPONSE

In connection with the Request for Continued Examination (RCE) filed in the above-identified patent application on February 26, 2016, and further to the Amendment and Response filed therewith, the following Supplemental Response is respectfully submitted.

In the Amendment and Response filed on February 26, 2016, the markings to show the changes to the amended claims were inadvertently omitted. Accordingly, Applicant submits herewith a Supplemental Response, which includes a listing of the claims with markings to show the changes to the amended claims. For the Examiner's convenience, the "Remarks" section of the Response of February 26, 2016, is also submitted herewith.

Please amend the above-identified U.S. patent application as follows:

Amendments to the Claims are reflected in the listing of claims which begins on page 2 of this paper.

Remarks begin on page 13 of this paper.

Docket No.: MOC-003

AMENDMENTS TO THE CLAIMS

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims

1. (Currently amended) A method comprising:
performing by a first device:
 - obtaining contact information of a plurality of second devices;
 - ~~obtaining Internet Protocol (IP) addresses of the second devices, wherein~~
~~obtaining the IP addresses comprises receiving short message service (SMS) messages~~
~~from the respective second devices;~~
 - initiating discovery of an Internet Protocol (IP) address by using the contact
information to send, to the second devices, respective Short Message Service (SMS)
messages including information for facilitating Internet Protocol (IP) based
communication between the first device and the respective second devices;
 - receiving respective IP-based responses to the SMS messages, wherein the IP-
based responses to the SMS messages include location information of the respective
second devices;
 - ~~transmitting IP-based messages including a location of the first device to the IP~~
~~addresses of the respective second devices;~~
 - ~~obtaining location information of the second devices;~~
 - presenting, via an interactive display of the first device, an interactive map
comprising a plurality of user selectable symbols corresponding to the plurality of second
devices, wherein the symbols are positioned on the map at respective positions
corresponding to the respective locations of the second devices; and
 - identifying user interaction with the interactive map selecting one or more of the
user-selectable symbols corresponding to one or more of the second devices and user
interaction with the display specifying an action and, based thereon, sending data to the
one or more second devices.

Docket No.: MOC-003

2. (Previously presented) The method of claim 1, further comprising:
presenting another symbol on the interactive map corresponding to a fixed location and associated with a telephone number; and
receiving user selection of the other symbol and, based thereon, initiating a telephone call to the telephone number associated with the symbol.

3. (Currently amended) The method of claim 1 wherein the data comprises a text message, ~~an image, a video, or a command to cause the second devices corresponding to the selected symbols to convert text to speech, an image, or a video.~~

4. (Currently amended) The method of claim 1 wherein ~~obtaining the IP address of a particular second device comprises:~~
~~sending an SMS message to the particular second device wherein the SMS message comprises the SMS messages include~~ an Internet Protocol (IP) address of the first device; and
~~receiving a response from the particular second device comprising an IP address the IP-based responses include respective IP addresses of the second device devices.~~

5. (Currently amended) The method of claim 1, further comprising: sending geographic location information of the first device to one or more of the second devices based on time and / or movement.

6. (Previously presented) The method of claim 1, further comprising:
receiving second user selection of one or more of the symbols; and
receiving user input assigning the one or more second devices corresponding to the second selected one or more symbols to a sub-net.

7. (Previously presented) The method of claim 6, further comprising:
receiving user selection of the sub-net; and
establishing a conference among the one or more second devices of the sub-net for sharing voice, text, photographs, or video communications.

Docket No.: MOC-003

8. (Original) The method of claim 1, further comprising:
- identifying user interaction with the display specifying a new symbol and a location of the new symbol;
 - presenting the new symbol on the map at the specified location; and
 - sending the new symbol and the location to the second devices wherein each of the second devices is configured to present the new symbol on an interactive map at the specified location.
- 9-10. (Canceled)
11. (Currently amended) A system comprising:
- one or more computers programmed to perform operations comprising:
 - obtaining contact information of a plurality of second devices;
 - ~~obtaining Internet Protocol (IP) addresses of the second devices, wherein obtaining the IP addresses comprises receiving short message service (SMS) messages from the respective second devices;~~
 - ~~initiating discovery of an Internet Protocol (IP) address by using the contact information to send, to the second devices, respective Short Message Service (SMS) messages including information for facilitating Internet Protocol (IP) based communication between the first device and the respective second devices;~~
 - ~~receiving respective IP-based responses to the SMS messages, wherein the IP-based responses to the SMS messages include location information of the respective second devices;~~
 - ~~transmitting IP-based messages including a location of the first device to the IP addresses of the respective second devices;~~
 - ~~obtaining location information of the second devices;~~
 - presenting, via an interactive display of the first device, an interactive map comprising a plurality of user selectable symbols corresponding to the plurality of second devices, wherein the symbols are positioned on the map at respective positions corresponding to the respective locations of the second devices; and

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
