Subject: Re: AGIS - HTC's source code

Miguel,

We are disappointed that you would not extend the professional courtesy of expediting Mr. Vijh's clearance.

Omid Kia will review the code on October 3rd (and October 4th if necessary to review code for "dozens of accused products"). You raised no objection to his disclosure in August.

Since we notified you of our intention to use source code to examine the witness in advance of 3 days before of the 10/5 deposition, you are correct in that HTC (as the producing party) may choose to bring a source code computer or paper printouts.

Regardless of which option you elect for Friday, the production purportedly consists of HTC's own source code which (by your own repeated admissions) has been set aside as relevant to this case "for over fourth months." So not only is this HTC's code, but HTC knows specifically about its relevance to this case and has known about it for "nearly half a year." There is simply no excuse for HTC's corporate designee on technical topics to lack the knowledge and preparation necessary to testify about HTC's own source code, and we expect that the witness will be prepared to offer meaningful and substantive testimony to that end.

Regards,
Enrique

Subject: RE: AGIS - HTC's source code

Enrique,

On October 1st, for the first time AGIS identified Mr. Vijh as an expert in this case. Prior to that date, AGIS had not disclosed him to HTC nor provided a copy of his CV, nor had Mr. Vijh signed an undertaking to be bound by the protective order in this case as evidenced by the October 1, 2018 date on his undertaking. Plainly put, prior to October 1st, we had no idea who Mr. Vijh was or that AGIS was attempting to use him as an expert.
