(57) **ABSTRACT**
 A method and system includes the ability for individuals to
 set up an ad hoc digital and voice network easily and rapidly
 to allow users to coordinate their activities by eliminating
 the need for pre-entry of data into a web or identifying others
 by name, phone numbers or email. This method is especially
 useful for police, fire fighters, military, first responders or
 other emergency situations for coordinating different orga-
 nizations at the scene of a disaster to elevate conventional
 communication problems either up and down the chain of
 command or cross communication between different emer-
 gency units. The method and system provides that the users
 are only required to enter a specific Server IP address and an
 ad hoc event name, a password and perhaps the name of the
 particular unit.
