# Expanding our Fort Worth Data Center to five buildings

*By KC Timmons, Site Manager, Fort Worth Data Center*

In July 2015 we **broke ground** on the first phase of our data center in Fort Worth — one building and an admin space. Since then we've had an average of 950 workers on site every day, logging more than 1.7 million hours of work on the project. We're now starting to roll racks of servers into the first building, and we couldn't be more impressed with the fast pace of the teams working on this project.

We want to build on this strong momentum, and today we're thrilled to announce that we plan to expand our Fort Worth data center to five full buildings over the course of the next few years, and invest in the necessary supporting infrastructure. We've already started work on a second building, and we'll break ground on a third next year. We expect this expansion to keep our construction crews busy for years to come, and to add to the more than 120 full-time employees we already have on site.

This expansion comes as more people around the world use Facebook apps and services every day, and as video becomes even more central to the way people connect and share with each other. With this expansion, our Fort Worth data center will play an even more important role in making that possible.

And, of course, the facility will be powered by 100% renewable energy, thanks to the more than

Our appreciation goes out to the Fort Worth community, our partners, and our employees for their continued support. We're proud to call Fort Worth our home.
