Attorney Docket No. 16326-701

**SERVER-GROUP MESSAGING SYSTEM
FOR INTERACTIVE APPLICATIONS**

**Inventors: Daniel Joseph Samuel
Marc Peter Kwiatkowski
Jeffrey Jackiel Rothschild**

FIELD OF THE INVENTION

The present invention relates to computer network systems, and particularly to server group messaging systems and methods for reducing message rate and latency.

Background of the Invention

There are a wide range of interactive applications implemented on computer systems today. All are characterized by dynamic response to the user. The user provides input to the computer and the application responds quickly. One popular example of interactive applications on personal computers (PCs) are games. In this case, rapid response to the user may mean redrawing the screen with a new picture in between 30ms and 100ms. Interactive applications such as games control the speed of their interaction with the user through an internal time base. The application uses this time base to derive rates at which the user input is sampled, the screen is redrawn and sound is played.
