IS-300 Pro Precision Motion Tracker

THE WORLD'S FASTEST AND SMOOTHEST HEAD AND HAND ORIENTATION TRACKER.

Make slow, jittery virtual environments history. Now high-fidelity tracking with the ease-of-use, freedom and robustness of sourceless inertial technology is here. Enhance simulator performance and realism with the IS-300 from InterSense.

- **Fast & Smooth**
- **Motion Prediction**
- **Immune to Interference**
- **Unlimited Range**

Fast Response and Jitter Free

The InterSense IS-300 Pro supports the industry's fastest update rate of up to 500 Hz, for the world's lowest latency tracking. Tracker-induced lag is removed from your virtual environment.

Unlimited Range

The IS-300 Pro is completely sourceless. This means no setup, no line-of-sight constraints and virtually unlimited operating range. The signal processor is small enough to wear on a belt for tetherless application.

Motion Prediction

The IS-300 Pro predicts motion up to 50 ms in the future, compensating for graphics rendering delays and eliminating simulator lag. InterSense is the only company to employ the proven benefits of inertial angular rate and acceleration sensors to provide accurate feed-forward motion prediction.
