SIP\_Docket@mwe.com

## DETAILED ACTION

### Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Art Unit: 1637

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 15-43 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-29 of U.S. Patent No. 7582420. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant claims 15-43 are drawn to a method for detecting different target nucleic acid sequence of interest in a sample in which the method comprises steps similar to those used in the method of claims 1-29 of 7582420. The differences are that the instant method of claims 15-43 comprises step (b) of contacting the sample with dNTPs and primers to obtain first extension products, and after the first primer extension, the rest of the steps are the same as steps (b)-(g) as recited in claim 1 of U.S. Patent No. 7582420. The specification of U.S. Patent No. 7582420 discloses first extension from target without immobilization (see column 3, lines 50-54, fig. 2). Therefore, the instantly claimed invention and the invention of claims 1-29 of U.S. Patent No. 7582420 have overlapping subject matter.

### **Claim Rejections - 35 USC § 103**

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various

Art Unit: 1637

claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 15, 21-22, 25-35, and 38-43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bhatnagar et al. (5593840, issued Jan. 14, 1997) and in view of Barany et al. (6,027,889, issued Feb. 22, 2000) and Hartley et al. (5,043,272 issued Aug. 27, 1991).

Bhatnagar et al. disclose a process for amplifying nucleic acid sequence from a DNA or RNA template. The process allows efficiently detecting a particular point mutation (See the abstract). The process provides primers comprising a first primer which is substantially complementary to first segment at a first end of the target nucleic acid sequence and a second primer, which is substantially complementary to a second segment at a second end of the target nucleic acid sequence and whose 3' end is adjacent to the 5' end of the first primer (see column 3, lines 11-18). The second primer (oligo 2) is extended and then ligated to the first primer (See fig. 3) to produce fused amplification products (See column 3, lines 31-34). The fused amplification products are amplified by a third primer (See column 3, lines 35-44). The allele is determined by detecting labeled oligonucleotide (see column 3, lines 64-65). The process also provides four different nucleotide bases (See column 3, lines 27). The amplified fused amplification products are detected by a detectable signal (See column 7, lines 8-22).

Regarding claims 25-26, Bhatnagar et al. disclose that one of the primers is comprised of a number of similar oligonucleotide sequences, one of which is exactly complementary to the

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

## API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

## LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

## FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

## E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
